Instructions on how to download music from Cloud
Select Download MP3

Click on **the three-dot icon** .

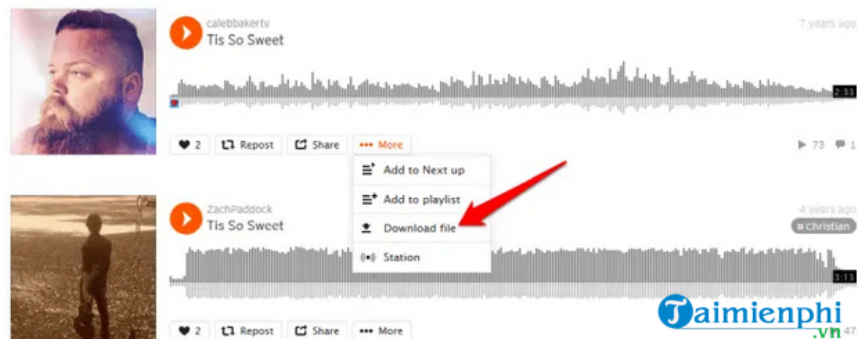

Select "**Download**" and wait for the download to complete.

2. Download music from the SoundCloud homepage.

If you're familiar with downloading songs from YouTube, downloading music from SCloud to your computer should be a simple process. Artists have control over whether or not their content can be downloaded on SCloud, and this is indicated by the "**Download file**" button you'll find below each track. You can also find it in the "**More**" option . Simply click or tap that button, and the song will be downloaded and saved to your device.

If there's no **Download** button , it means the artist or creator doesn't allow others to download music from Cloud to their computers. However, you can also find that content on third-party websites that allow free downloads. Some of these websites require you to register or create an account, or even log in with a social media account to download the content you want. The downside is that you probably won't use that website a second time, but your social media account may already be linked to it.

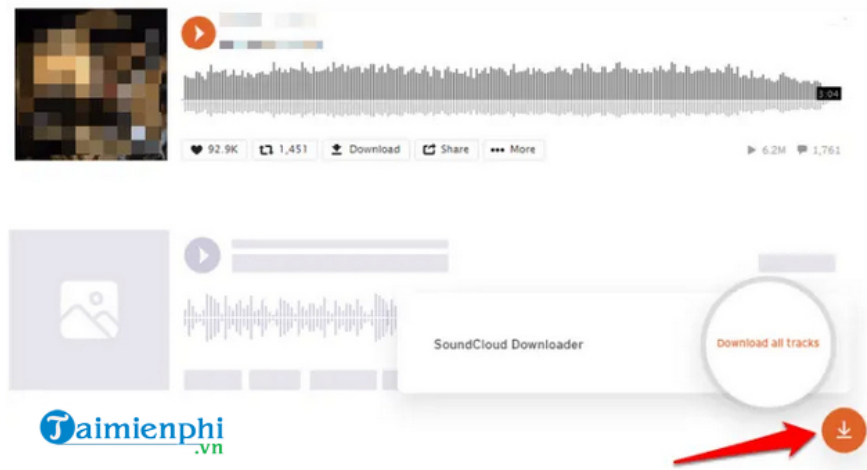

If you have a SCloud or SCloud Go+ subscription , you can download music from SCloud to your computer and mobile device to listen offline.

3. Download music from Cloud using a web browser.

You can download music from SCloud to your computer via the website after logging into your SCloud account by clicking the Download button. If the artists allow downloads, it means you – the listener – can receive a copy in the original file format of the song they uploaded to SCloud.

Users can also use extensions like SCloud Downloader to download and save their favorite songs. Such web browser extensions are available for free in the Chrome or Firefox stores, although they are often removed if they violate SCloud's terms of service.

To download music from SCloud to your computer, find the SCloud icon in your browser, paste the song's URL, and download the song from SCloud to your computer. Alternatively, find the download button on the SCloud website and click it to download the song you want.

SoundCloud is a good option for enjoying free online music. However, many other websites also offer similar services, from Spotify or Apple Music to Google Play Music and YouTube. It also allows you to listen to podcasts, audiobooks, and more. Any of the three methods listed above can help you download music from SoundCloud to your computer and enjoy your favorite songs and playlists on your PC.
