

# How to download offline maps on Apple Maps

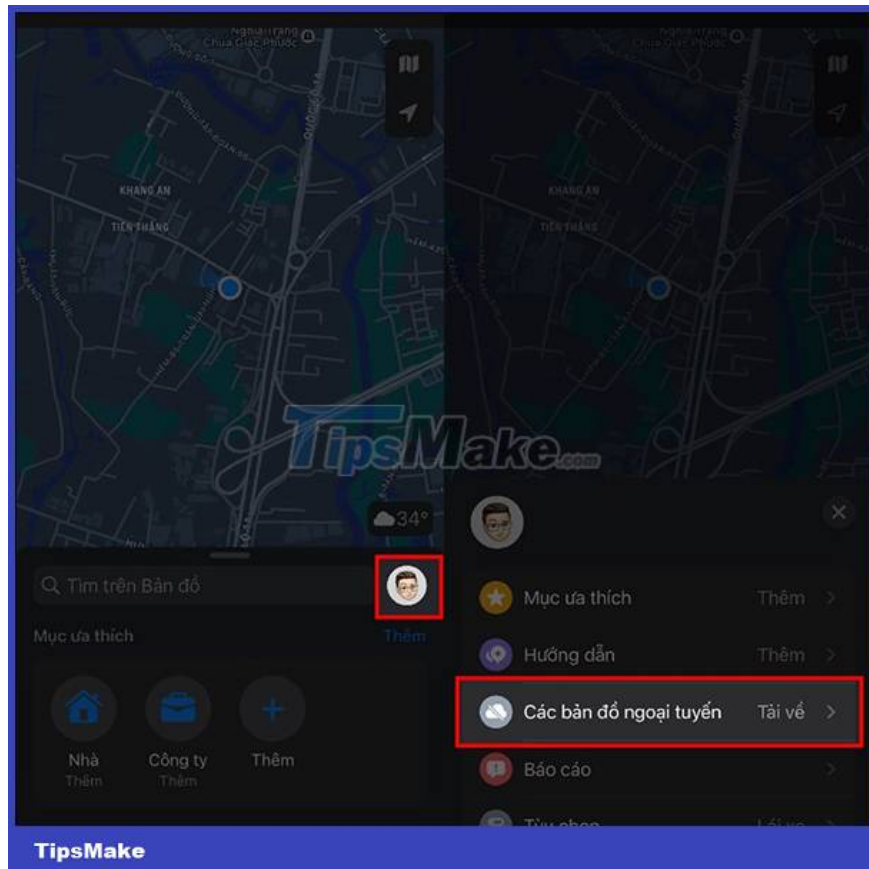

iOS 17 has an option to download offline maps on Apple Maps so you can easily look up directions when you can't connect to the Internet. Then you can easily search for places on the map without an internet connection.

iOS 17 has an option to download offline maps on Apple Maps so you can easily look up directions when you can't connect to the Internet. Then you can easily search for places on the map without an internet connection. So this offline map feature on Apple Maps is quite similar to offline maps on Google Maps. Users only need to download the map when there is a connection for offline use. The following article will guide you to download offline maps on Apple Maps.

## Instructions to download offline maps on Apple Maps

### Step 1:

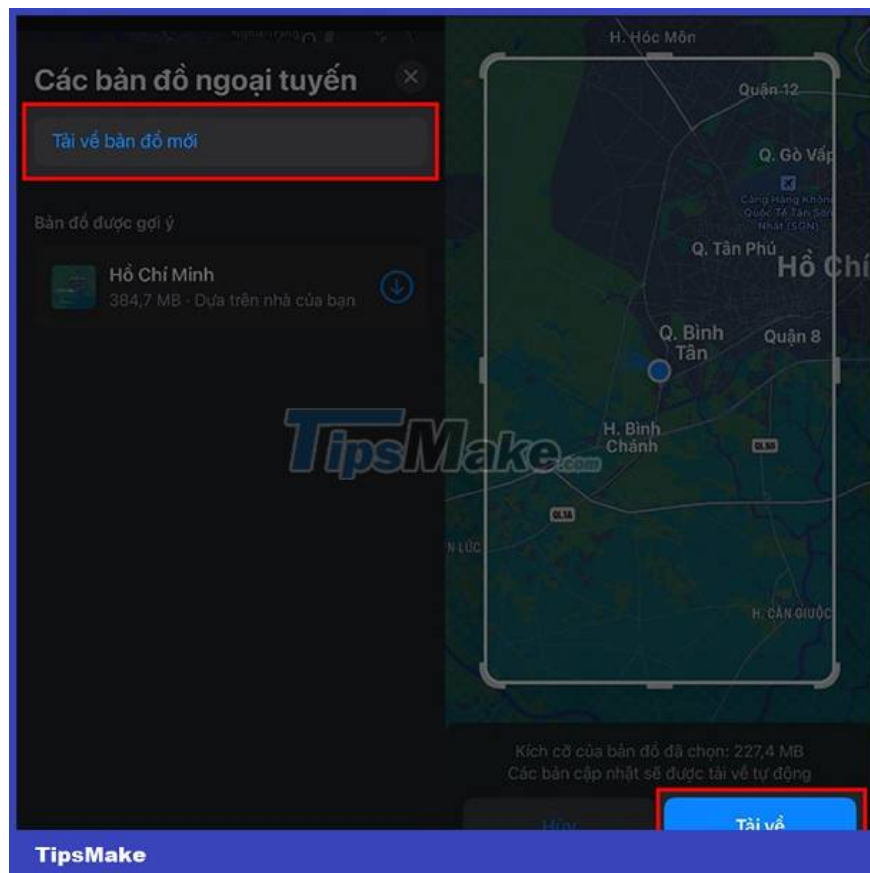

You open the Apple Maps application and then click on your **account avatar** . Display the options for the application, click the **Offline maps** option .

## Step 2:

Switching to the new interface, users **click on Download new map** to proceed to download the map on Google Maps. Now display the map for the user to select the location, the area where you want to download the map, can click the my location button to download the map near you or press to find the address you want.

We can adjust the small size of the map area you want to load to make it easier to see. After editing, **click the Download button** to save.

So when you're not using WiFi or data on your phone, just open this offline map to search for places you've previously saved.
