

How to download photos without copying on the Web to a computer?

On some websites, the Save as Image feature will be disabled so that users cannot download images to the computer. The method of taking screenshots and cutting each image will not be available with a large number of images, not to mention the image quality will be greatly reduced, ...

While surfing the Web, you may accidentally come across unique images, or images that serve your work and want to download them to your computer for use and share with friends. However, you cannot download them to your computer because the **Save as Image feature** has been completely disabled. The plan to **capture the entire website** and cut each image is not available with a large number of photos. Or you find a way to download the entire Web status and find the image you need in dozens of photos is not a good idea. Too time consuming.
