Why can't you download SPSS on Android phones and iPhones?

- SPSS software requires high computing capabilities and powerful system resources to process large data sets and perform complex analyses. Most mobile devices do not have enough RAM, CPU, and storage required to run these heavy tasks efficiently.
- SPSS has a complex user interface with many windows, menus, and options needed to perform detailed statistical analysis. Displaying and interacting with this interface on the small screen of a mobile device can be difficult and inconvenient.
- Most SPSS users are experts and researchers working in fields that require in-depth data analysis. So the need to use SPSS on mobile devices is very little, thus not motivating IBM (the company that develops SPSS) to invest in developing the mobile version.
