

# How to download the entire contents of a web page to your computer

How to download the entire contents of a web page to your computer If you want to download a whole section or even a certain website, you have to rely on the help of a dedicated software.

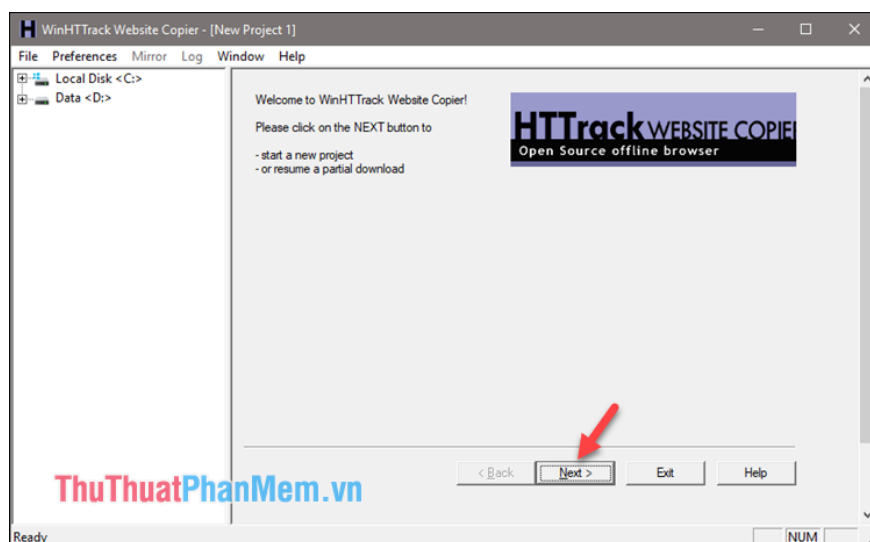

The Internet is becoming more and more popular, but computers are not always available to use the Internet. In this case, downloading the entire content of a website you like for entertainment and research is the best choice. TipsMake.com has a tutorial on saving websites to your computer for offline viewing in a browser, but that way you can only download an article of a website. If you want to download an entire forum or even a certain website, you need to rely on the help of a dedicated software. The following article of TipsMake.com will guide you to use the software to download the entire contents of a website to your computer, please follow along.

Currently on the market there are quite a lot of software that supports us to download websites to computers, but in this article we will introduce you to the software called **HTTrack Website Copier** because this is a website download software rated as the best today.

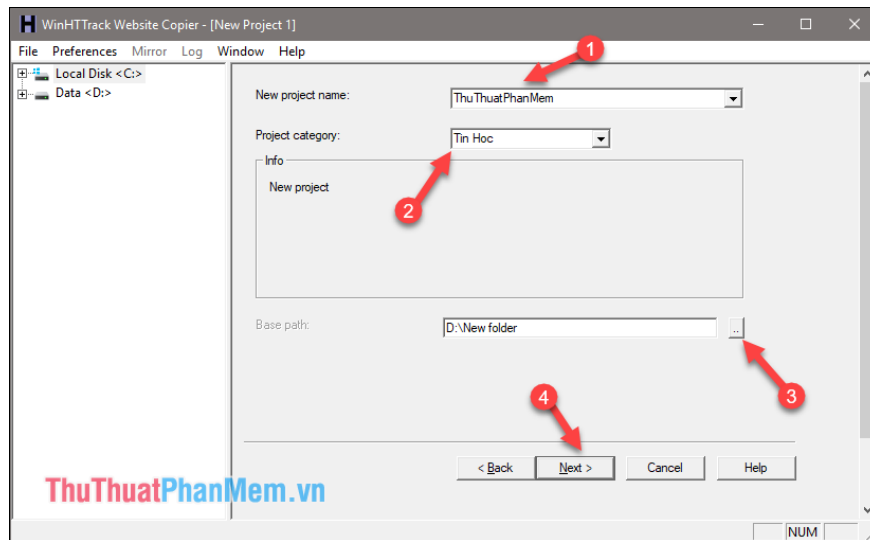

You can download the software at: <http://www.httrack.com/page/2/>

After downloading you install normally then launch the application up. And here are the steps to download a website using software:

**Step 1** : At the main interface of the normal software we will click **File -> New Project** to create a project to load a new website, but if it is the first time you use, just click **Next** .

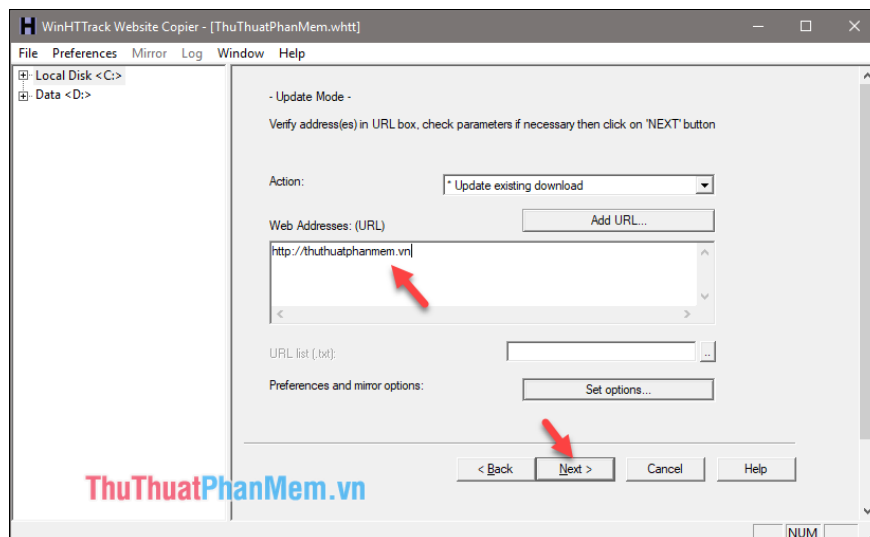

**Step 2 :** You enter the name of the site in the **New project name** , enter the category of the site in the **Project category** . Next you choose the directory to save the website and finally click **Next** .

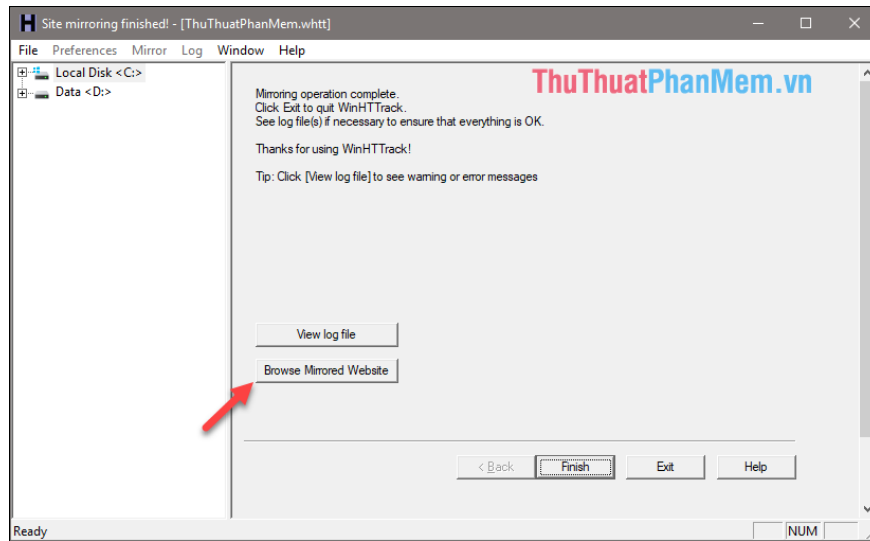

**Step 3 :** Enter the address of the website you want to download into the Web Addresses box.

**For example** , if you only want to download one article of a website, enter the address of that article. And if you want to download the whole site, enter the address of that website like <http://TipsMake.vn> for example. Note that downloading a whole site will take a lot of time because a website has thousands of articles.

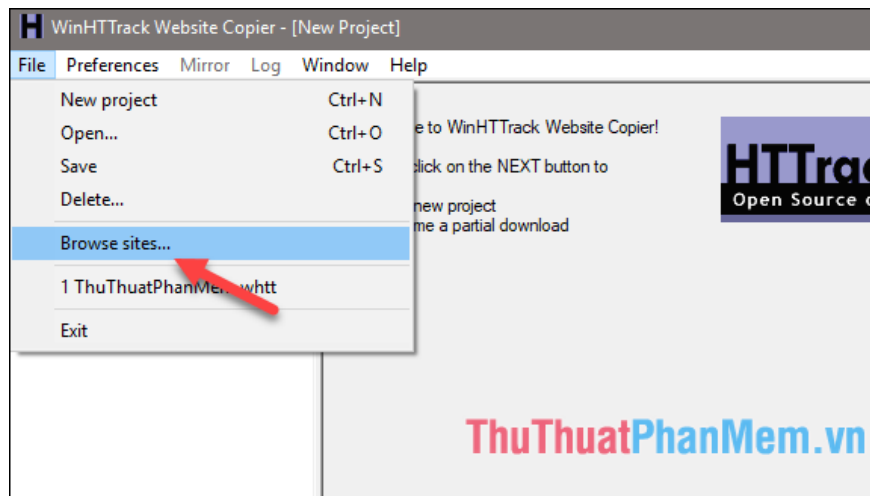

**Step 4 :** Next, click **Finish**

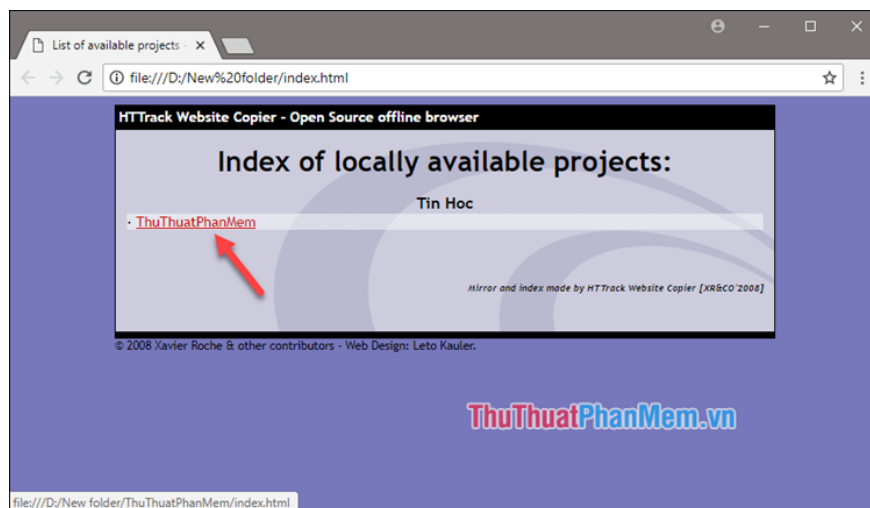

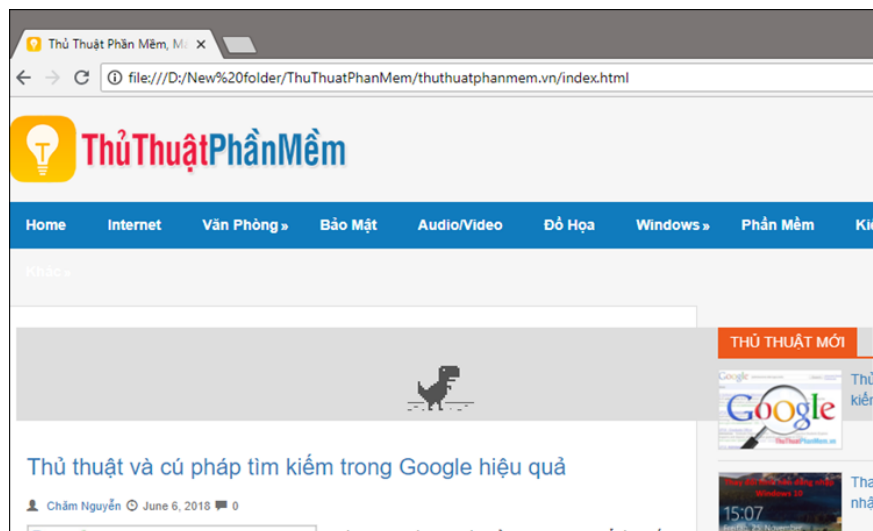

At later times if you want to open the website, choose **File -> Browse sites** .

Next select the site you downloaded:

And so we can view the website without the internet:

Above is an instruction on how to download the entire contents of a web page to your computer using the **HTTrack Website Copier** software . Thank you for watching the article, wish you success.
