

How to download the old version of Android application and block automatic update

How to return to the old version of the Android application? Using the old version may be more suitable for you than upgrading to a new version of the application.

Updating the application to the new version may not be necessary if you use the old version that feels stable, especially suited to the current capacity of the device. Not to mention quite a lot of applications after the update will appear more ads, increasing the amount of applications that occupy system resources but new features are not available. If so, you can turn the application to the previous version so as not to affect the system experience.

Besides, if users do not need to automatically update the application to the new version, turn off this feature. Thus, if there is a need to update certain applications, we will proceed manually. The following article will guide you to install the old version of the application and turn off the automatic update of Android applications.

1. How to turn off Windows Update on Windows 10
2. How to turn off the auto update feature on iPhone
3. How to turn off iPhone application notifications?

1. Install the old version of Android application:

To be able to install the old version of the application, we will install the APK file of the application. Currently there are many sources to download APK files of applications such as APKMirror, APK-DL, APK Downloader, .

Read the link to download the APK file details according to the article [How can I not download the application on Google Play Store?](#)

After downloading the APK file to the device, users need to agree to install the APK file, the application is unknown.

Access the **Settings** interface, select **Privacy** or Privacy, then **turn on Unknown sources** to allow application installation. If you receive a message click OK to agree to install. Finally, you just need to launch the APK file to use the old version of the application.

2. Turn off automatic updating of Android apps:

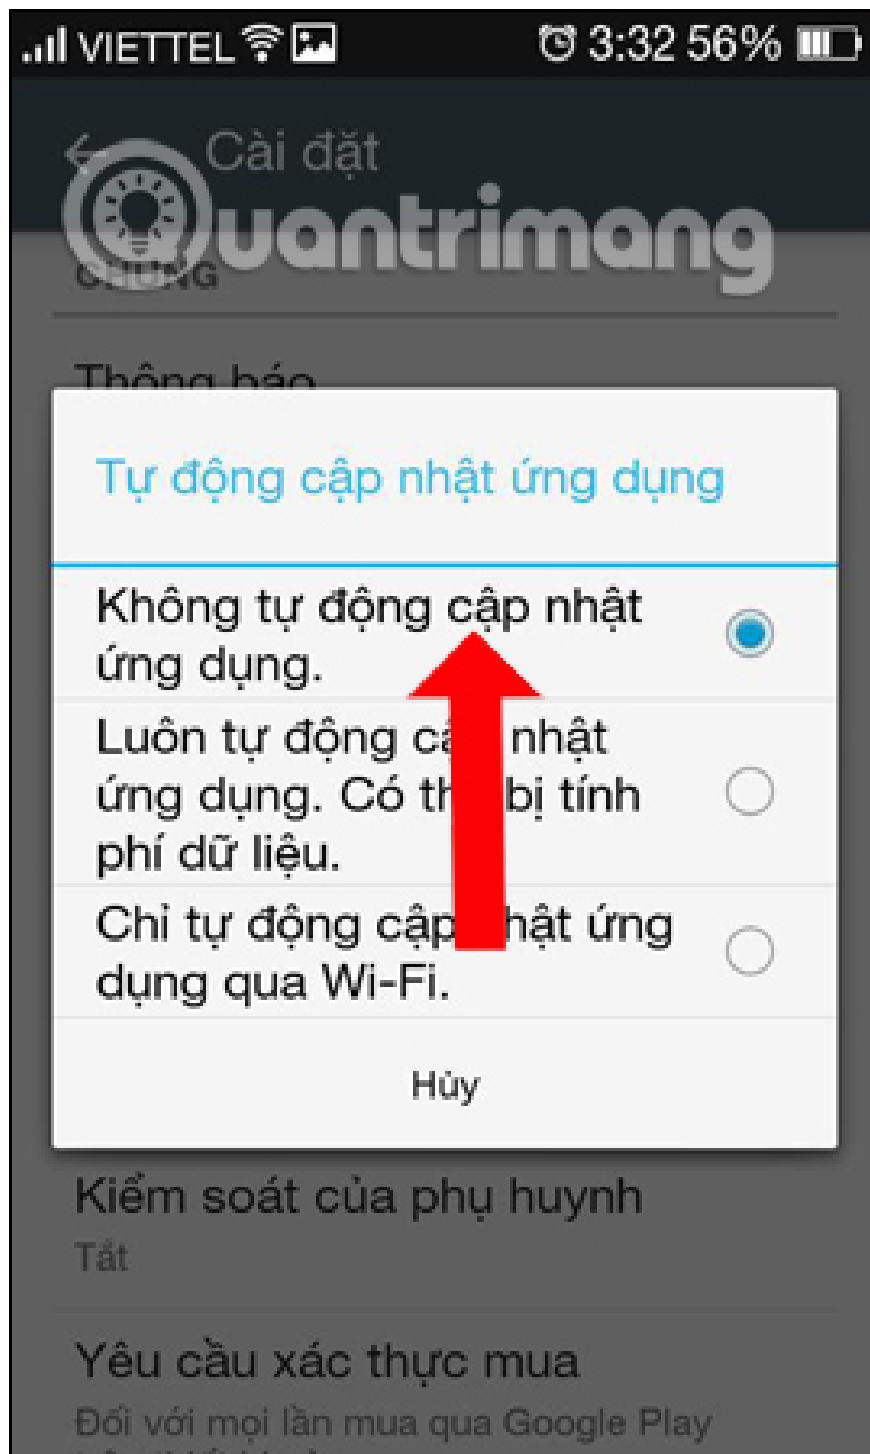

Turn off auto-update on CH Play

Often, many people will leave the default mode on CH Play which is automatically updated when the new version is announced. This is not necessary because you have difficulty controlling applications to the new version, especially with paid applications. So turn off the automatic update of the app on CH Play.

You go to the Google Play Store and then select **Settings** , then at the **Automatic update of the application**, select **Do not automatically update the application** .

How do you read how to do details in Turn off automatic updating of applications on Android?

Turn off application update notifications

After you turn off the automatic update of the application, if the Android device has WiFi or Internet data connection, we will still receive notification of how many application updates. If you are bothered by this message, you can turn them off.

Also at the Settings interface on CH Play store, click on the **Notifications** section. Then, **uncheck the 2 Updates and Automatic updates section** .
