

How to draw a frame around text using the Snipping Tool

Snipping Tool on Windows supports more features to help you take screenshots of your computer screen, such as drawing frames around text.

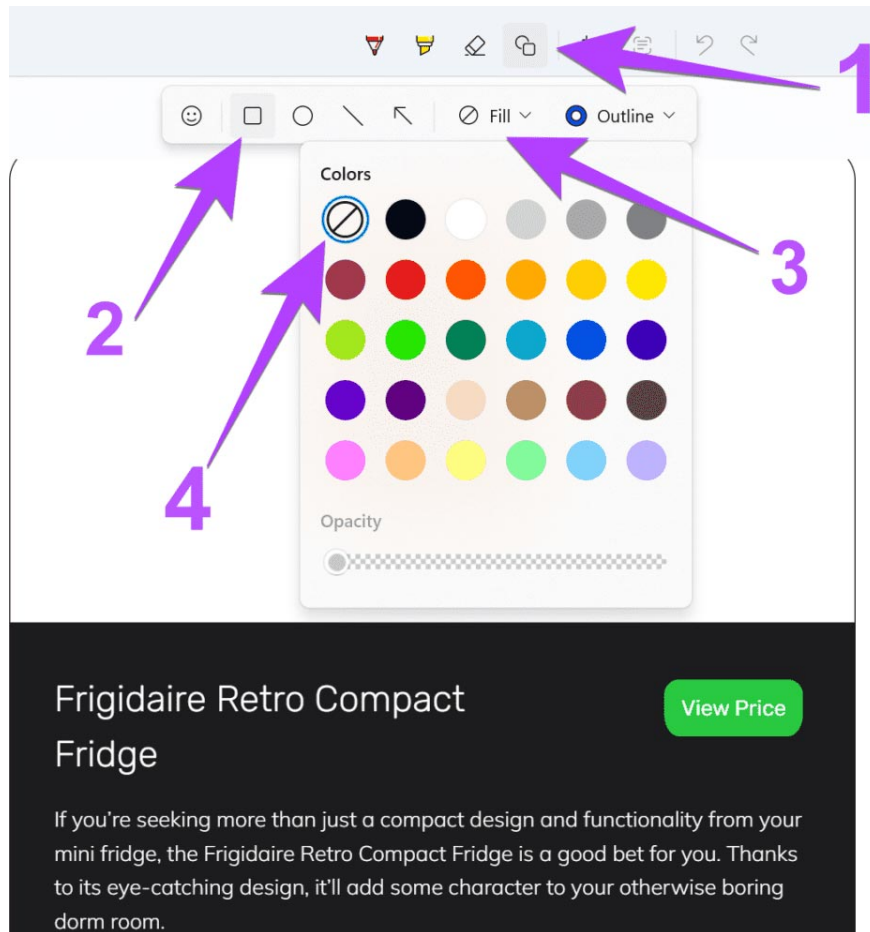

Then the content in the computer screenshot with the text frame is more noticeable, more prominent than other surrounding content. Below is a guide to drawing a text frame using the Snipping Tool.

How to draw a frame around text using the Snipping Tool

Step 1:

You **take a screenshot using the Snipping Tool** on your computer as usual. Next, click on **the cube icon** to open the shapes available in the Snipping Tool.

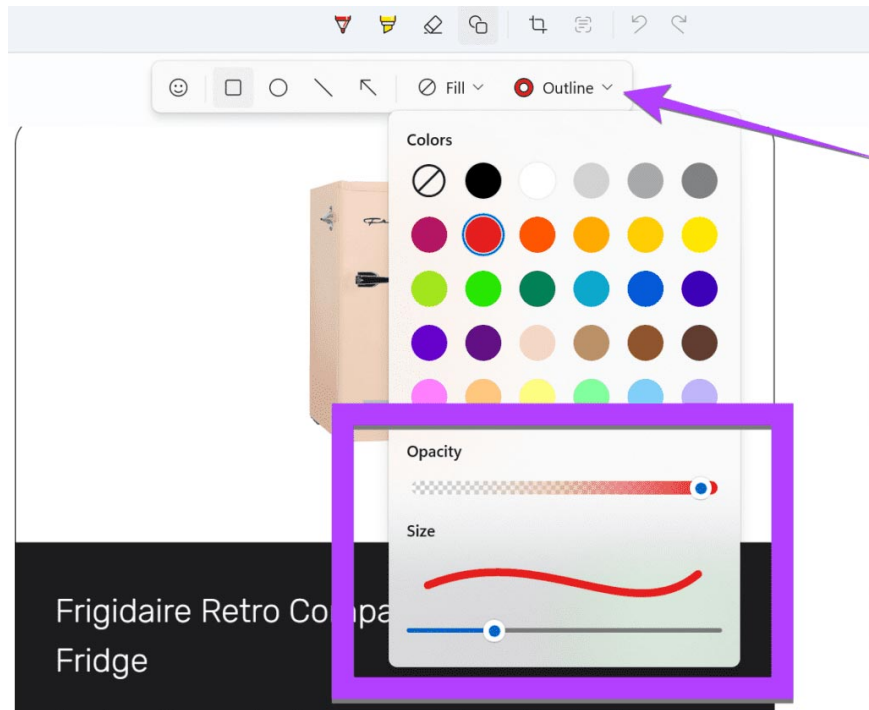

Here you **select the rectangle** , then **select the color** for the shape and **select Fill with a cross** to remove the background color of the shape.

Step 2:

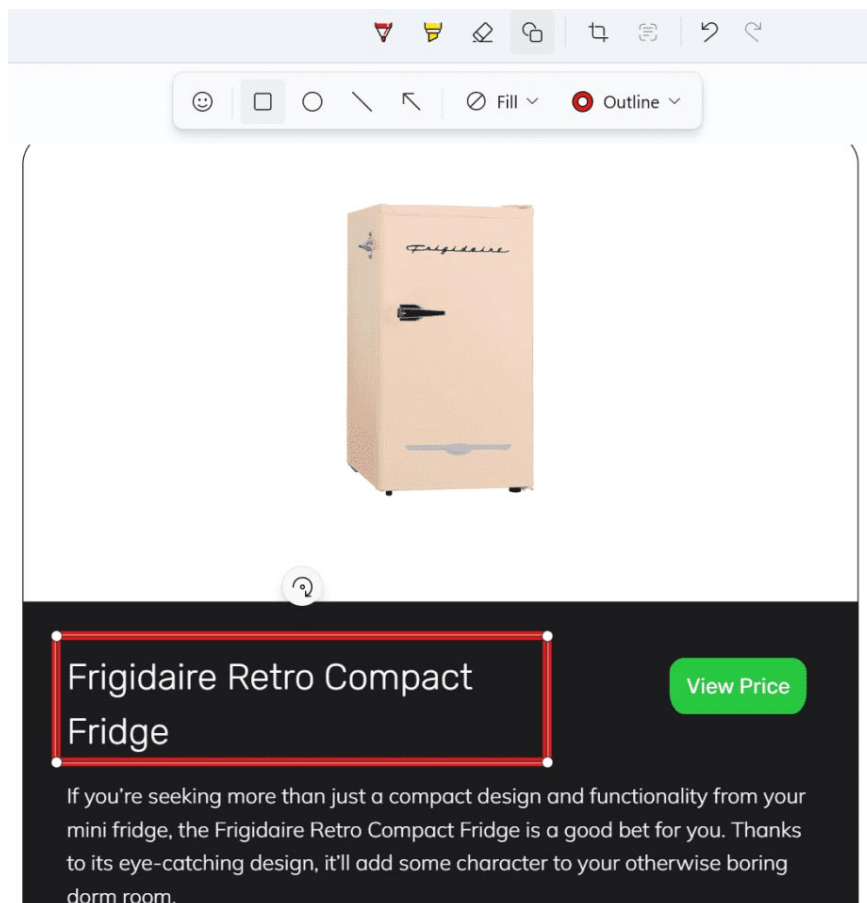

In the custom interface for the frame, **click on Outline** and **select red** or other color you want.

Below are the items to adjust the size of the frame via the Size bar and adjust the opacity using the Opacity bar.

Step 3:

Once you have set up the frame, simply **use your mouse to draw a frame around the text** or whatever content you want.

Step 4:

We press the key combination Ctrl + S or the save icon above to save the image with the text frame to the computer.
