The first skill to start creating in Photoshop is to draw a basic line. These basic lines will be the basis for the shape so that from that cube you create more complex details. Here Thuthuatphanmem.vn please guide you how to draw straight lines, basic curves in Photoshop, please refer.

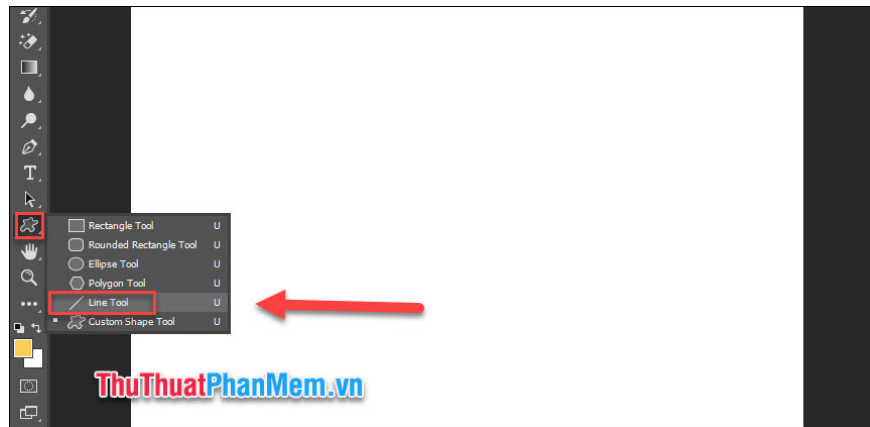

Here I use Photoshop CC version.

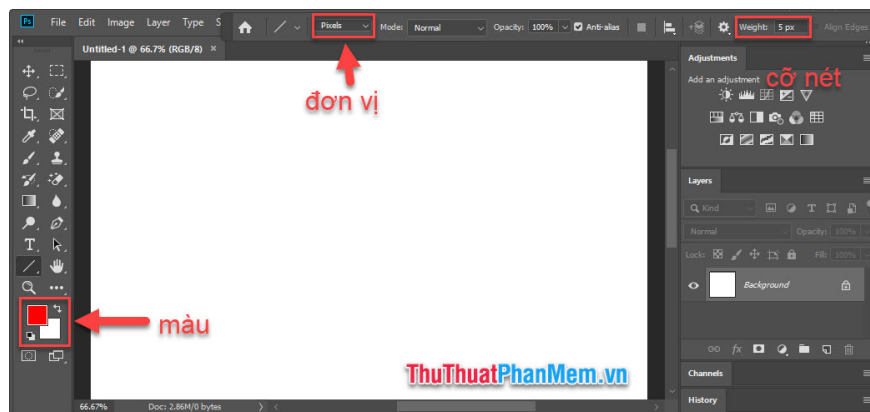

Draw straight lines in Photoshop (CC)

Step 1: Create a new layer with the combination Shift + Ctrl + N

Step 2: In the main interface of Photoshop, select Line Tool.

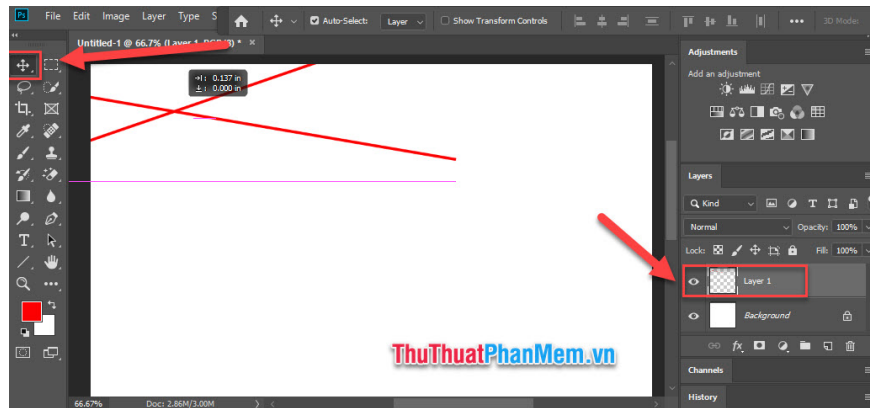

Step 2: Choose drawing colors, brush sizes.

Step 3: Draw a straight line by holding the mouse to drag a straight line, to the last point you release is.

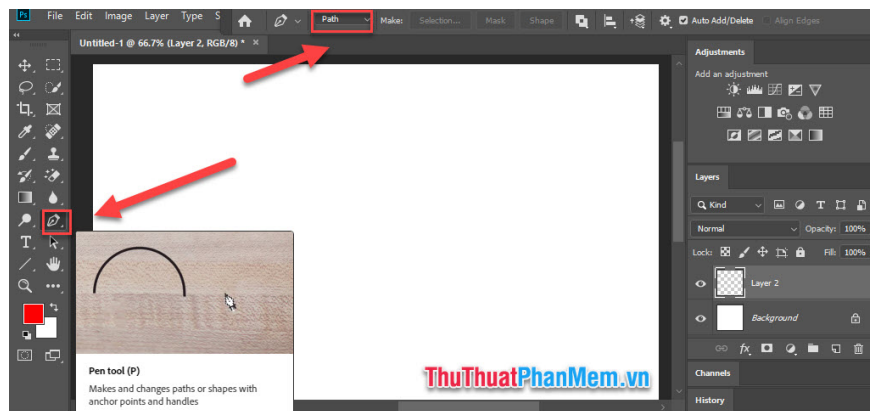

Step 4: To move the line, click the newly created layer, use the Move Tool. Hold the mouse on the line, drag away and then release the mouse.

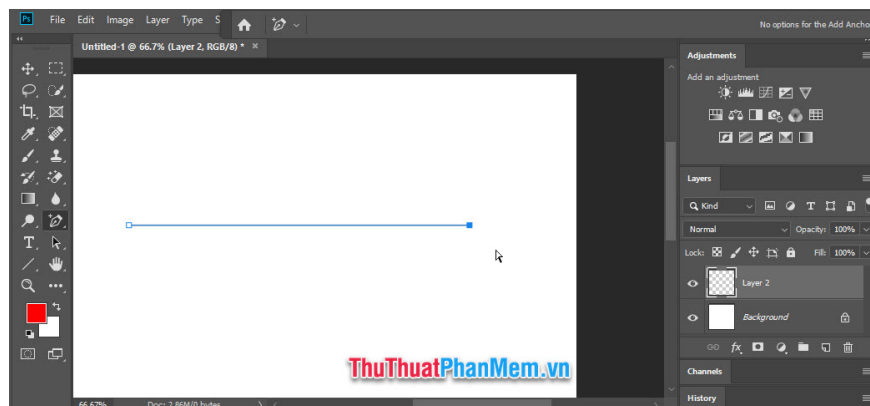

Draw curves in Photoshop

Step 1: Create a new Layer similar to the one above

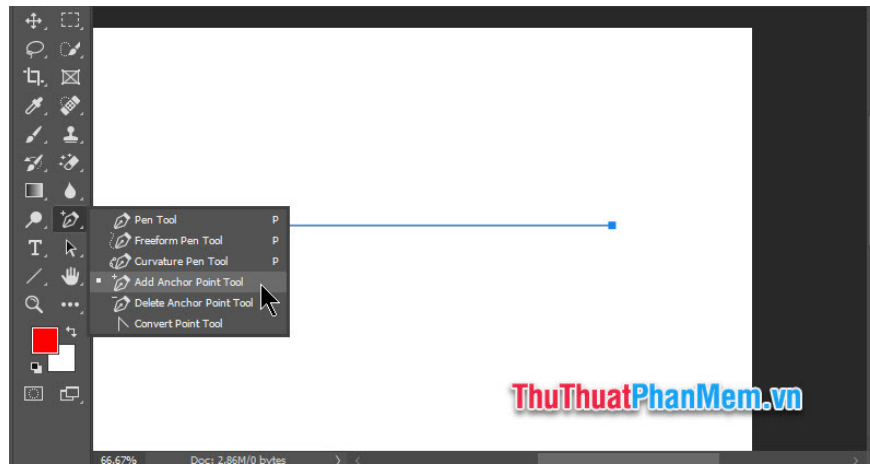

Step 2: Select the Pen Tool, type the Path.

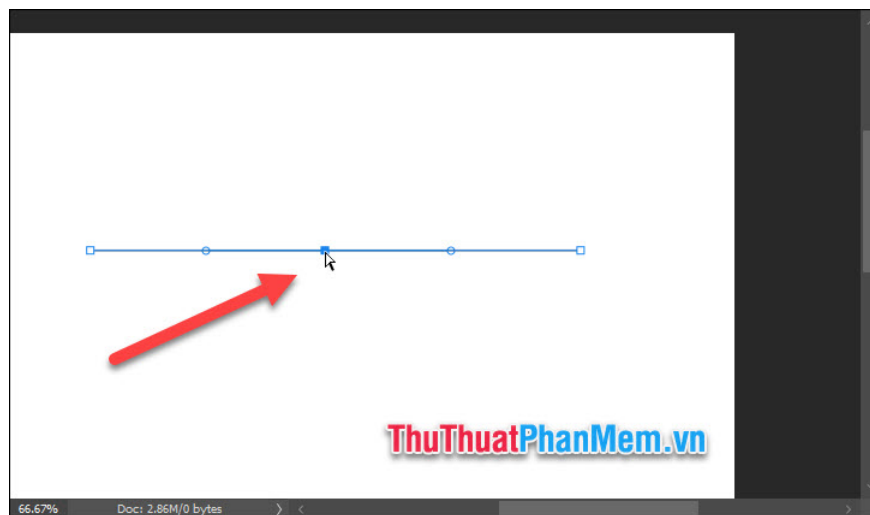

Step 3: Hold Shift, start and end points, you will get a straight line as follows:

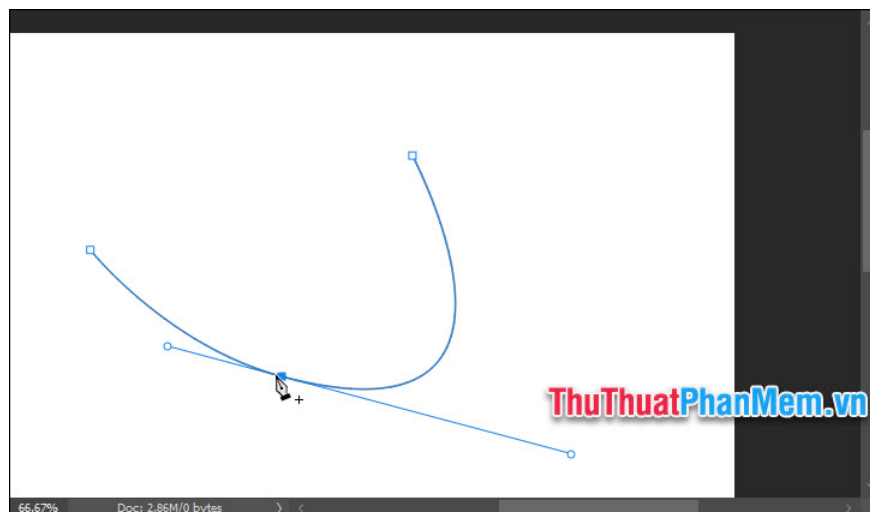

Step 4: Select the 'Add Anchor Point Tool'.

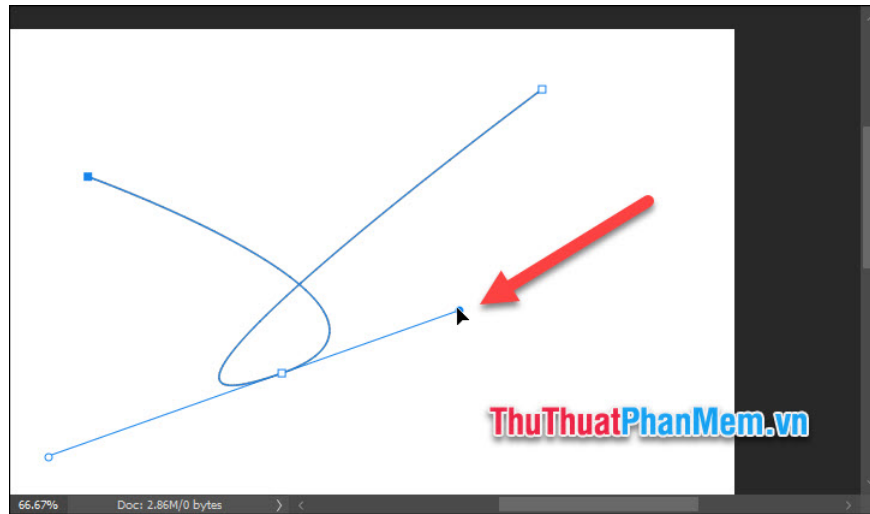

Step 5: Mark 1 point in the middle of the line.

Step 6: Hold the mouse on the square dot, drag it as you like, you will have a curve.

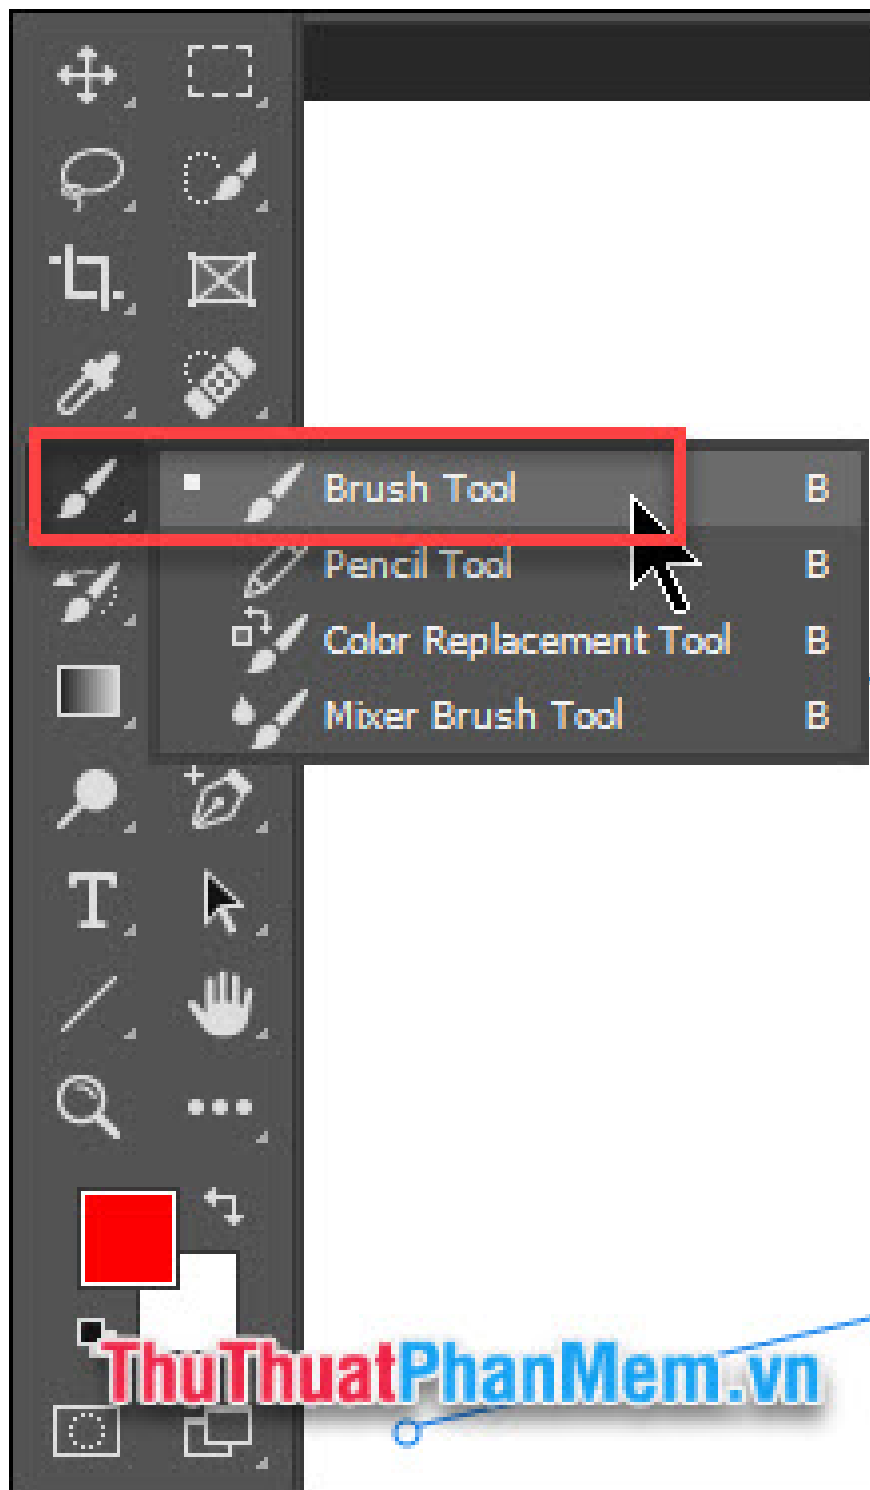

Customize arbitrary curves with dot handles.

Step 7: At this point, you have just created a curved path, not a brush stroke. To create a stroke on a path, practice the following:

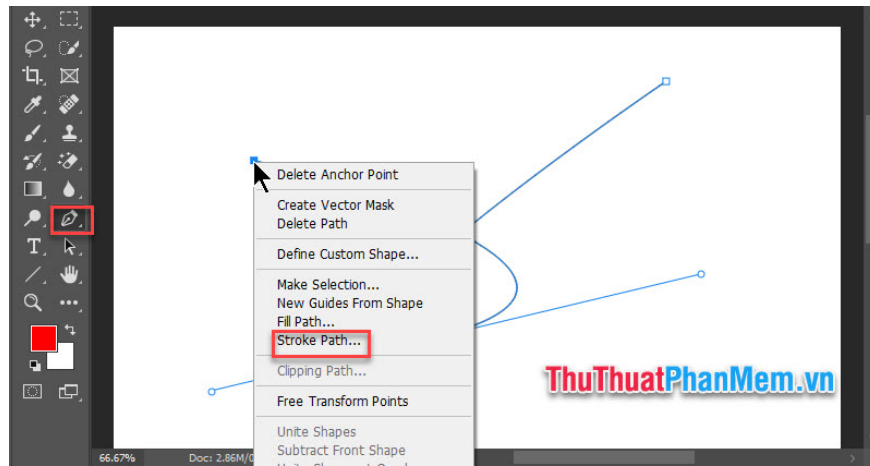

1. Pick the Brush Tool

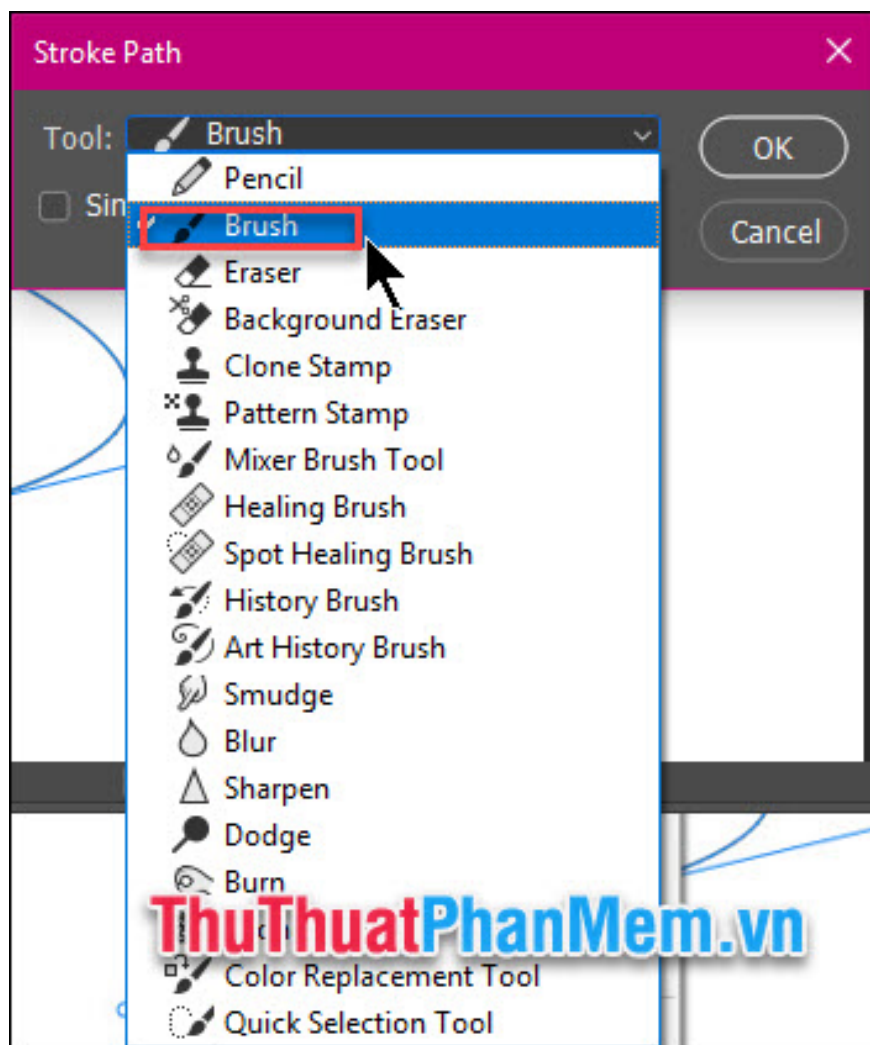

1. Press F5 to dim the Brush custom palette, choose the type of brush and stroke size

1. Pick the Pen Tool, right click on the path and choose Stroke path .

Choose Brush.

1. Select OK and you should have 1 curve
