

# How to edit images on Copilot AI

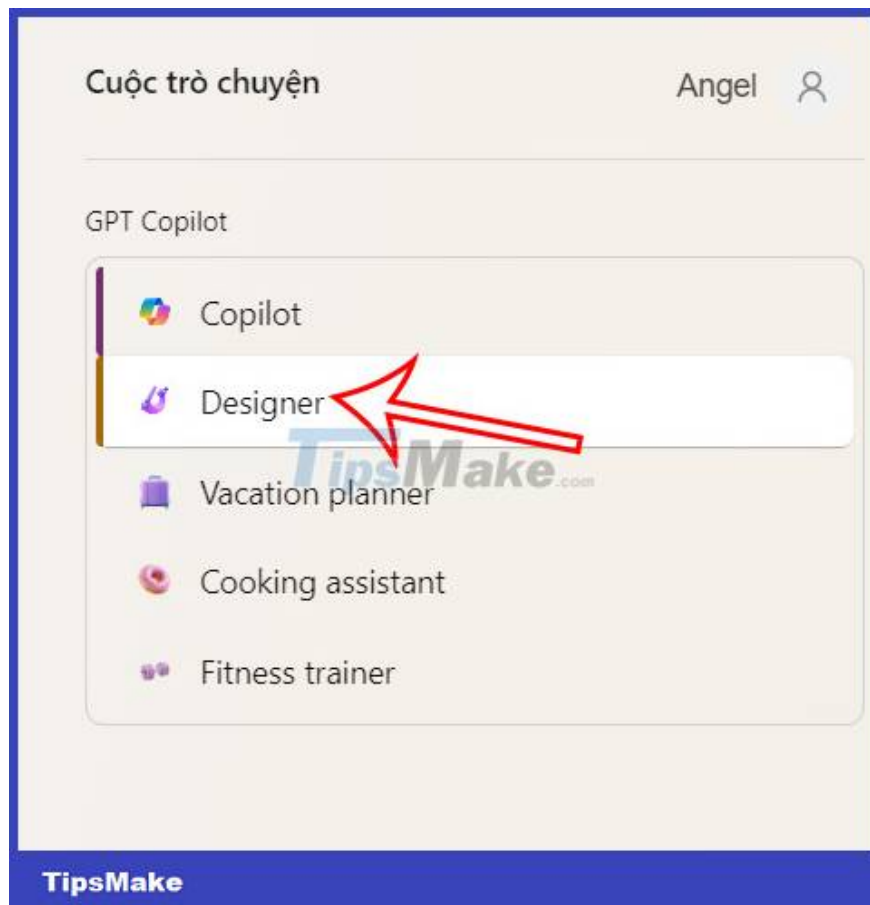

In addition to the image creation feature on Copilot AI, users can now edit those images right in Copilot without having to use additional image editing software.

Basically, you just need to request how you want to edit the image for Copilot to follow. The article below will guide you in editing images on Copilot.

## Instructions for editing images on Copilot

### Step 1:

First, access Copilot and log in to your Microsoft account. In Copilot's interface you will see the GPT Copilot list on the right side of the interface as shown below. We **click Designer** to use the image creation feature on Copilot.

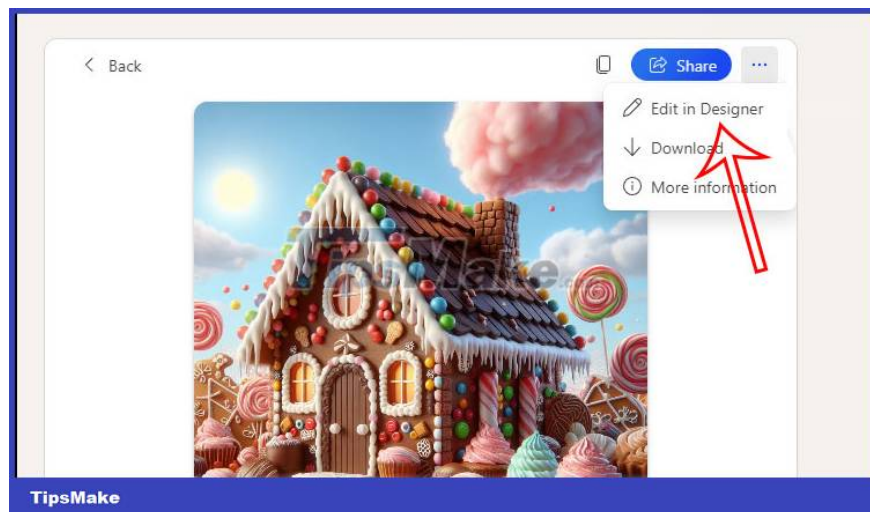

## Step 2:

Next, the user **enters the image content he wants to create** in the box below. As a result, you will see four images created from the content you entered. To **edit any image**, simply click on the created **image**.

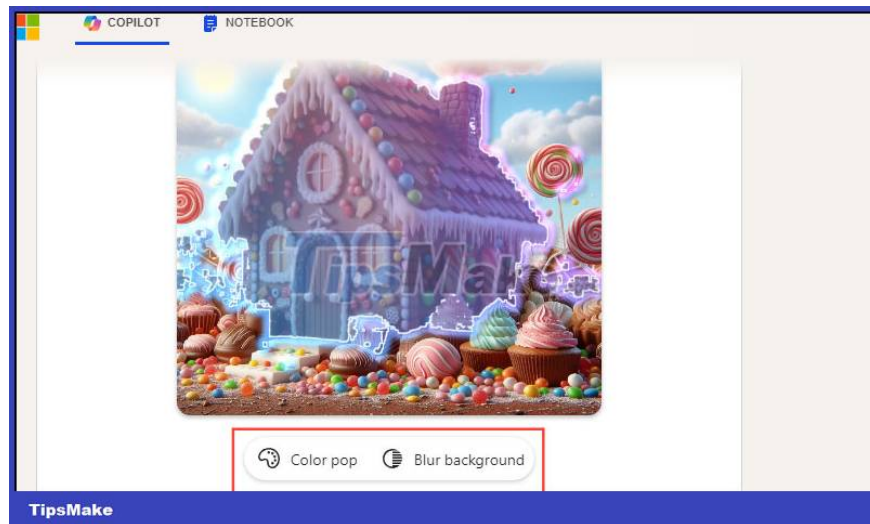

## Step 3:

At the new image viewing interface, we click on **the 3-dot icon** in the right corner and select **Edit In Designer** to proceed with image editing.

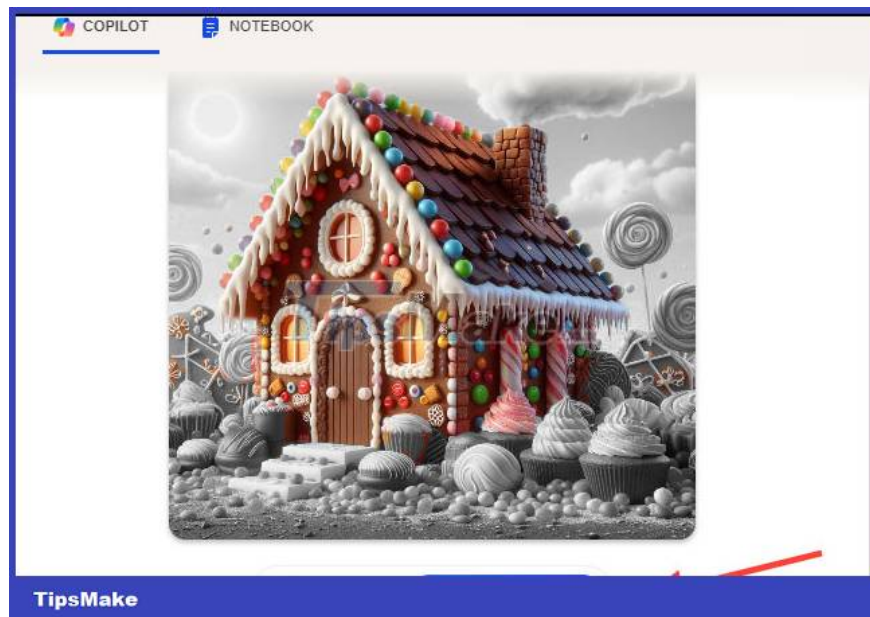

## Step 4:

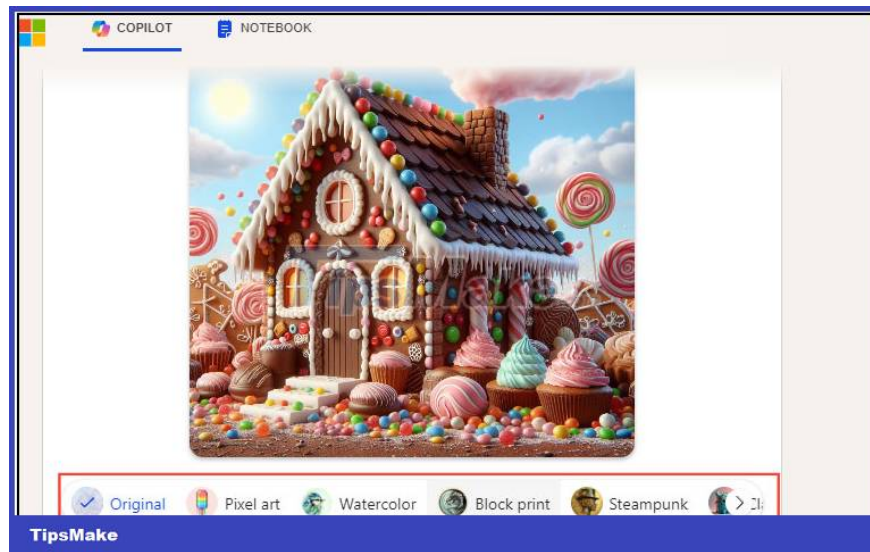

Now you need to **right-click the detail you want to edit** in the image. You can press the Shift key and then select multiple details to edit at the same time. Then below the image displays 2 options: **Color Pop** to turn unselected details into black and white and **Blur Background** to blur the background.

If you like the edit, **click Looks Good to save** .

In addition, below the image there are other effects to apply to the photo. After editing, click Download to download the image.
