

How to edit Instagram photos right on your computer

In addition to posting Instagram photos from a computer, we can edit photos uploaded to Instagram right on the computer, with very simple steps.

To post photos on Instagram, you can now upload photos on your computer without having to use Instagram on your phone as before. This makes it easier for users to share moments on Instagram. In addition, we can also edit basic online photos posted on Instagram right on the computer, such as rotating photos, zooming in or zooming out, adding color filters to photos.

Thus, users do not need to edit images on the phone, then post to Instagram account in the traditional way before. The steps to edit images posted on Instagram on the computer are simple, and will be guided by the Network Administrator in the article below.

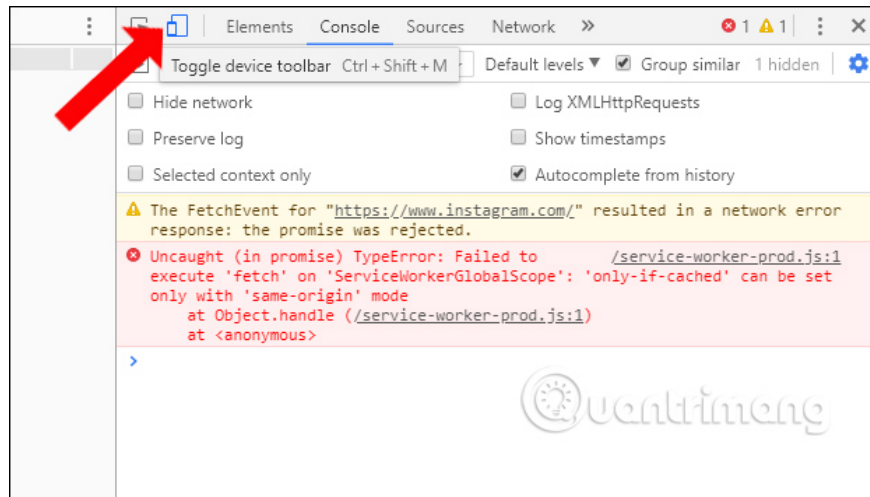

1. How to post photos to Instagram from a computer
2. How to register an Instagram account on a computer
3. Instructions for using Instagram on computers

How to edit and post photos to Instagram on your computer

Step 1:

You access your personal Instagram account on the browser. At the News Feed interface of Instagram, if using **Google Chrome** browser press **F12** or right-click and choose Inspect. If it is Firefox, press Q or right-click and select Inspect Element. The interface of the Developer tools panel of the browser appears.

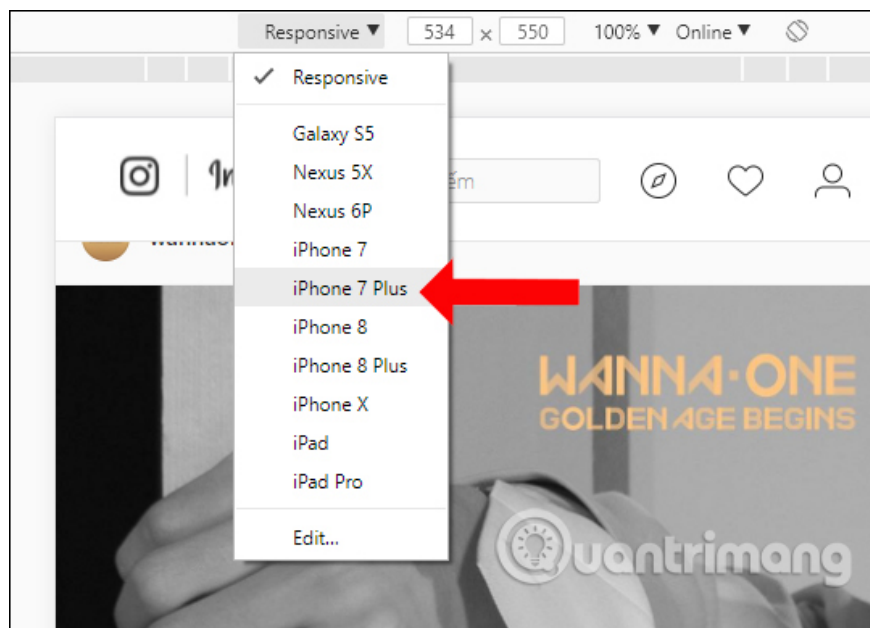

Here click **the Toggle device toolbar icon** in the navigation bar of the Developer tools interface as shown below, to transfer the Instagram window interface to the phone interface.

Step 2:

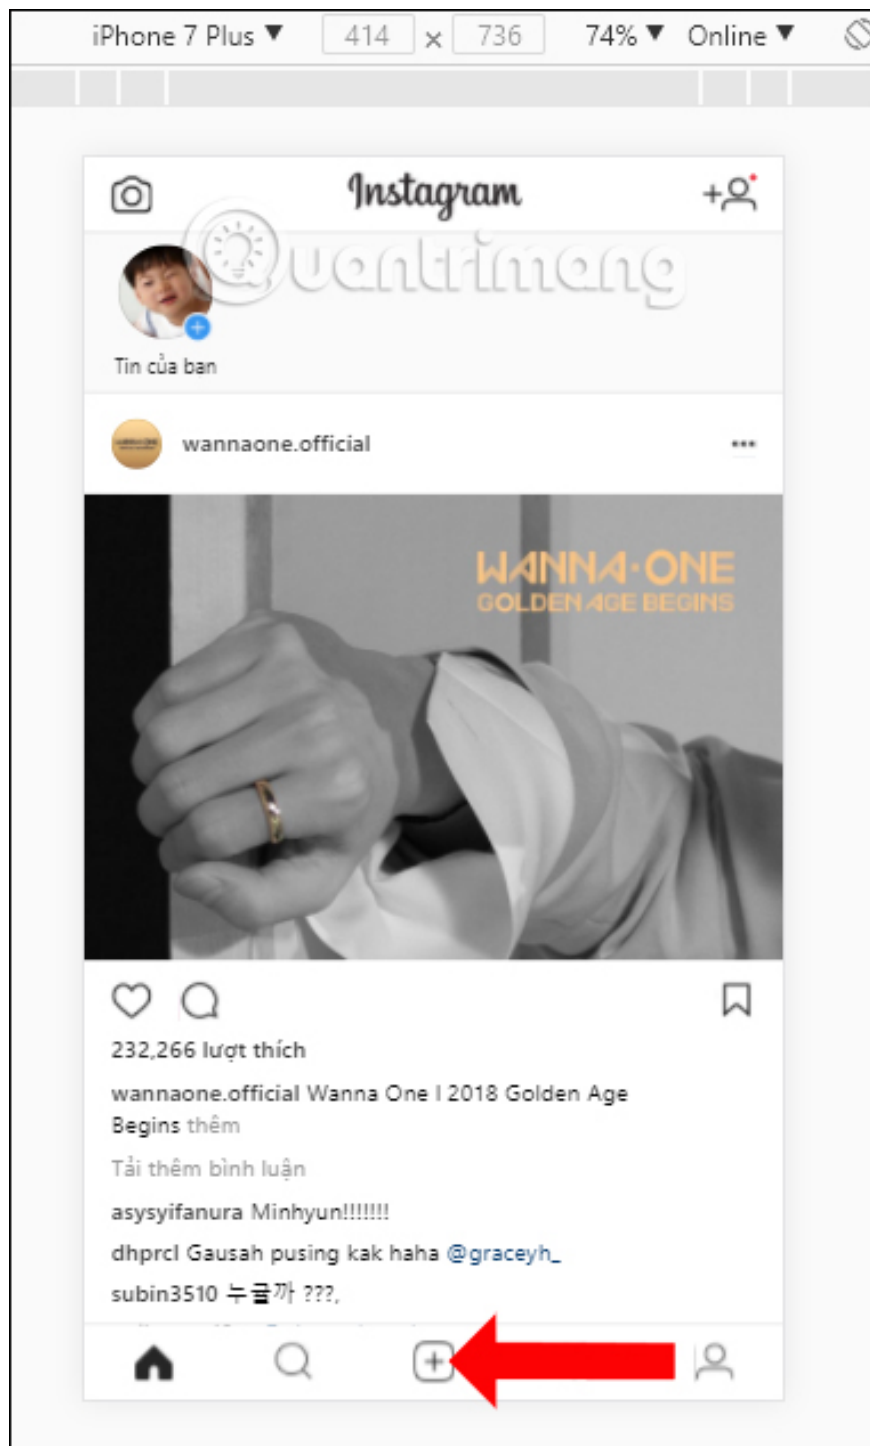

Look down at the **Responsive** section, click and appear a list of devices to choose to bring the Instagram interface to the right device size. You should choose the **iPhone 7 or iPhone 7 Plus interface** .

Next press **F5** to reload the Instagram interface of the phone. A toolbar appears below the screen, including a button to upload images to Instagram on your computer.

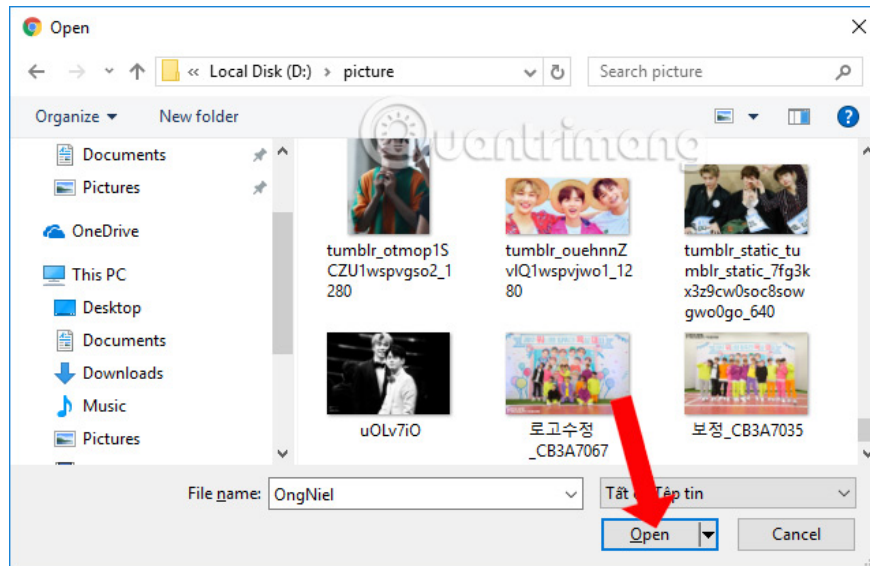

Step 3:

Click on **the image posting icon** in the toolbar.

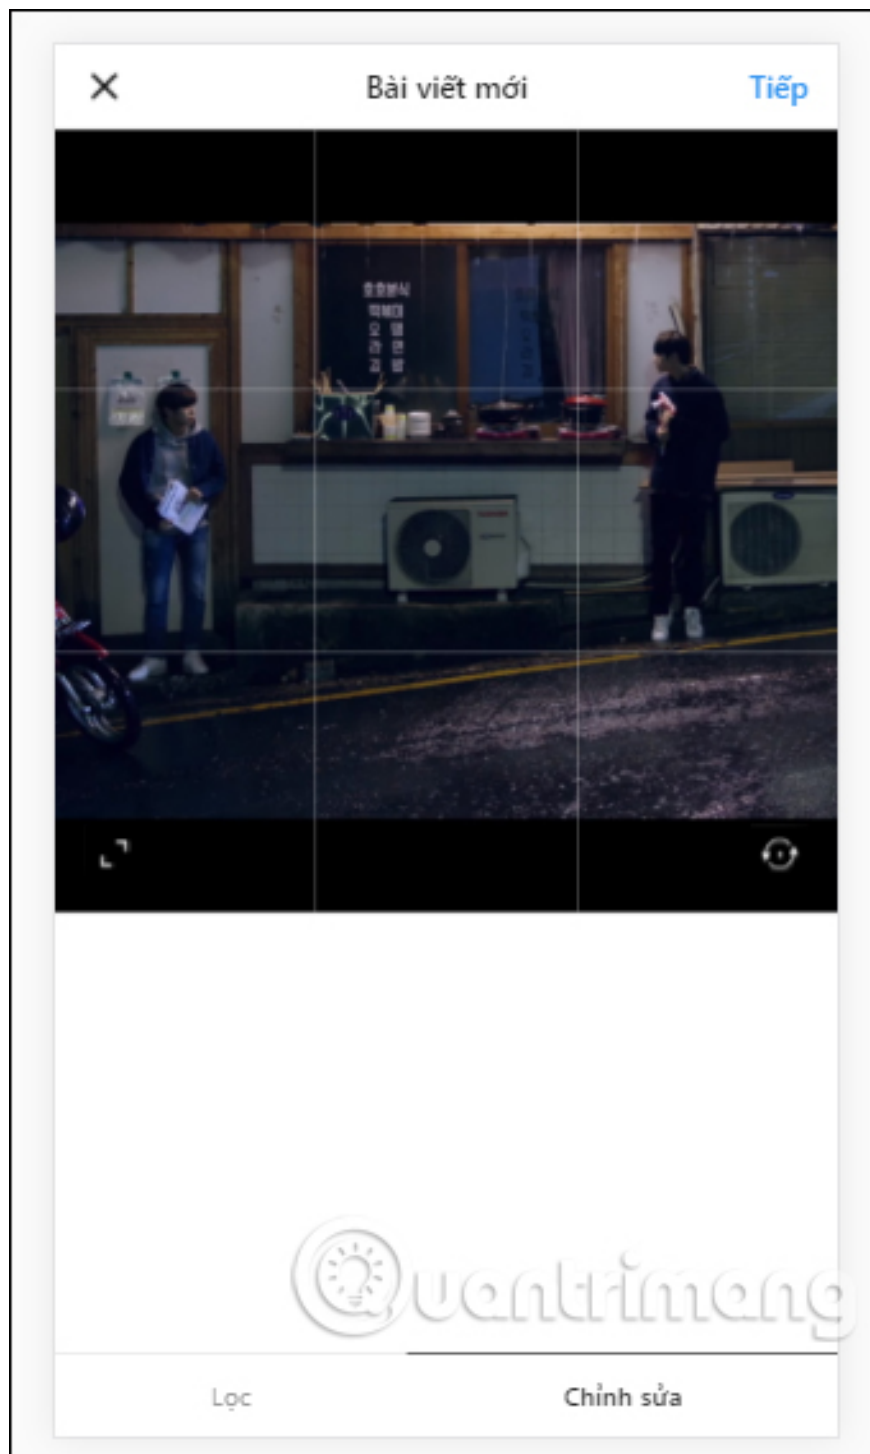

Appears a folder on your computer, click on the image you want to upload to Instagram and then click **the Open button** to download the image.

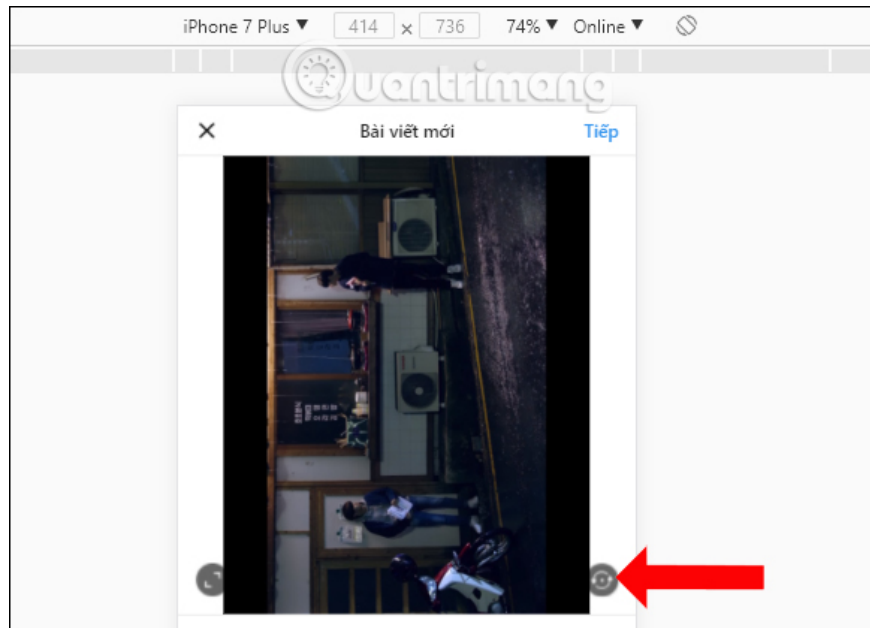

Step 4:

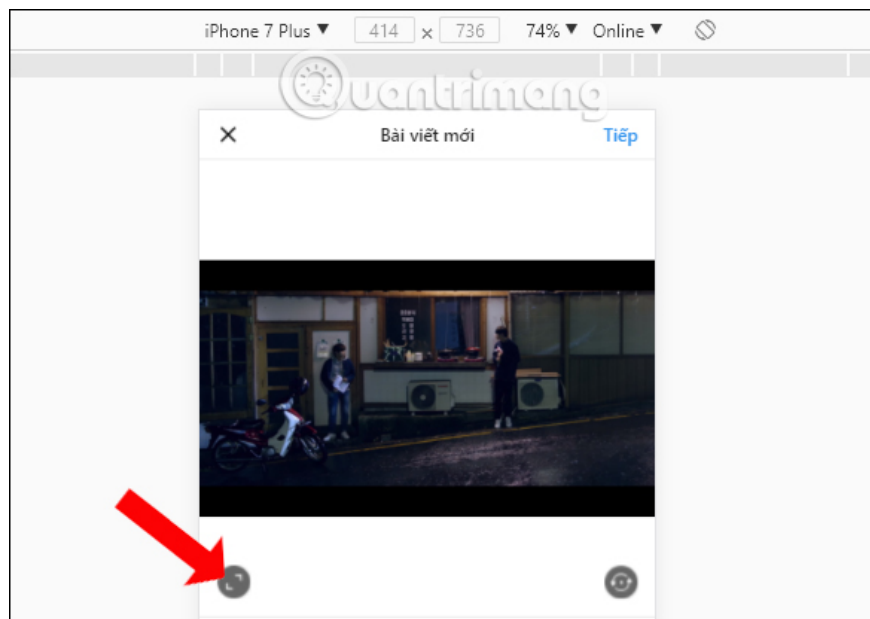

You wait a few seconds for the image to be uploaded to the Instagram system. Here, we will proceed to revise the image at the basic level with 2 items: **Edit** and **Filter** .

In the Edit icon on the right, the image will be used to rotate the image angle.

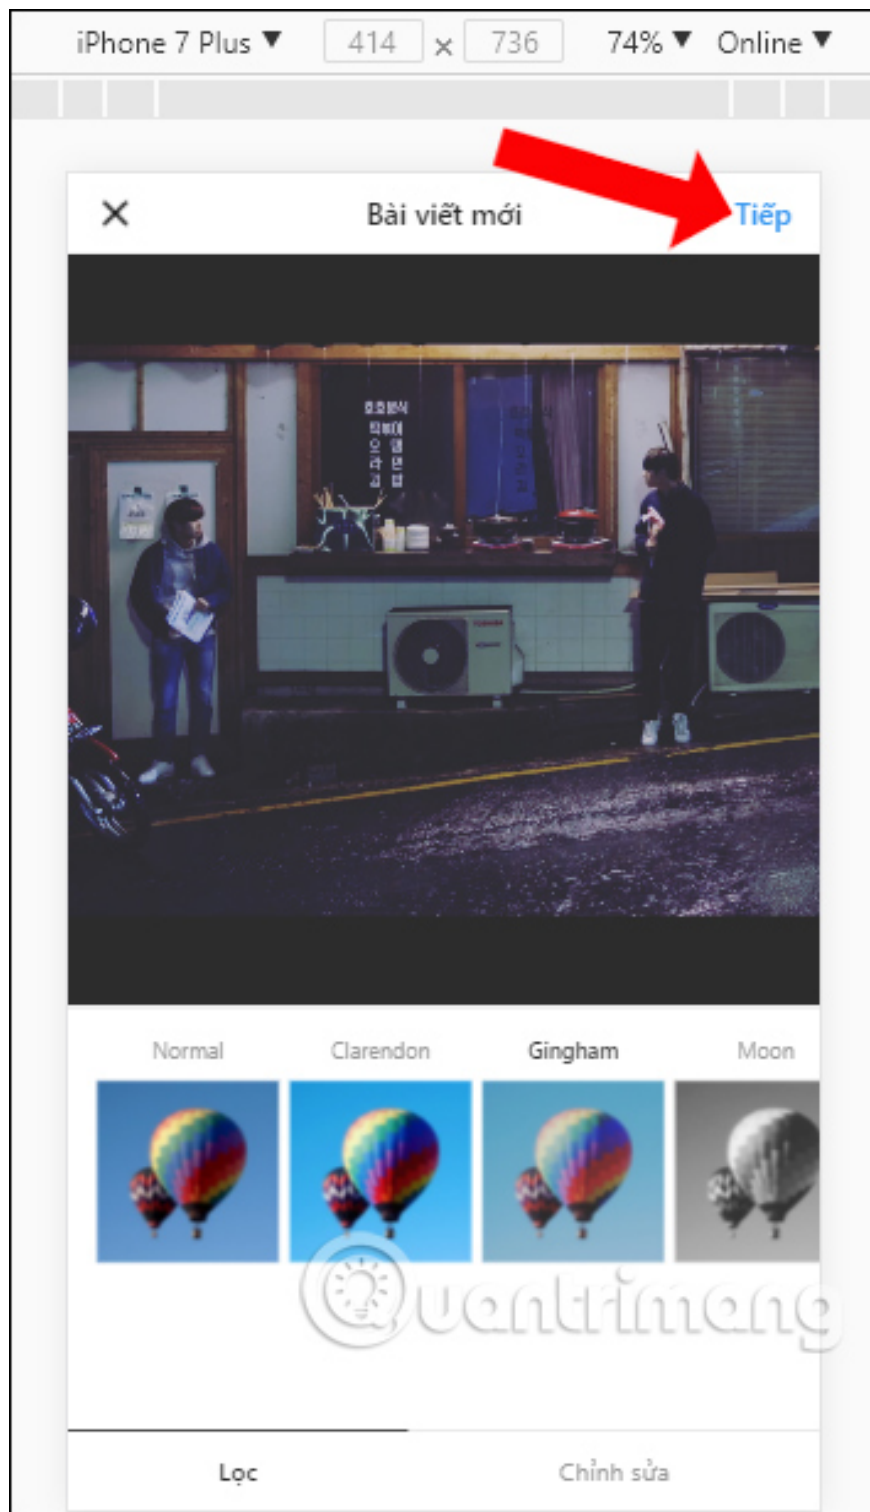

The icon on the left of the image is used to enlarge or shrink the image.

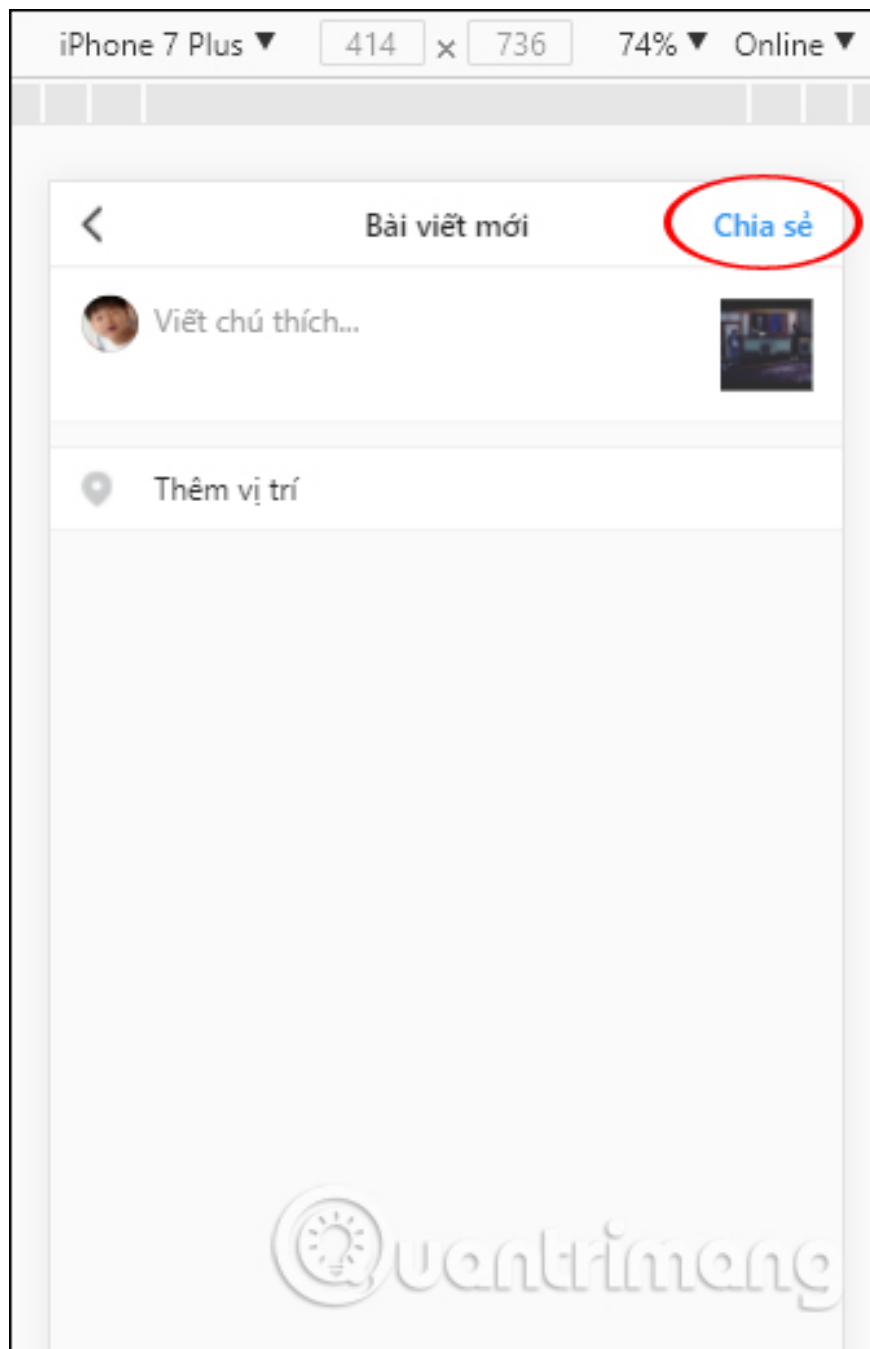

Step 5:

Clicking on **Filter** will see there are 4 basic color filters including Normal, Claredon, Gingham and Moon. Click on the color filter you want to use and click **the Next button** in the top right corner of the screen.

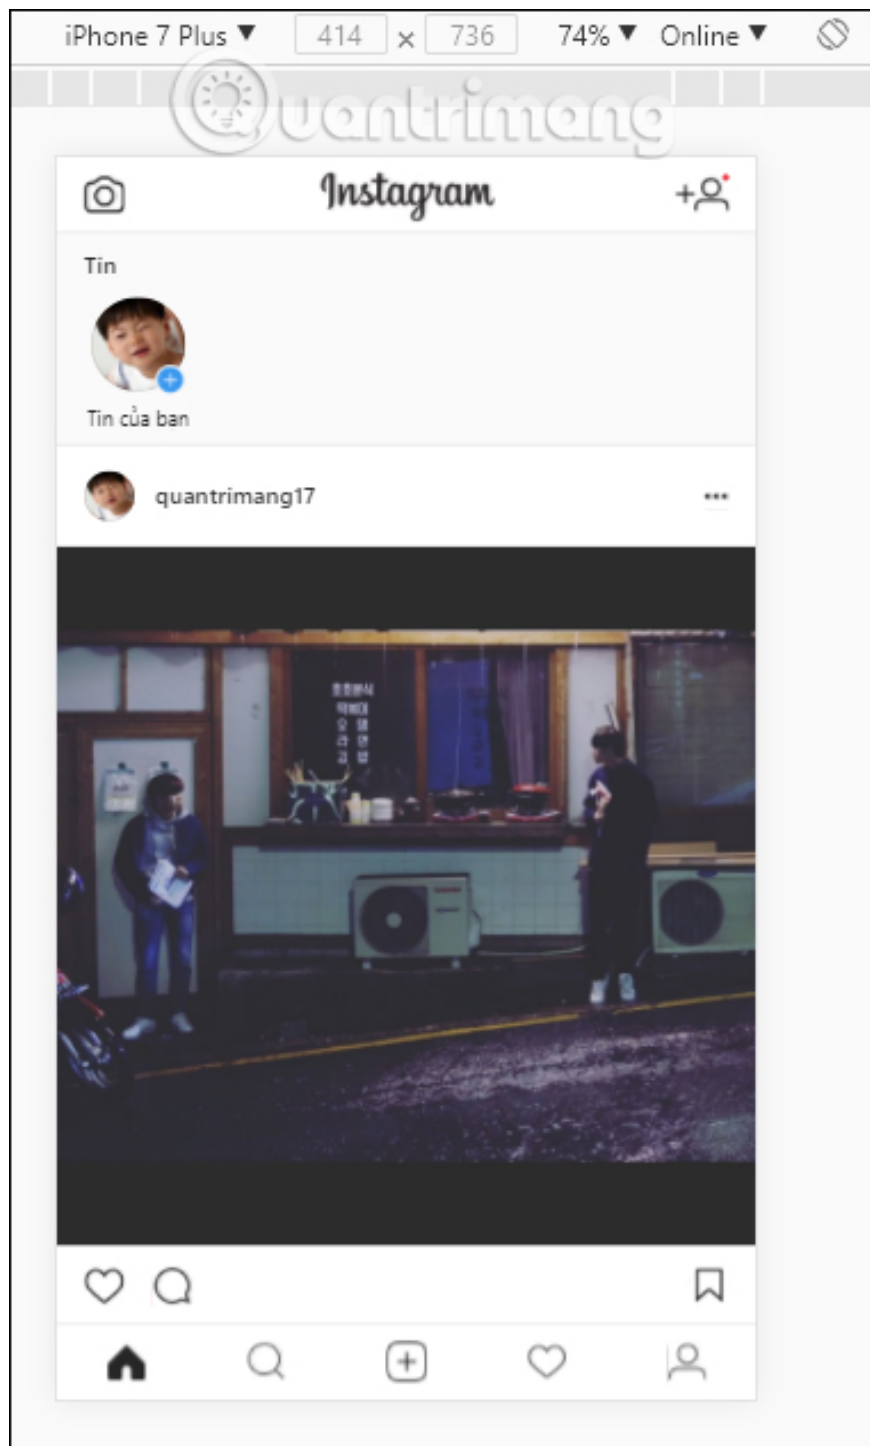

Step 6:

Next you can write more content for the image, add the location if you want and then click **the Share button** to proceed to upload photos to Instagram on your computer.

Finally, the image posted to Instagram will have a color filter, which we don't need to edit on the phone like before.

Although the photo editing options for posting Instagram on computers are simple, basically rotate the image, zoom in or zoom out and 4 color filters, but also help users refresh their images. without editing photos on the phone. Besides, if there is a need, you can also link Instagram account with Facebook or Twitter account, to share photos on different social networks.
