Edit SVG files in CorelDRAW

Download the latest version of CorelDraw here:

For those unfamiliar, SVG is an XML-based language used to view vector graphics on websites.

By editing SVG files in CorelDRAW, you can add the special effects you want and save the file as a CDR file, the default file format in CorelDRAW.

Follow the steps below to edit an SVG file in CorelDRAW:

Step 1: Open CorelDRAW, then find and click **File => New** in the upper right corner to open a new document. Alternatively, you can open a new document by finding and clicking the paper icon.

Step 2: To import a file, go to **File => Import**.

Step 3: In the selected file dialog box, find and click the **SVG** file format .

Step 4: Select the SVG file you want to import, then find and click the **Import button**.

Step 5: After importing the file, you will see it displayed in CorelDRAW. Press **Enter** to move the file to the center of the page.

Step 6 : To edit the SVG file, click **Arrange => Unlock**.

Step 7: Select the objects. Click **Arrange => Ungroup** to separate these objects, and you can begin editing the SVG file.

Step 8 : To save the edited file, go to **File => Save As** . Alternatively, you can click **Export** to export the edited file to another file format such as SVG or other file formats.

Additionally, you can check out more tips on how to remove borders in CorelDraw to make your photos look better.
