

How to edit videos on CapCut online

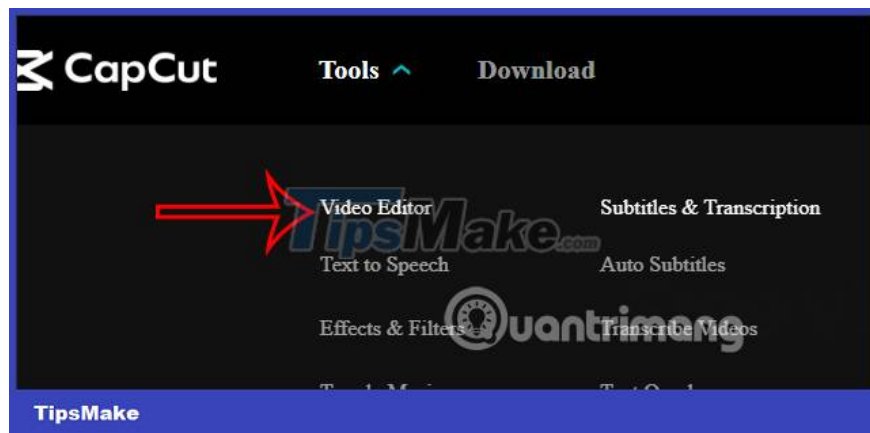

The online version of CapCut will also basically have the same basic editing features as when you edit videos on your computer CapCut, and also support you to edit the video editor from basic to advanced.

An online version of CapCut has also been implemented so that you can edit videos online right on your computer, without having to install video editing software. The online version of CapCut will also basically have the same basic editing features as when you edit videos on your computer CapCut, and also support you to edit the video editor from basic to advanced. The following article will guide you to edit videos on CapCut online.

Instructions for editing videos on CapCut online

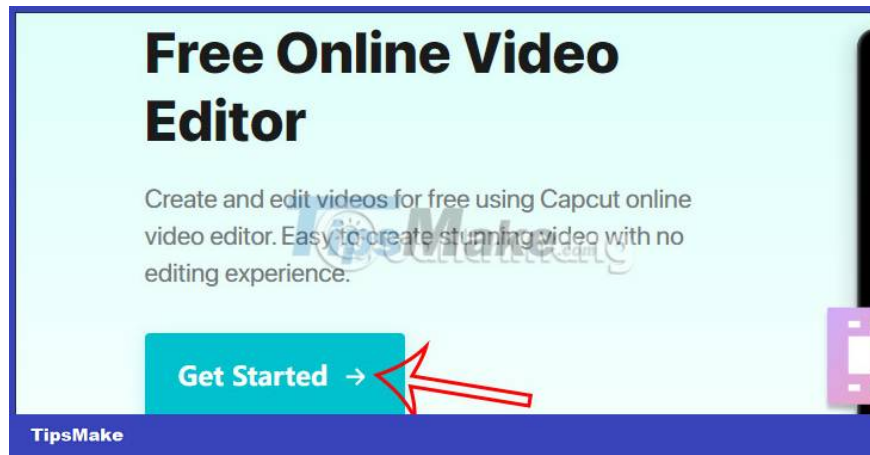

Step 1:

We access the link above to access CapCut online. At the website interface, click **Tools and then select Video Editor** .

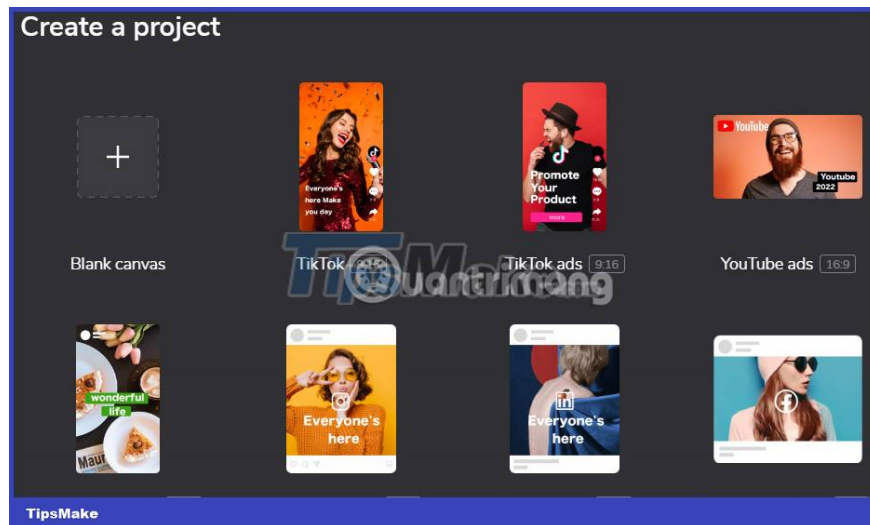

Step 2:

Click on **the Get Started button** to proceed with using the online video editing tool. To be able to export videos, you must log in or register for a CapCut account.

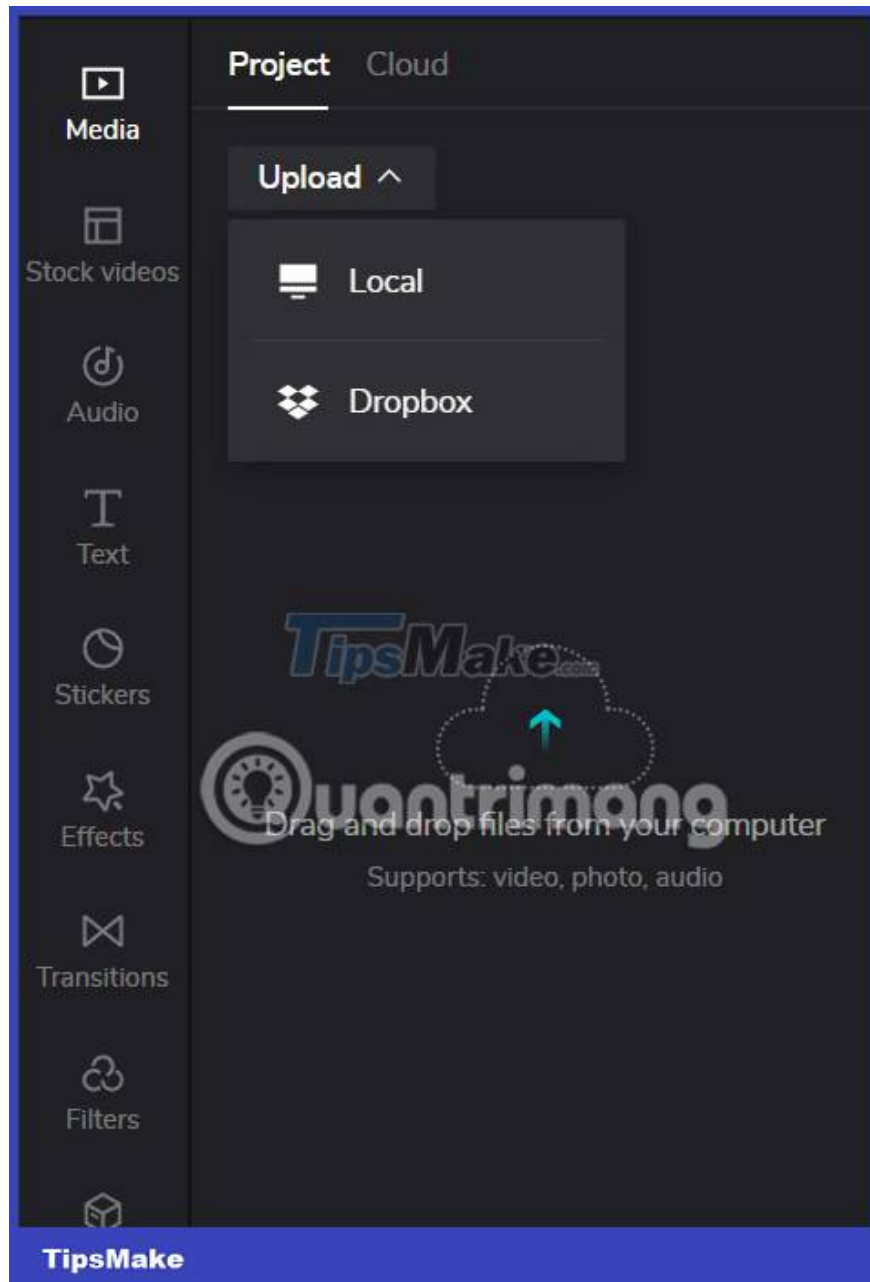

You are immediately transferred to the video editing interface on CapCut online. The user will first **select the video theme that you will create** . The website will let you choose the type of video with the corresponding size to post the video on.

If making a normal video, **click Blank canvas and click Create** below to create.

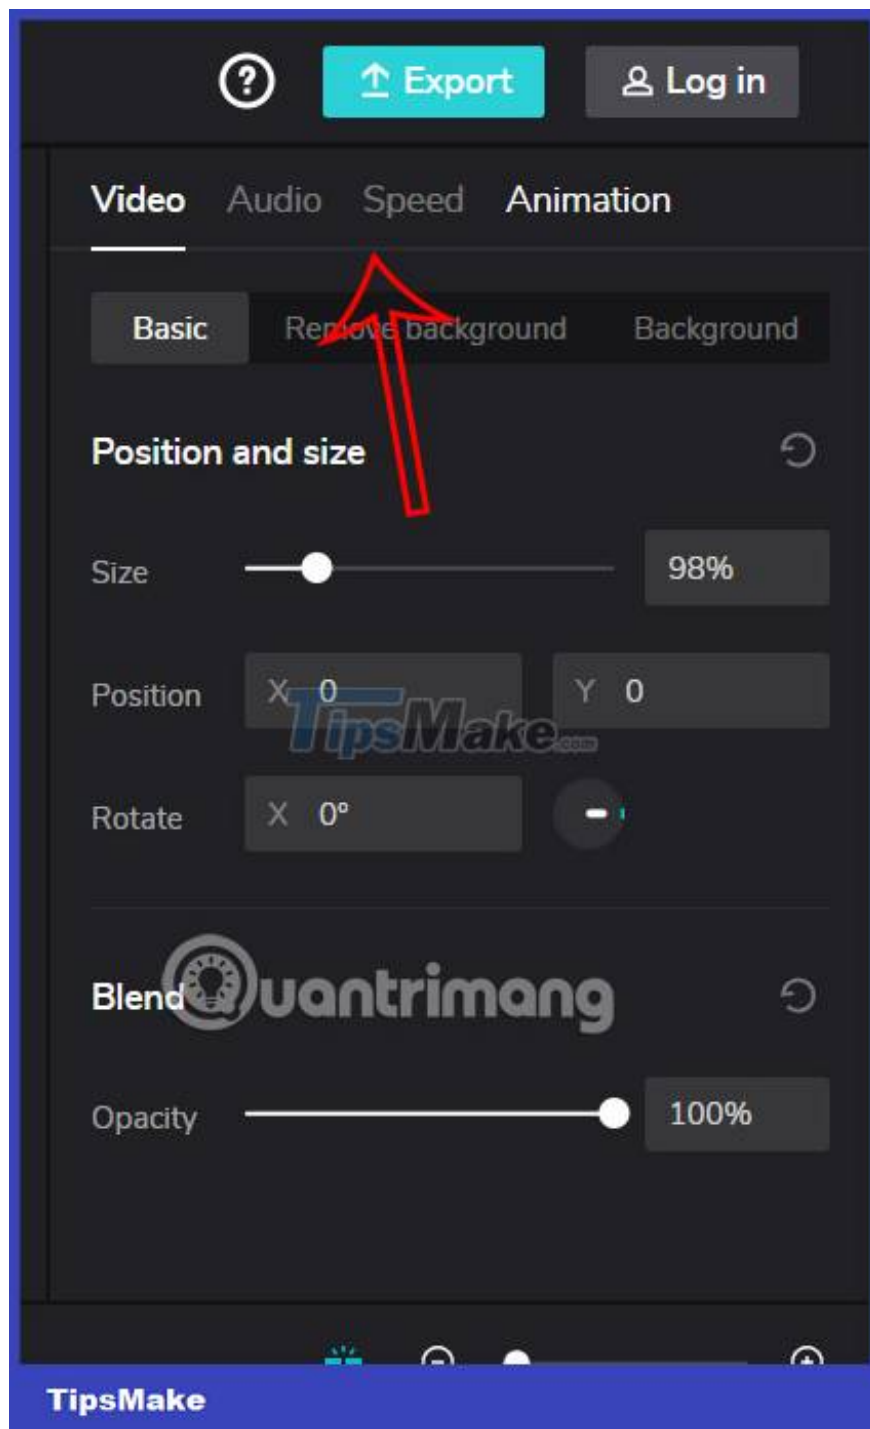

Step 3:

Switch to the video editing interface on CapCut online. Here we will **upload the video we want to edit** to the website. You have 2 options: download videos from your computer or download videos from your Dropbox account if we have a CapCut account.

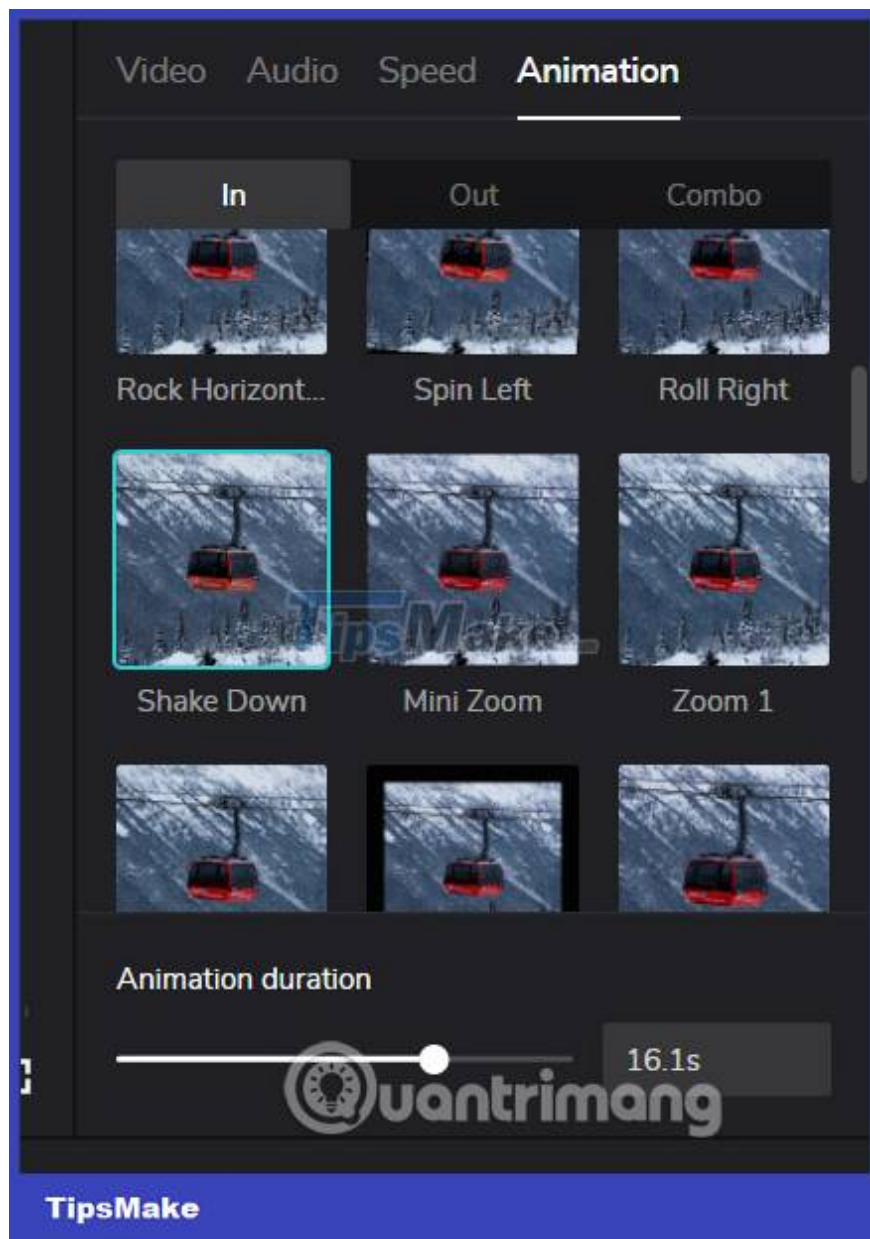

Step 4:

After uploading the video to CapCut online, you **can scroll down to the editing bar below** . Here we will adjust some **basic changes to the video** such as zooming in or out of the video, turning off the video sound. You look to the **right edge** to see the **changing features** for the video.

We can add effects in and out of the video if we want.

Step 5:

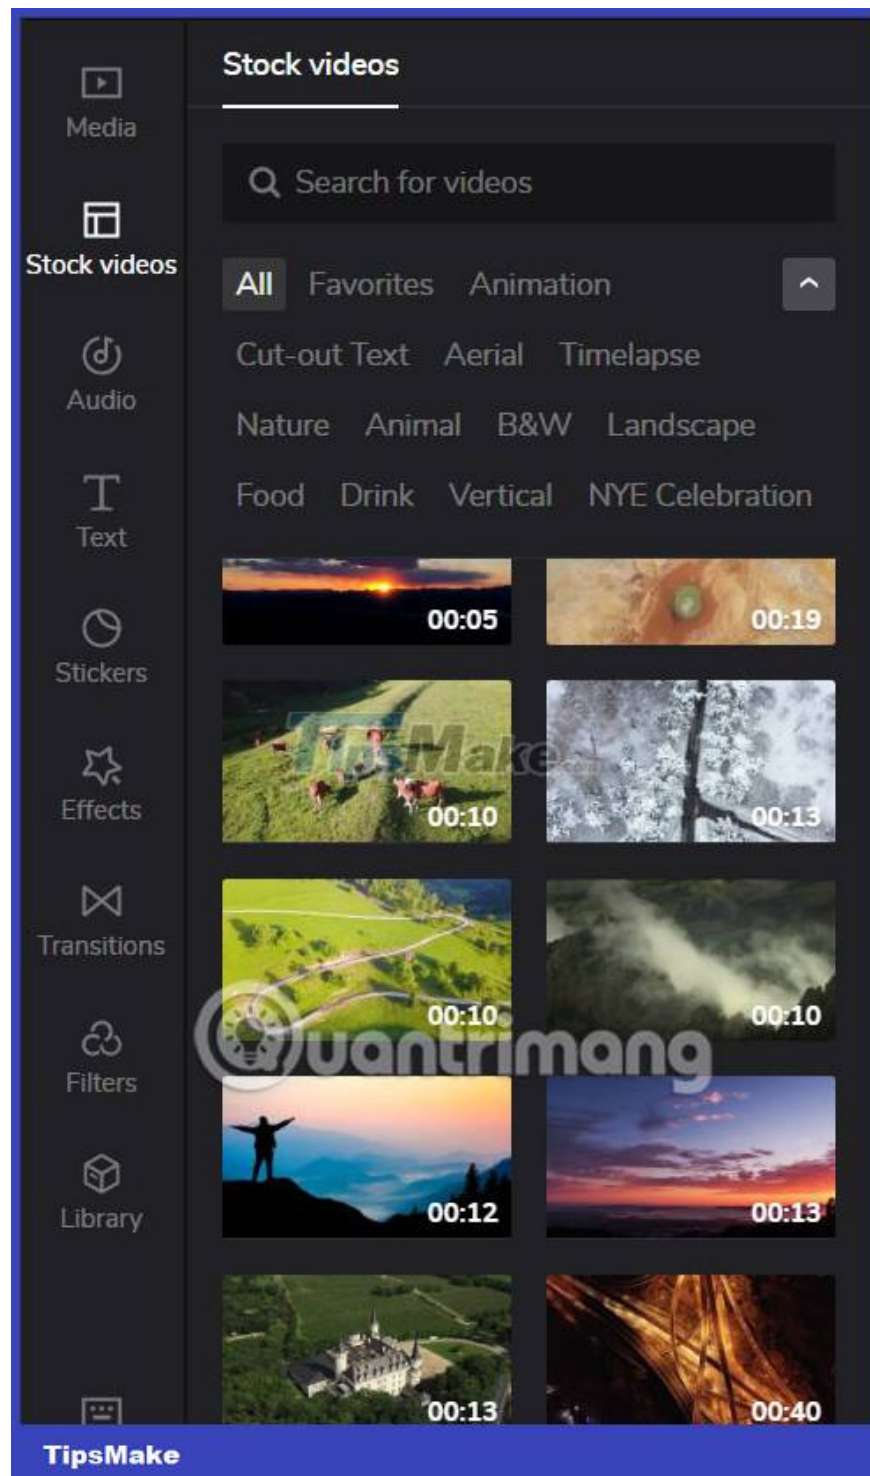

Next look to **the left edge of the screen** are **the effects** that you can use for the video.

Step 6:

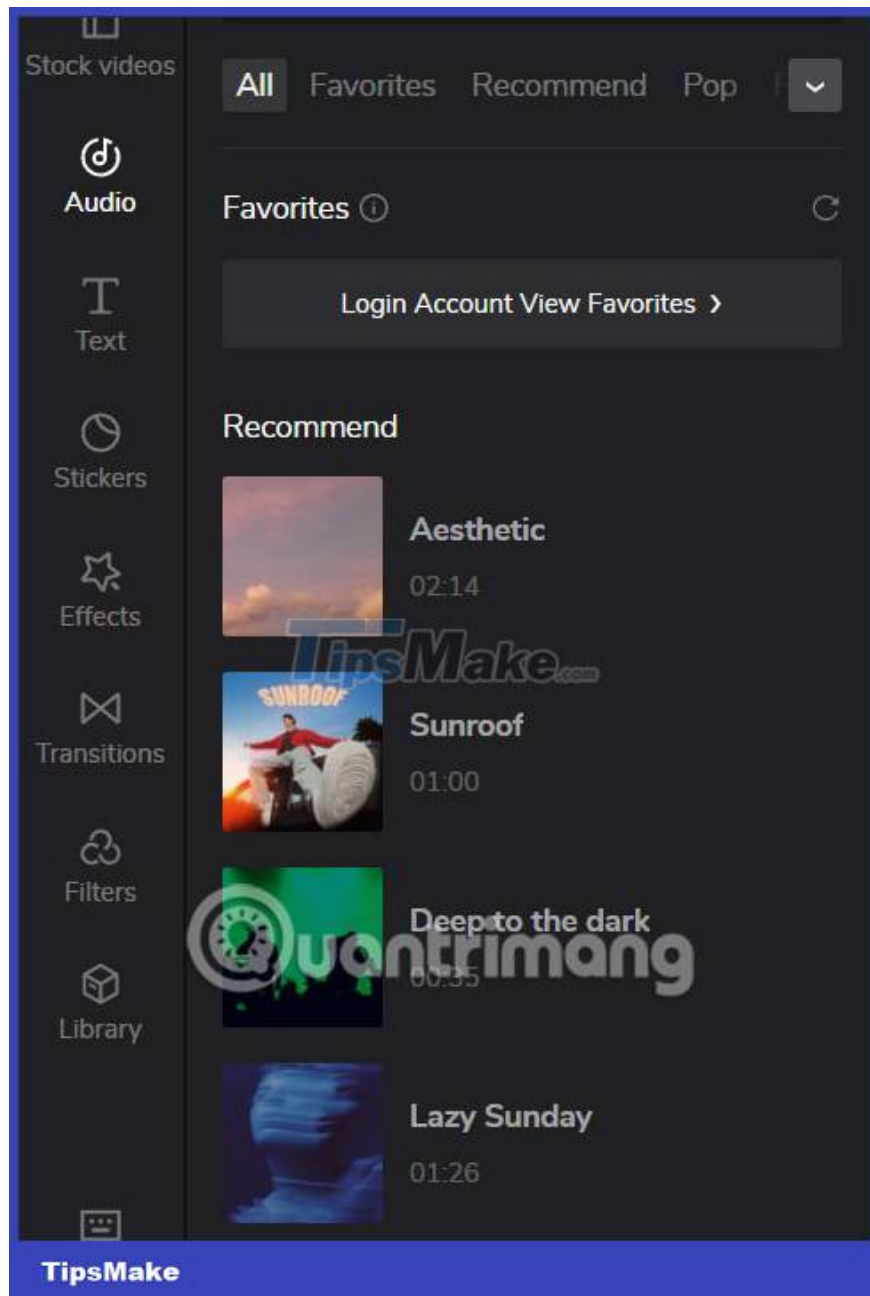

The video editing operations on the CapCut online version are similar to the CapCut version on the phone. If you want to **add any content to the video**, click , then **drag down the edit bar** below.

For example, you add an intro video, the beginning of your video. In the Stock videos section, we choose the type of video we like and then scroll down before your original video.

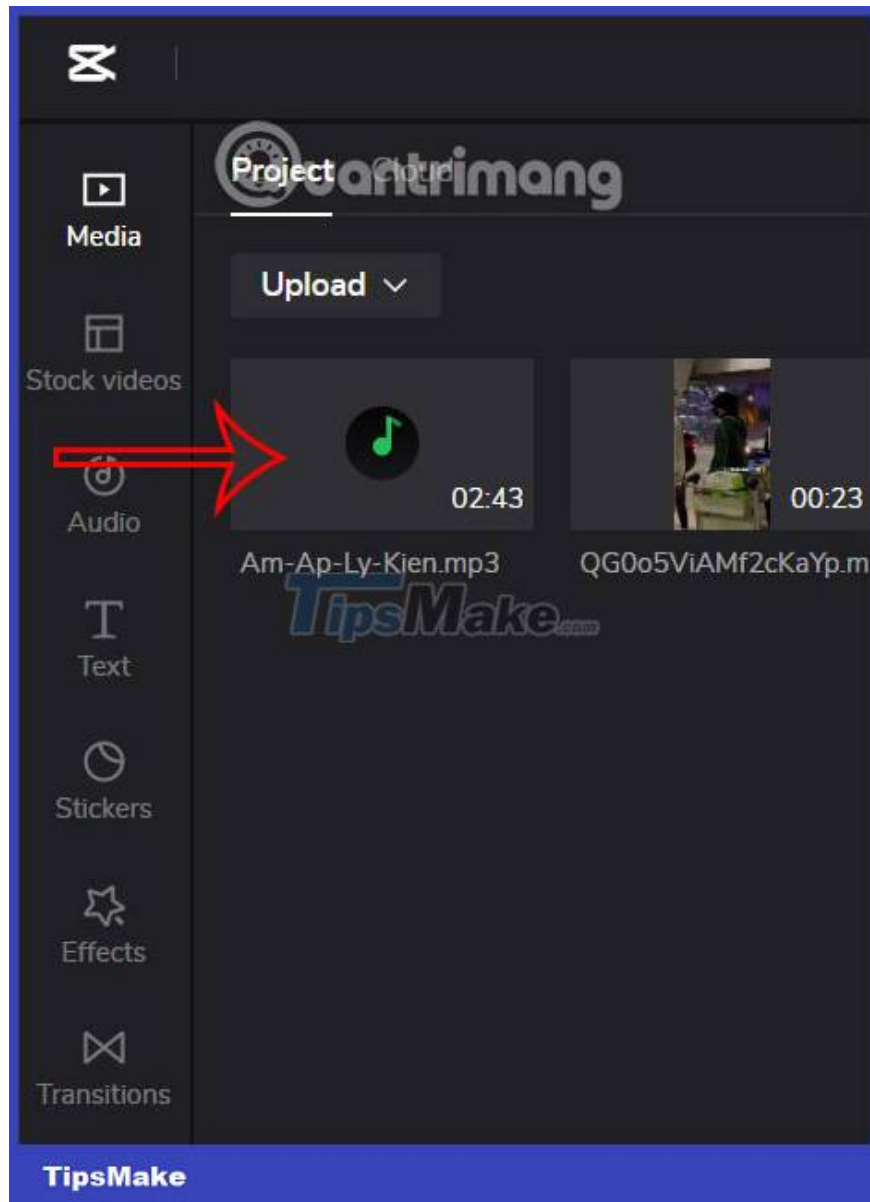

Step 7:

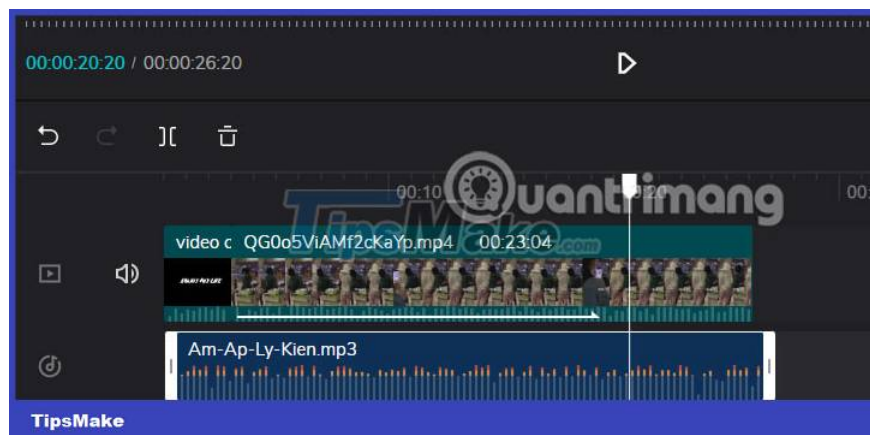

To **insert music into the video** , click on **the Audio section** . Then we choose the sound we want to use.

In case you want to **insert existing music** , go back to **the Media section and upload** your music.

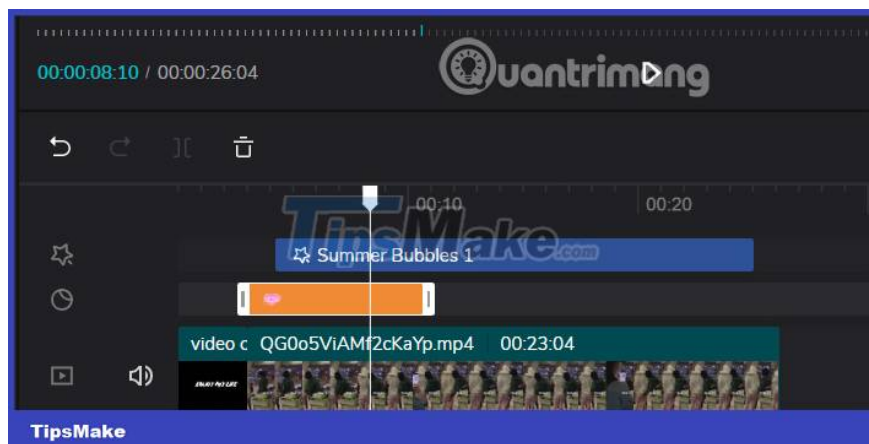

Then also **drag down the adjustment bar** . Audio for you to upload also has the same customizations.

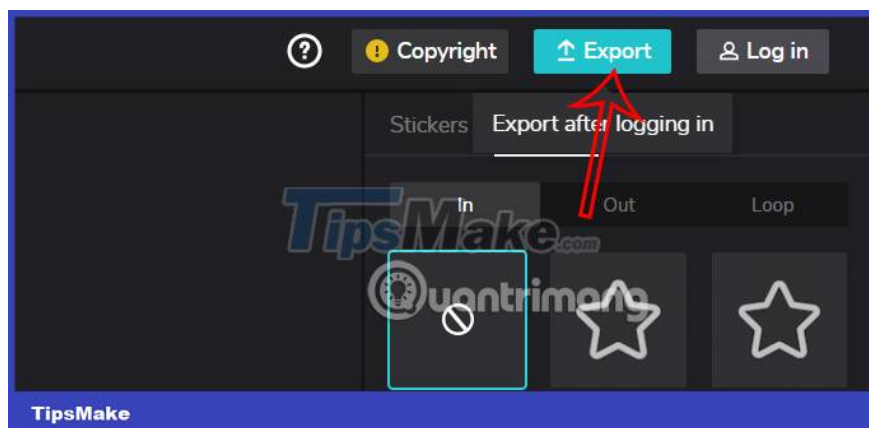

Step 8:

We continue to move to other items to insert into the video. Each content when inserted into the video will have a bar to adjust the time, change the display position. You adjust as usual.

Step 9:

After we have the video we like, we **click the Export button** in the top right corner to export the video.

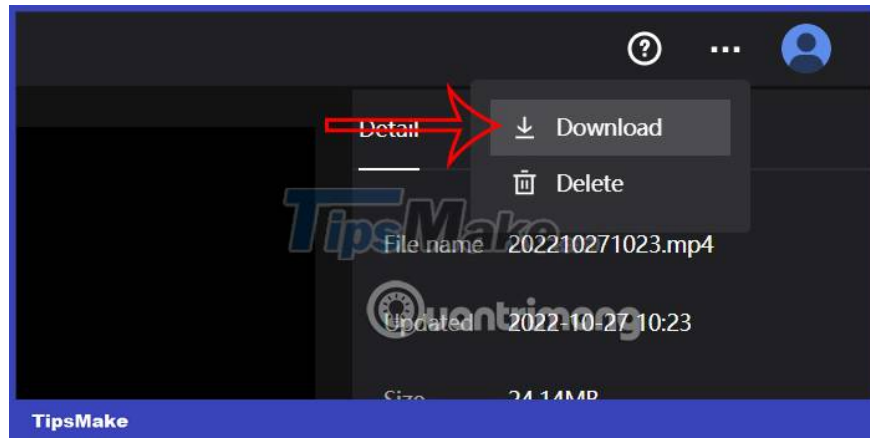

Users **select the output mode and quality for the video** and then click **Export** below.

Step 10:

Now you wait for the video to be completed on CapCut online. Finally, we **click on the 3-dot icon and then select the Download button** below. The video is downloaded to the folder you choose as the location to save the downloaded file from the browser.
