

How to effectively use Everfilter application on Android, iOS

Everfilter is a photo editing application with separate photo editor. With only 1 filter, but Everfilter will help you own the most unique photos. However, did you know how to use that effective filter?

Without bringing many image editing filters like many other applications, Everfilter makes its own mark when creating only Anime-style images only. Usage of Everfilter is also very simple, when you just need to select the filter theme you want to use and the application will perform the next task.

Although there is only one image correction filter with 7 styles, but to choose the right image and apply it to each filter and produce the beautiful image as desired, it is not known. So please refer to the following article of Network Administrator, to get more experience when selecting images to use the image editing application Everfilter offline.

1. How to edit photos using Everfilter application:

As mentioned, the image editing application Everfilter is extremely simple. Everfilter will have only one filter, which is the Anime animation style filter. Besides, the application also has a simple and easy-to-use interface, users only need to select 1 of 7 filter topics and apply only. Or we can use the night mode for the filter when clicking the moon icon.

After finishing editing, users can download images to the device, send to friends via email or share on Facebook, Twitter.

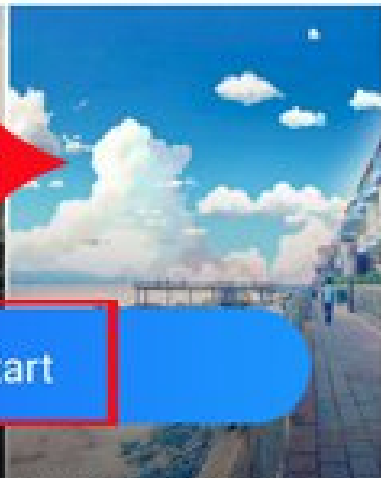

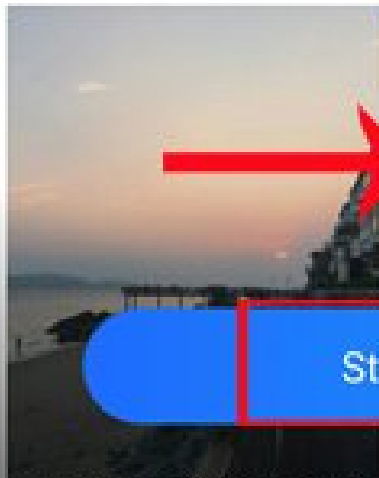

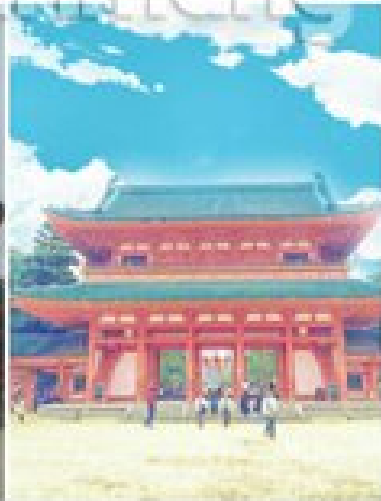

However, to be able to download and use the Everfilter application on iOS or Android devices, users will have to download additional links that the Network Administrator has instructed you in the article:

With the Android device, we just need to download the APK Everfilter link. As for iOS devices, it is more complicated. First you need to download the Everfilter link at the end of .ipa. Then download the iTunes and Cydia Impactor software to support the installation of Everfilter on the device.

2. How to select an image for the Everfilter application:

Because only own 1 filter with 7 image editing themes to choose from, so choosing a photo is relatively different. Users should only use Everfilter for **outdoor photos** , or **landscape shots** only.

For photos in the house, you should not use it with Everfilter. Because Everfilter's mechanism of operation will create cloud at white or extra bright positions in the image. With portraits, user-facing shots should also be carefully selected when using Everfilter's filter effects.

Maybe just using Everfilter, you will be able to produce works that are not as good as you want. But through the editing, we will have more ways to choose the appropriate image, as well as use any effect for any image.
