

How to enable 2-layer security on Telegram

Telegram launched two-layer security five years ago. If you have been using this service for a while or are just starting out, you should also enable this security feature immediately.

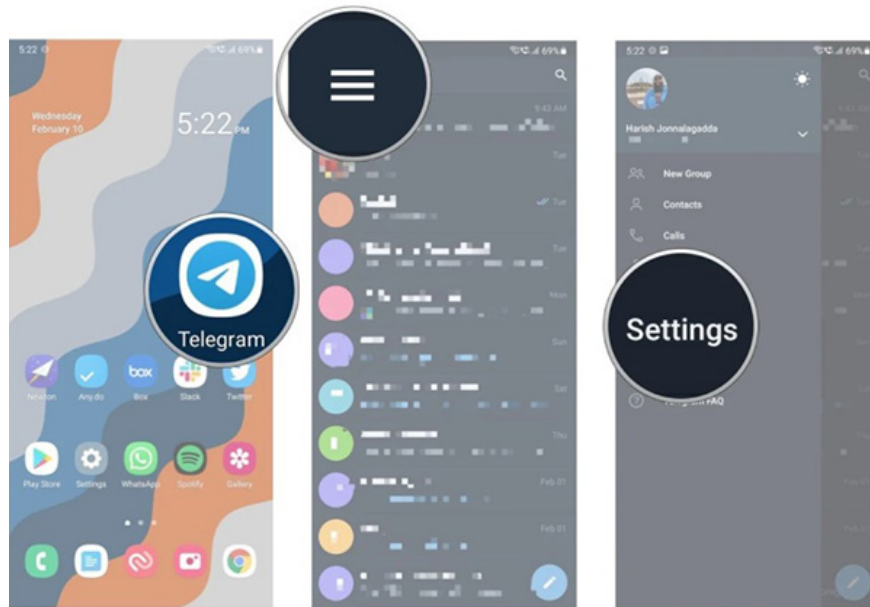

In the article below, TipsMake will guide you how to enable two-factor security for your Telegram account.

Your Telegram account is connected to your phone number, you will receive a code every time you log in to a new device. With two-factor security, you can set up a password at the same time with that code, you'll have to enter both when logging into your account.

Step 1. Open **Telegram** .

Step 2. Click on the **menu of three dashes** on the left side.

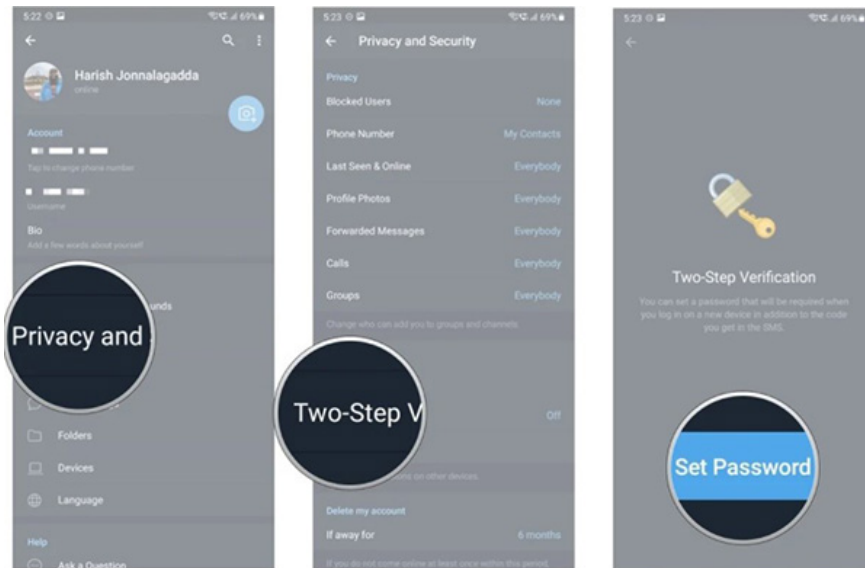

Step 3. Select **Settings** .

Step 4. Go to **Privacy and Security** .

Step 5. Select **Two-Step Verification** .

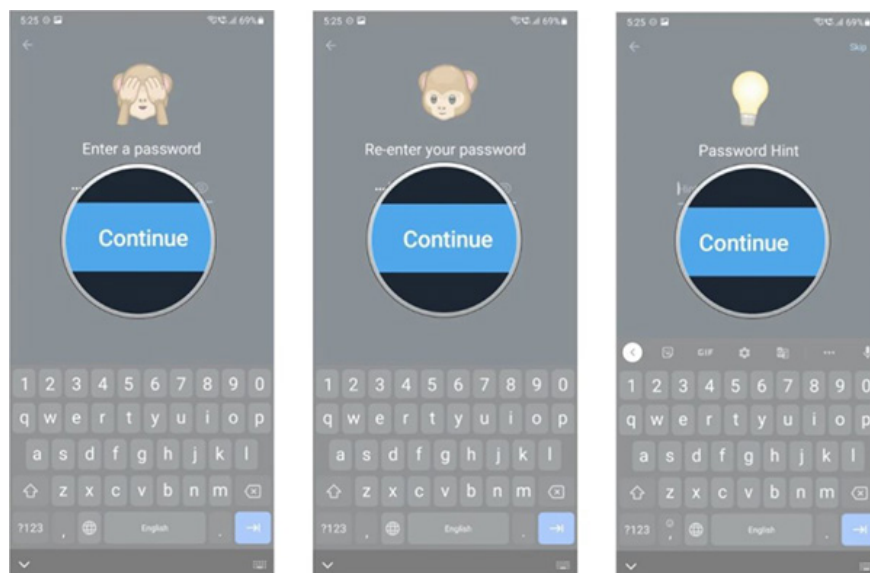

Step 6. Select **Set Password** .

Step 7. Enter the password you want to set.

Step 8. Confirm the password.

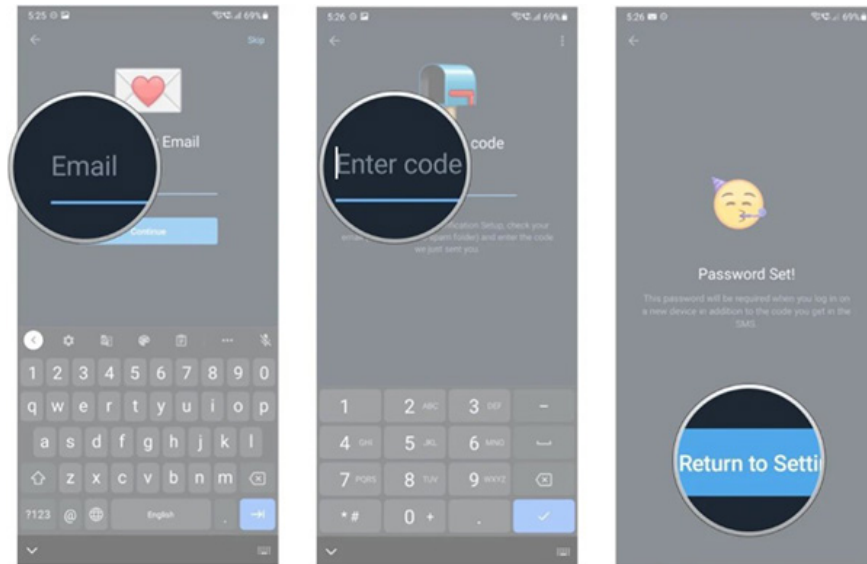

Step 9. Enter a hint for your password.

Step 10. Add a recovery email. If you forget your password, you can get the code sent back to this recovery email.

Step 11. You will receive a confirmation code sent to your email address. Enter this code to confirm the email.

Step 12. That's it, go back to **Settings** to finish enabling two-factor security for your account.

Telegram was the most downloaded app worldwide as of January 2021, the service supported more than 64 million installs this month. Facebook's representative WhatsApp is a direct competitor to Telegram, which is one of the best messaging platforms on Android.

Telegram is very light and does not use too many resources, making it a great tool for mid-range smartphone users.
