

How to enable automatic Picture-in-Picture in Firefox

Firefox browser has an option to enable Picture-in-Picture automatically without having to manually enable it like other browsers.

Picture-in-Picture mode allows you to watch videos in a separate floating window, separating them from the web pages. Firefox browser has an option to enable Picture-in-Picture automatically without having to manually enable it like other browsers. When you switch to another tab in the browser, Picture-in-Picture mode is automatically activated. Here are instructions to enable Picture-in-Picture automatically in Firefox.

Instructions to enable Picture-in-Picture automatically on Firefox

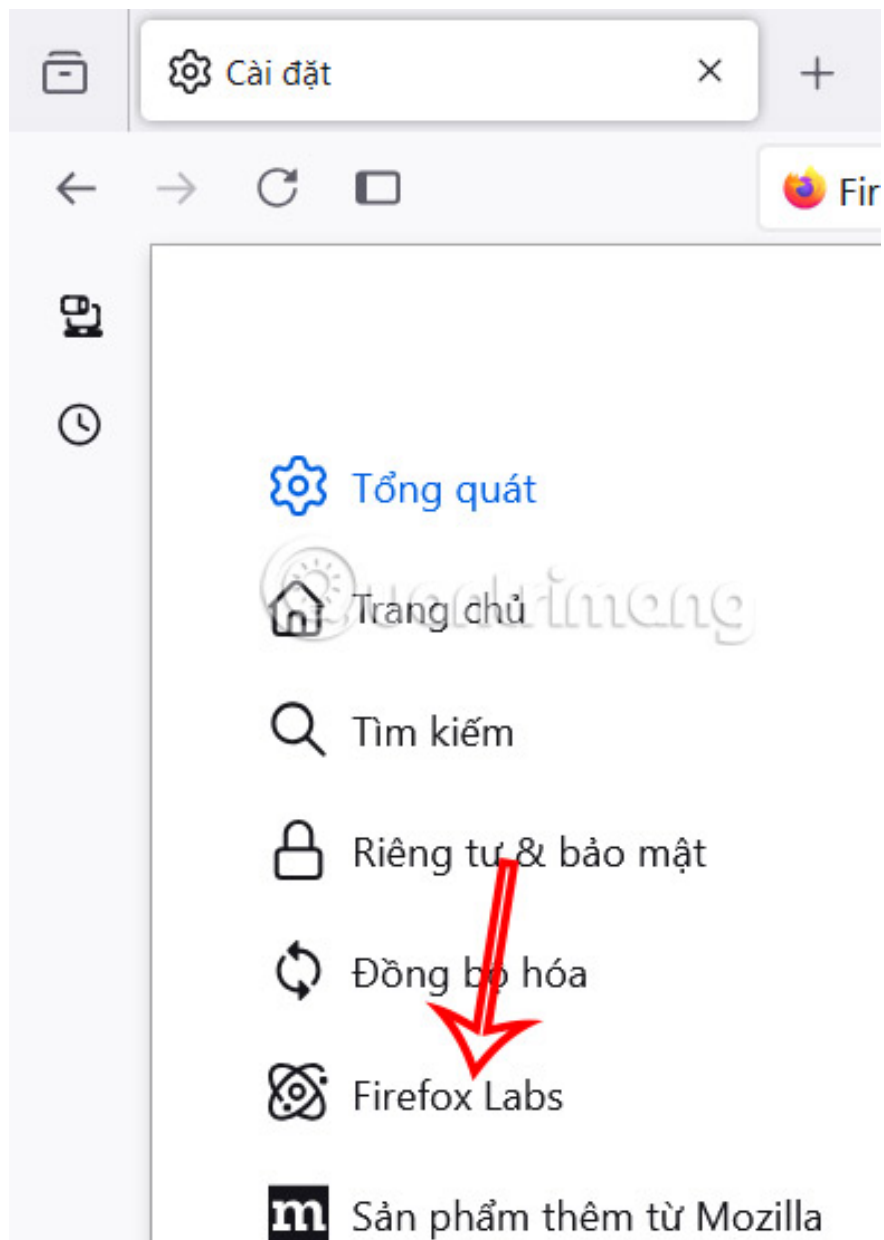

Step 1:

On the Firefox browser interface, click on **the 3-dash icon** , then click on **Settings** in the displayed list.

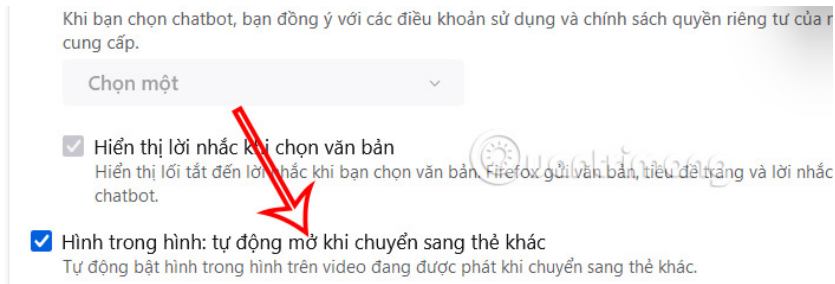

Step 2:

Switch to the new interface, click on **Firefox Labs** in the list on the left of the interface.

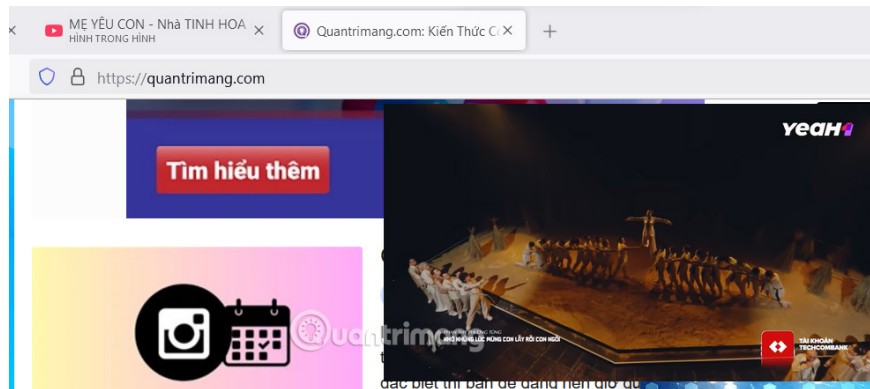

Step 3:

Continue looking at the content next to it, you **check the Picture-in-Picture setting: automatically open when switching to another tab** to automatically enable Picture-in-Picture on Firefox browser.

Step 3:

Now you access the video playing website on Firefox browser as usual, such as YouTube. Then you switch to another tab on the browser, the video automatically switches to Picture-in-Picture mode without you having to manually activate it.

Videos played in floating window mode have minimal controls that you can use to control the video. You can play, pause, move the video forward and backward, mute, resize the video player, and switch to full screen mode. If you return to YouTube or whatever site you were playing the video on, the PiP window will close and the video will start playing from the main window.
