

How to enable / disable network location indexing in Photos app on Windows 10

This tutorial will show you how to enable or disable indexing of library collections stored on network locations in the Microsoft Photos app on Windows 10.

Photos app in Windows 10

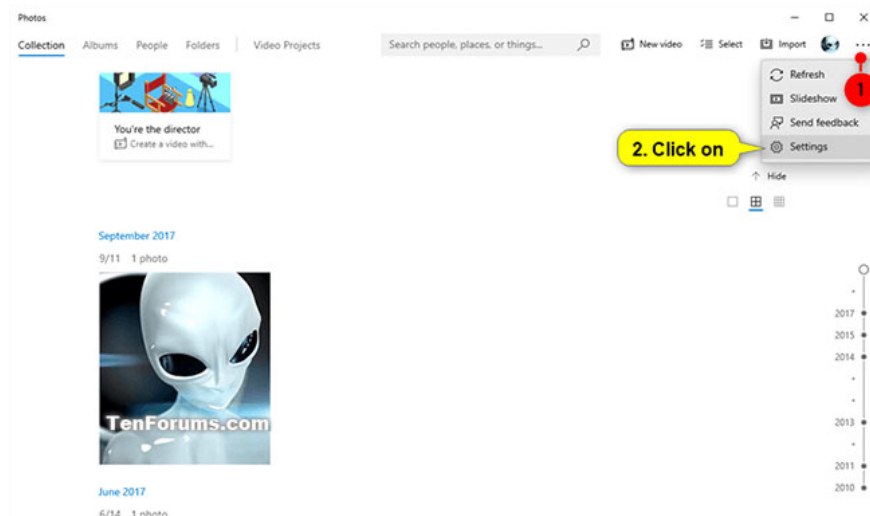

The Photos app included in Windows 10 is a universal app that lets you view, edit photos and videos, create movies and albums. You can use the video remix feature to create videos instantly from photos and videos you choose. Use the video editor to fine-tune - change filters, text, camera movements, music, etc. You can even add 3D effects like butterflies, lasers or explosion effects, to They magically appear in your videos.

Starting with the Photos application version 2020.20070.3003.0, a new indexing setting has been added, allowing you to enable or disable the indexing parts of libraries stored on network locations.

How to enable / disable network location indexing in Photos app on Windows 10

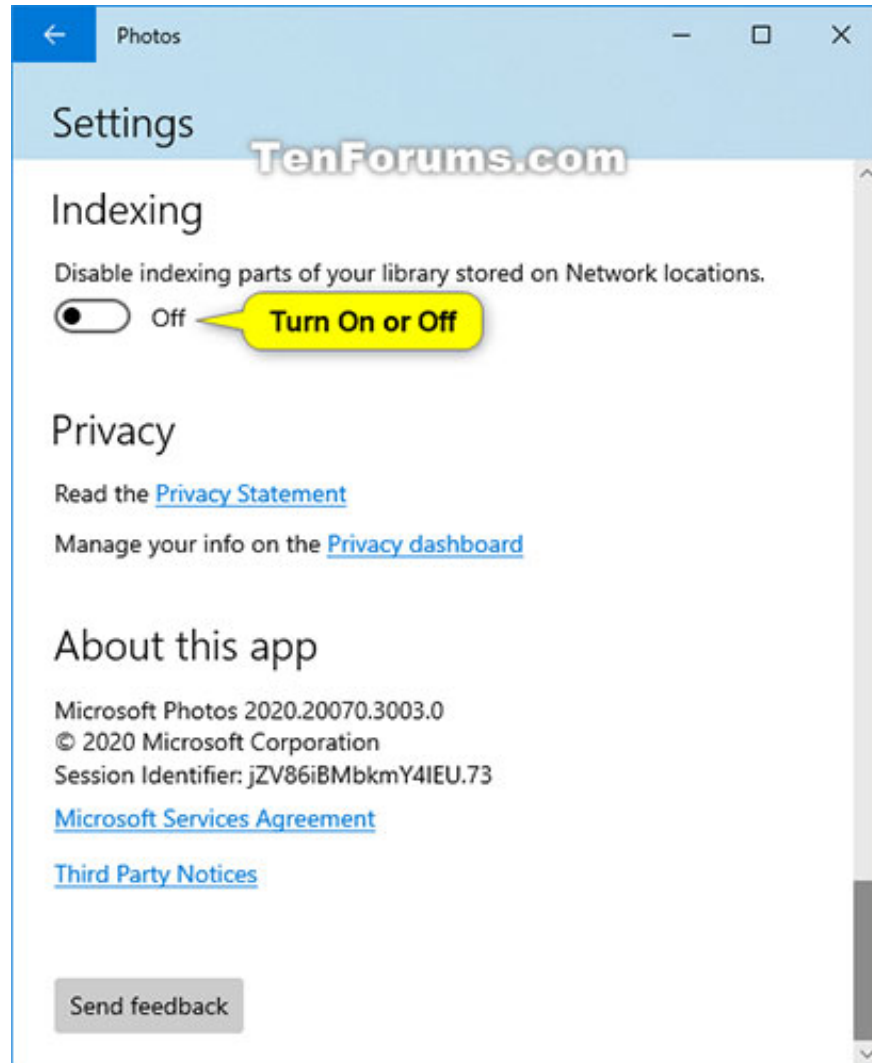

Here's how:

1. Open the Photos application.
2. Click the **See more** button (the 3 dot icon) in the top right corner and click on **Settings**.

Click the See more button (the 3 dot icon) in the top right corner and click on Settings

3. In the **Indexing** section , enable (default) or disable **Disable indexing parts of your library stored on Network locations** , depending on what you want to do.

Enable or disable Disable indexing parts of your library stored on Network locations
Hope you are succesful.
