

How to Enable Flash Player on Mac

This wikiHow shows you how to enable Flash Player on in Safari and Chrome for macOS. If you're using Safari, you'll need to download and install Adobe Flash Player from Adobe's website. If you're using Chrome, there's no need to install...

Method 1 of 2:

Enabling Flash on Safari

Install Adobe Flash Player from Adobe's website. Installing Adobe Flash Player on your Mac is needed because Flash is not built into Safari. Make sure you've installed the app before moving forward with this method.

2.

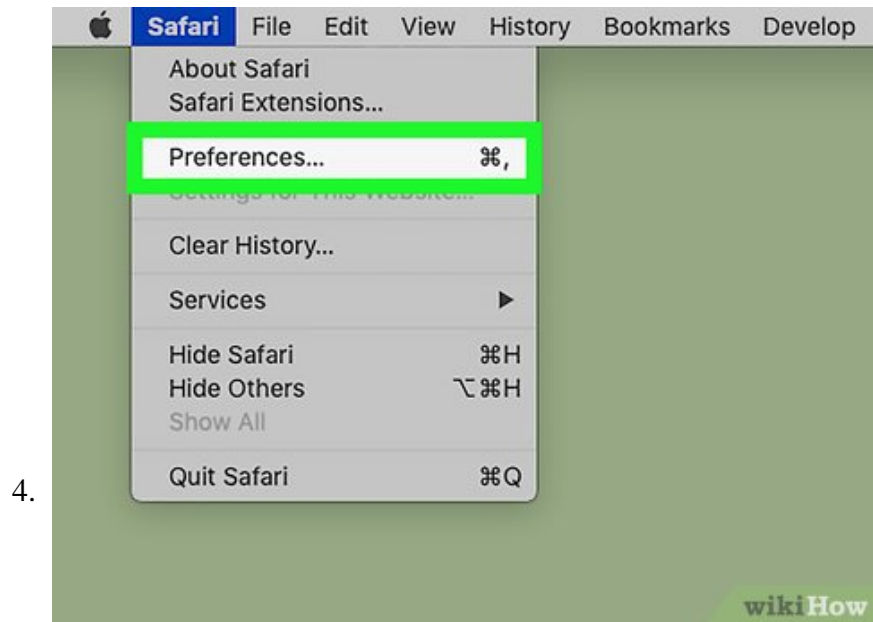

Open Safari. It's the compass icon on the Dock, which is usually at the bottom of the screen.

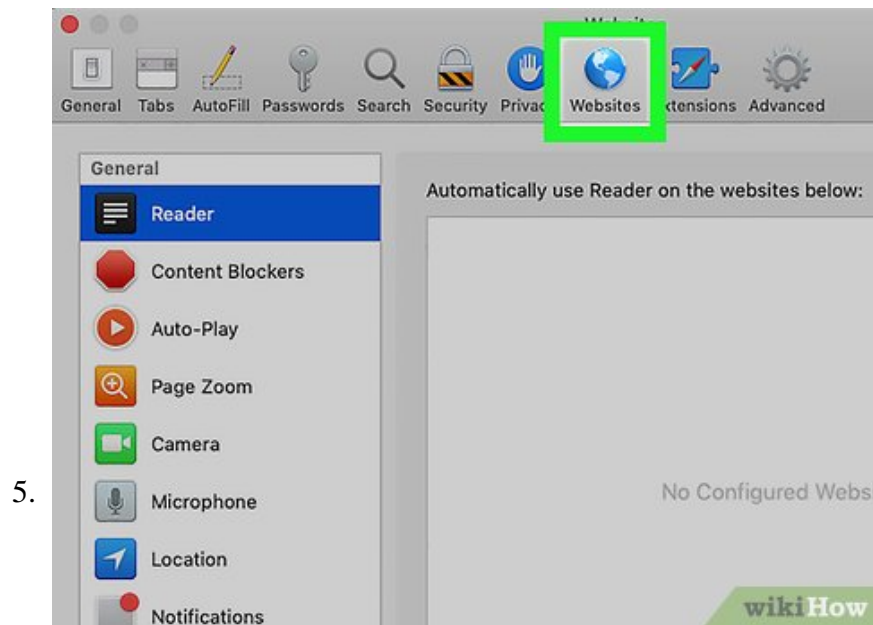

3.

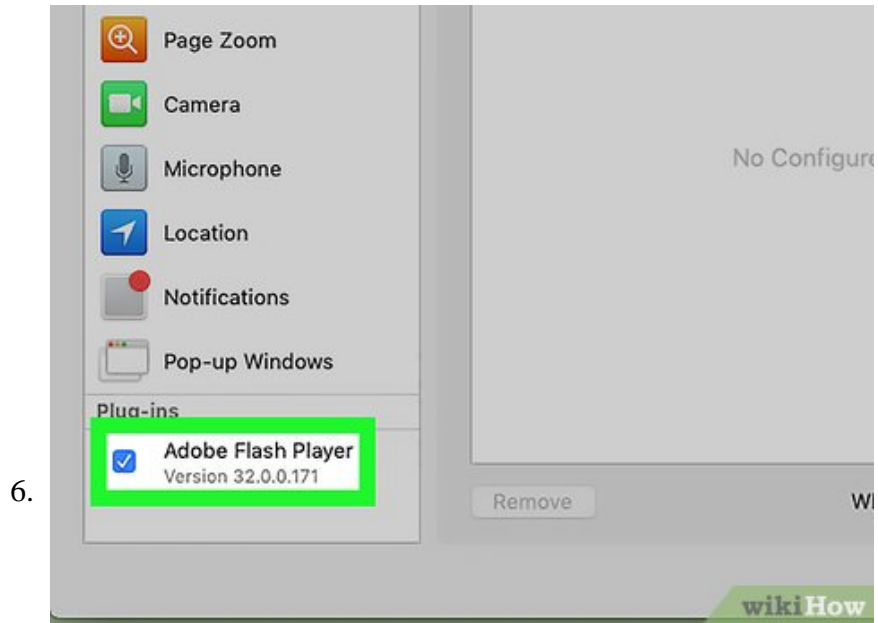

Click the Safari menu. It's at the top of the screen to the right of the Apple menu.

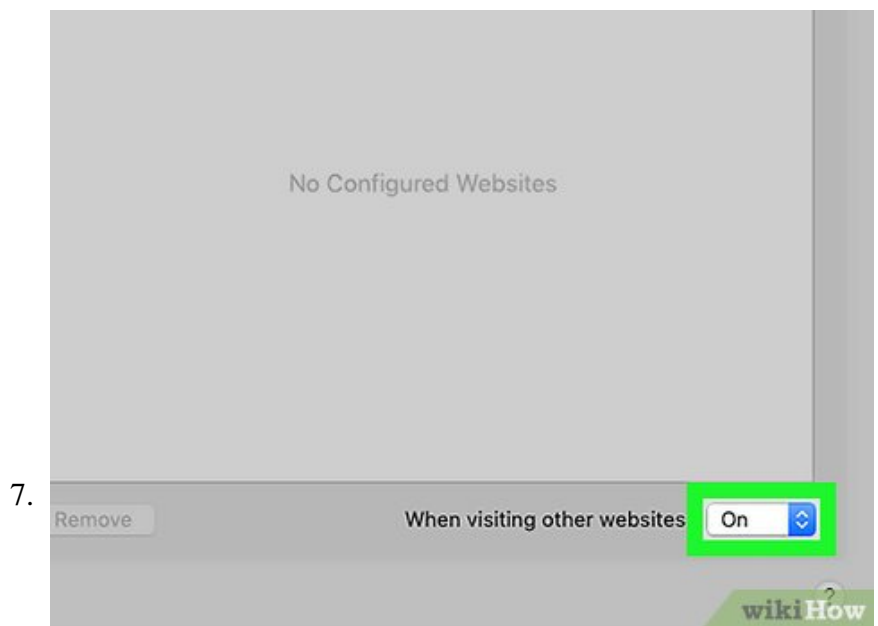

Click **Preferences**. It's near the top of the menu.

Click the **Websites** tab. It's the tab with a globe icon at the top of the window.^[1]

Check the box next to "Adobe Flash Player." It's at the bottom of the left panel under "Plug-ins." This will enable Adobe Flash Player in your Safari Browser.

Select from the 'When visiting other websites' menu. It's at the bottom-right corner of the window. This tells Adobe Flash Player to run whenever you visit different websites. This way you won't have to continuously approve Flash Player whenever you load a new page.

1. If you don't want Flash to run automatically, select instead. You'll be prompted to approve Flash any time a website tries to display it.
2. Click the red circle at the top-left corner to exit Preferences when you are done.

Method 2 of 2:

Enabling Flash on Google Chrome

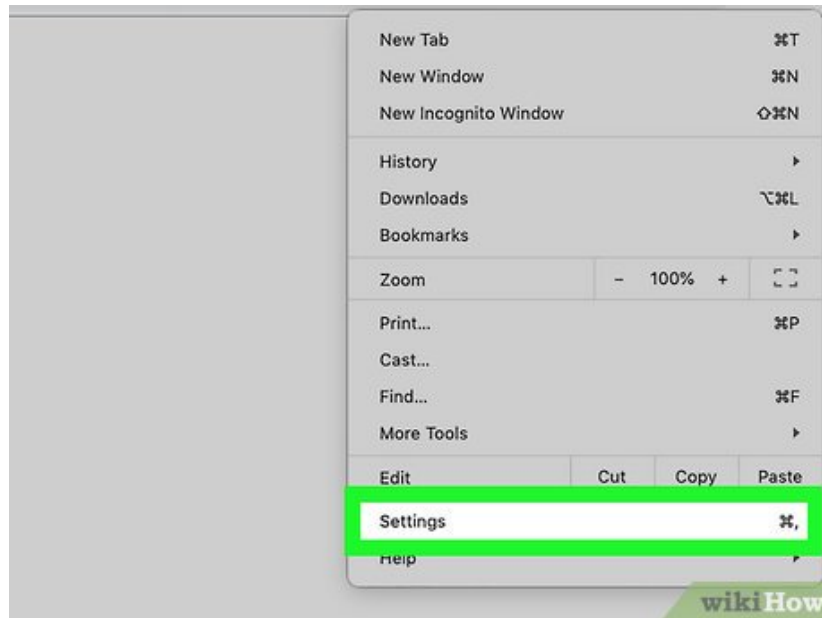

Open Google Chrome. You'll usually find it in the Applications folder or on the Launchpad.

1. Since Flash comes with Google Chrome, you won't need to download any extra apps.

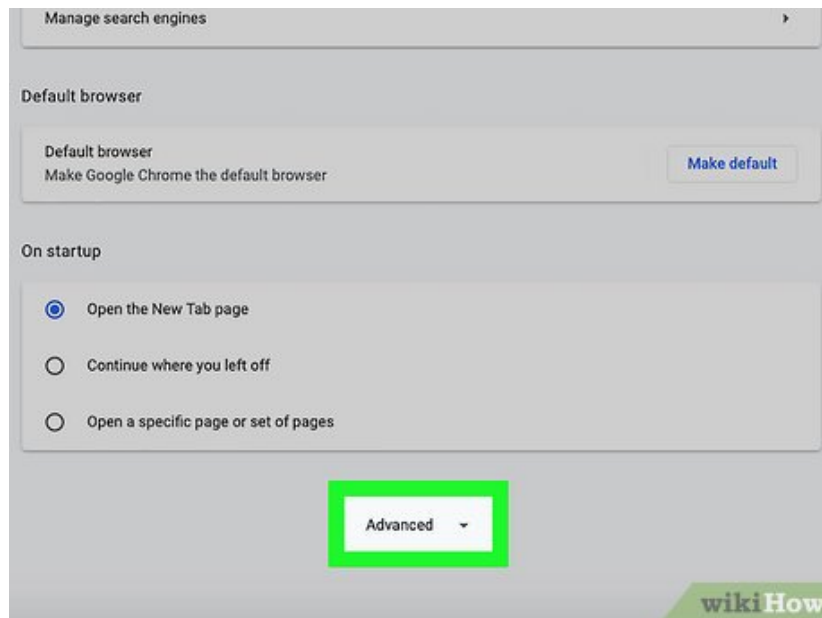

Click the menu in the top right corner.

3.

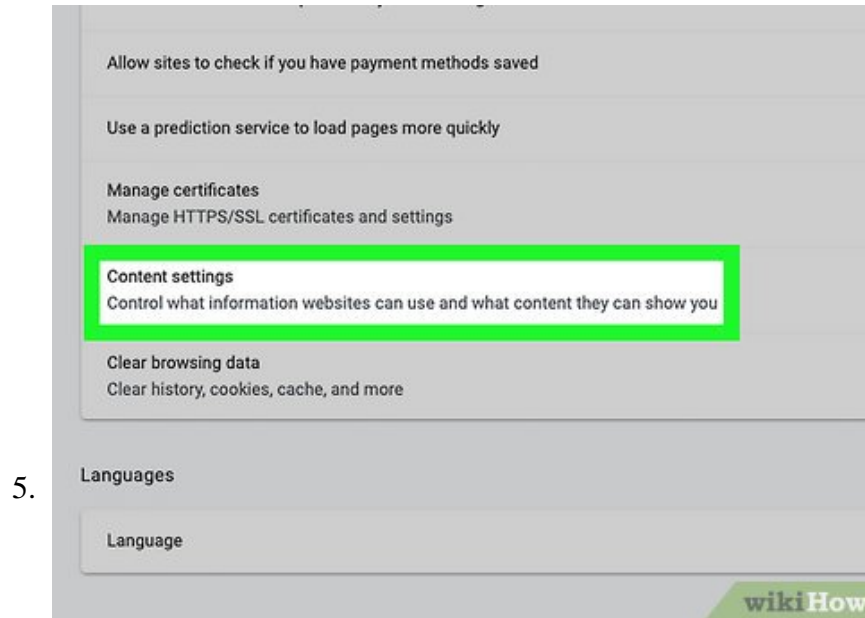

Select **Settings**. It should be near the bottom.

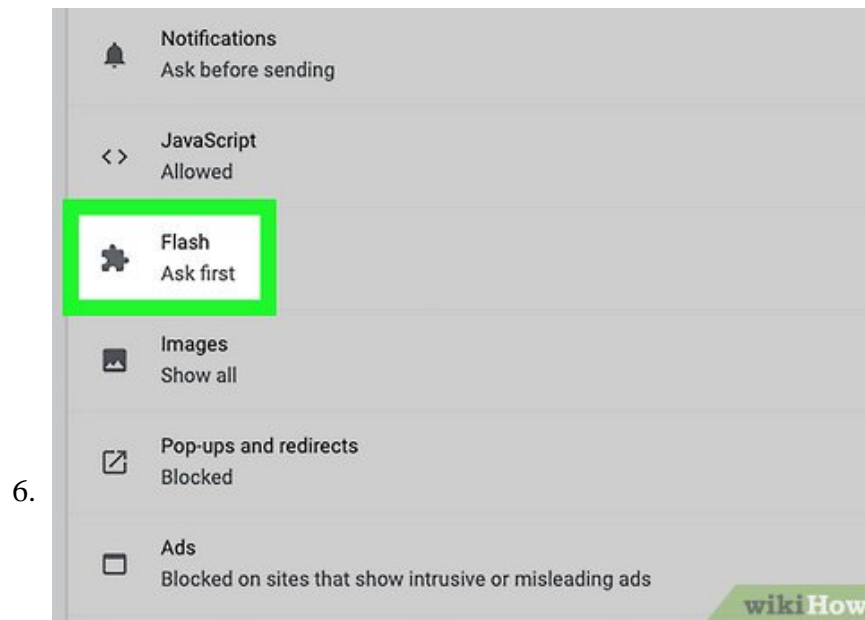

4.

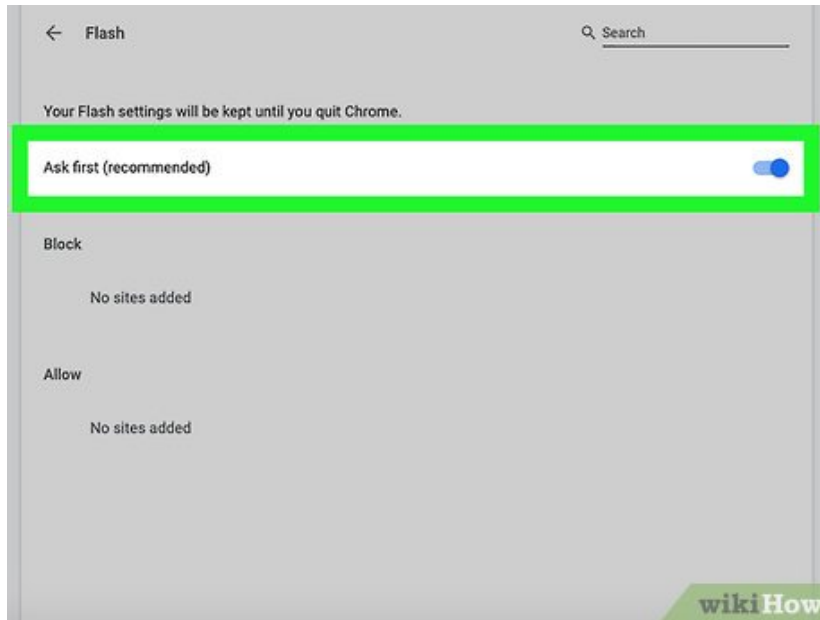

Click **Advanced**. It should be near the bottom when you scroll down.

Select **Content Settings**. It will also be near the bottom after scrolling.

Click **Flash** in the menu.

7.

Slide the switch to the On

position. It will be blue when it's on.

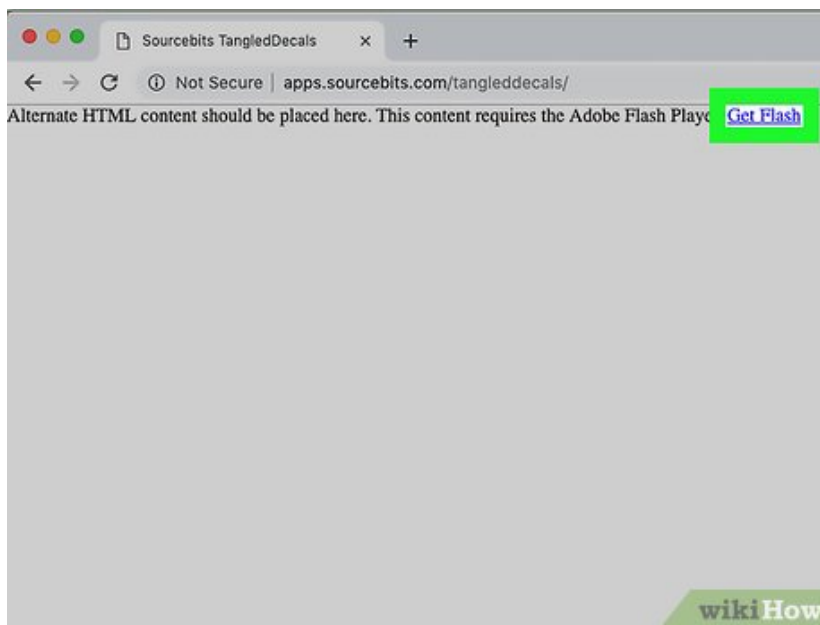

1. If the switch is already blue then Flash is enabled and you won't need to change anything.

8.

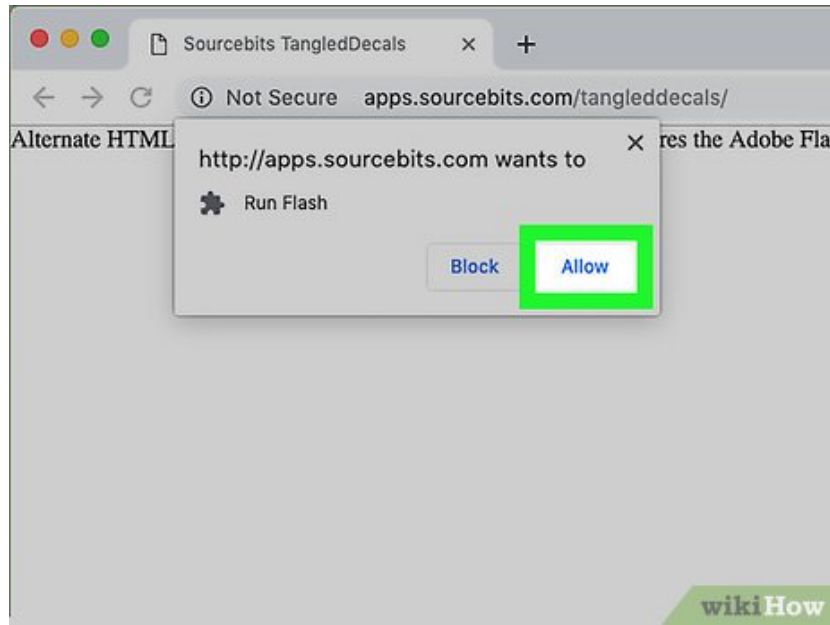

Visit a site that uses Flash Player. Websites with video or embedded games typically use Flash Player.

9.

Click **Click to Enable Adobe Flash Player** when it appears. It will come up with an image of a puzzle piece.

10.

Click **Allow** to enable Flash Player for that site. You'll need to do this every time you open Chrome as it will reset the settings when you exit.
