

How to enlarge computer screen with simple keyboard

Enlarging the computer screen using the keyboard is a convenient trick that many people use while using the computer.

How to enlarge the computer screen with the keyboard is a convenient trick that many people use during the use of the computer. Besides, you can also perform a simple way to enlarge the computer screen with the keyboard. If you do not know these operations, please follow the instructions below for both regular Windows computers or MacBooks.

How to enlarge computer screen using keyboard

If the computer you are using is a regular Windows operating system, then the way to enlarge the computer screen using the keyboard will be done easily. To proceed to enlarge the computer screen using the keyboard using the Windows operating system, please follow the two following ways:

Method 1: Hold down the Ctrl key and at the same time roll the mouse ball forward, the computer screen will immediately enlarge all windows. Note that if you apply the method of enlarging the **computer screen** using the keyboard Ctrl key with the + key, the screen will only be enlarged while you are browsing the web.

Method 2: Use Magnifier software to enlarge the screen that is pre-installed in the system from Windows 7 and above. To use this application, please do the following:

Step 1: Search on Windows and type the keyword Magnifier in the search box > Click on the Magnifier application to launch the program. In addition, you can also use the Windows key combination and the + key to open this software more simply and quickly.

Step 2: After successfully opening the application, a small rectangular box will appear on the computer screen. You have two options: + to enlarge or - to shrink the screen. Especially in the Views section, there will be 3 options:

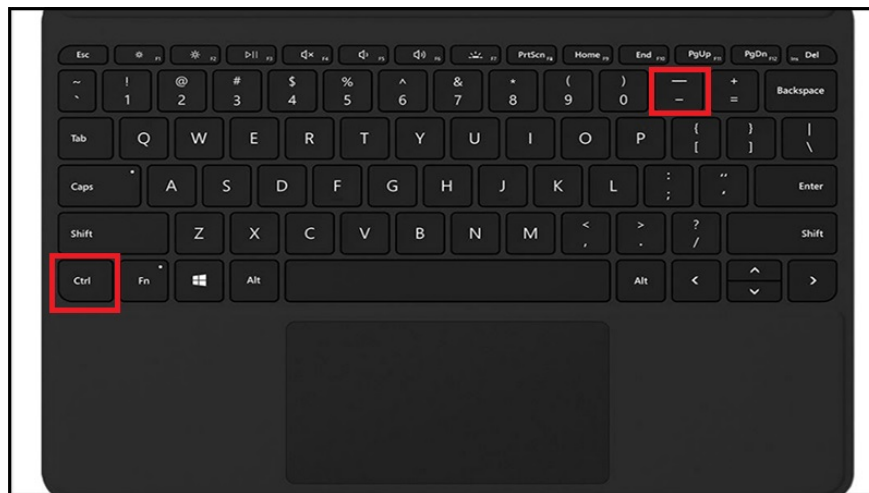

- *Full Screen:* The entire screen will be enlarged according to the ratio selected by the user.
Lens: The position the mouse pointer is pointing at will be enlarged.

- *Docked:* Enlarges the content to display a corner at the top of the screen, the rest retains its original size.

Additionally, you can click on the Magnifier gear icon to access the application settings to adjust the display parameters according to your needs.

Minimize Windows operating system computer screen

Besides zooming in on the screen, you can also zoom out on your Windows computer screen. Hold down the Ctrl key and roll the ball on your mouse down, and the screen will gradually shrink. When the screen has shrunk, release the Ctrl key to stop this action.

In addition to the above method, you can also apply the method of holding down the Ctrl key with the - sign to minimize the screen while surfing the web.

With the use of Magnifier as zooming in, the minimum display level of the screen is 100% so you cannot apply it to zooming out below this allowed level.

How to zoom in and out on MacBook screen

Method 1: Use Command + or -

Once zoom is enabled, you're ready to get started. If it's not enabled, follow the steps below.

Step 1: Press the key combination Option + Command + 8.

Once you have enabled the zoom function on your MacBook, you can use the following key combinations to zoom in or out:

Zoom out: Press Option + Command + "-" key combination.

Zoom in: Press Option + Command + "+" sign.

Method 2: Use the zoom feature

Step 1: Select System Preferences > Click Accessibility.

Step 2: Select Zoom > Enable shortcut keys.

Use Touchpad to zoom in and out of the screen

Method 3: How to enlarge the computer screen using the Touchpad to enlarge/reduce the screen.

Method 1:

Zoom out: Move 2 fingers on the Touchpad closer.

Zoom in: Move 2 fingers on the Touchpad away.

Method 2: Use the mouse wheel.

Zoom in: Hold Ctrl and roll the mouse wheel up.

Zoom out: Hold Ctrl and roll the mouse wheel down.

Conclude:
