

# How to enter a text into multiple Excel cells at the same time

While using Microsoft Excel, users may need to enter the same values ??as text, data into multiple cells or enter the same formula into an entire column (avoid entering the case one by one).

While using Microsoft Excel, users can enter the same values ??as text, data into multiple cells or enter the same formula into an entire column (avoid having to enter one by one). In this tutorial, TipsMake.com will show you how to quickly enter the same data or formula into cells.

## Enter data into multiple cells at once with Ctrl + Enter in Excel

To enter the same data in the boxes, please do the following.

1. Select multiple cells that you want to enter the same data by holding down the **Ctrl** key .
2. After selecting, press the **Space** key and the last selected cell will be in edit mode.
3. Enter data or text in the box, then press **Ctrl + Enter** .

	A	B	C	D	E
1	344	386	244	410	432
2	321	same data	222	392	110
3	same data	115	411	108	398
4	360	238	same data	139	413
5	246	378	244	111	235
6	325	134	363	same data	same data

**Note** : If the selected cells already have content, it will replace all the contents of the selected cells with the same data after pressing **Ctrl + Enter** .

After completing the above steps, the text will automatically be entered in all highlighted cells. This tip can be very useful whenever you have the same data type prefix and just need to add something at the end of each cell.

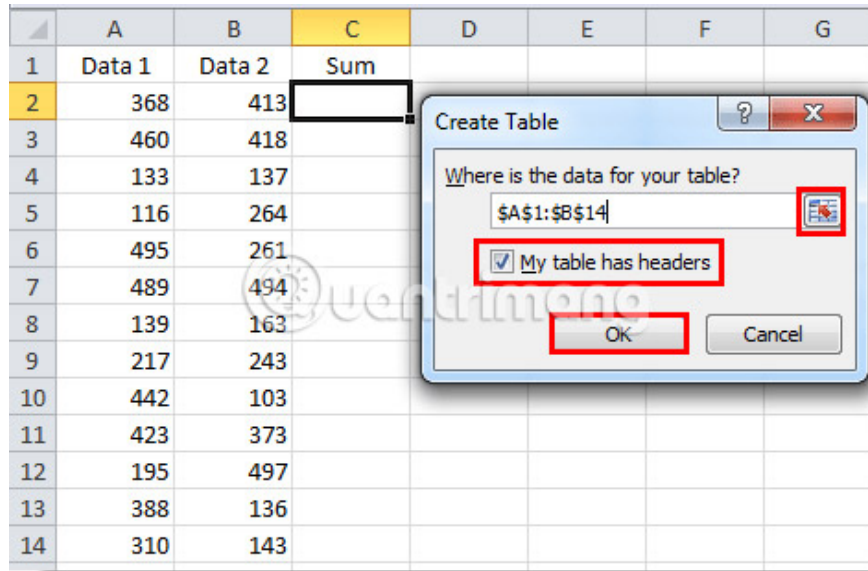

## Enter the formula in the entire column with the Enter key in Excel

Suppose you have data in columns **A** and **B** , then want to aggregate these data in column **C** with the **Enter** key .  
Do the following.

	A	B	C
1	Data 1	Data 2	Sum
2	368	413	
3	460	418	
4	133	137	
5	116	264	
6	495	261	
7	489	494	
8	139	163	
9	217	243	
10	442	103	
11	423	373	
12	195	497	
13	388	136	
14	310	143	

1. Select **C2** and press **Ctrl + T**.
2. In the **Create Table** dialog box that appears, select the range of data you want to sum and click the **OK** button .

**Note** : If there are data titles in the selected range, select the **My table** box that **has headers** .

3. Select column B and right click on it. Then select **Insert> Table Column to the Right** in the right-click menu.

4. You can change the title of the new column by selecting it and entering a new name in the **Formula Bar**, then press the **Enter** key .

	A	B	C
1	Data 1	Data 2	Data
2	368	413	
3	460	418	
4	133	137	
5	116	264	
6	495	261	
7	489	494	
8	139	163	
9	217	243	
10	442	103	
11	423	373	
12	195	497	
13	388	136	
14	310	143	

5. Select the first cell of the new column (in the example is cell C2). Enter the formula in this box, then press the **Enter** key .

	A	B	C	D
1	Data 1	Data 2	Sum	
2	368	413		
3	460	418		
4	133	137		
5	116	264		
6	495	261		
7	489	494		
8	139	163		
9	217	243		
10	442	103		
11	423	373		
12	195	497		
13	388	136		
14	310	143		

After pressing the **Enter** key , all cells in this specified column will be filled in the same formula.

	A	B	C	D
1	Data 1	Data 2	Sum	
2	368	413	=A2+B2	
3	460	418		
4	133	137		
5	116	264		
6	495	261		
7	489	494		
8	139	163		
9	217	243		
10	442	103		
11	423	373		
12	195	497		
13	388	136		
14	310	143		

Hope you are succesful.
