

How to enter formula data in Excel

Show you how to enter formula data in Excel. Working with Excel you can not help but work with formulas and functions in Excel. Formula data input is a type of data entry through data that is available based on a calculation or 1

The following article shows you how to enter formula data in Excel.

Working with Excel you can not help but work with formulas and functions in Excel. Formula data input is a type of data entry through existing data based on a calculation or a function. To calculate data by formula type follow these steps:

Step 1: To start with the formula input type, it is mandatory to start with equal oil. In the cell to enter data type formula press the equal sign:

Step 2: Next enter the type of formula that makes up the data. For example, the revenue here is calculated by the number of * unit prices -> enter the formula = [@ [Unit Price]] * [@ [Quantity]] (because the table is in the table so the formula is in the title of the column)

Danh sách nhân viên bán hàng
