How to export video (encode video) in Aegisub with MeGUI software. In the previous article, ThuThuThuanSoft.vn has taught you how to create sub videos for Aegisub. Now it's time to export videos with all your photos, music, and sub into one. We will do it

In the previous article, ThuThuThuanSoft.vn has taught you how to create sub videos for Aegisub. Now it's time to export videos with all your photos, music, and sub into one. We will do that with the MeGUI software.

The following is a tutorial on how to export video (encode video) in Aegisub using MeGUI software.

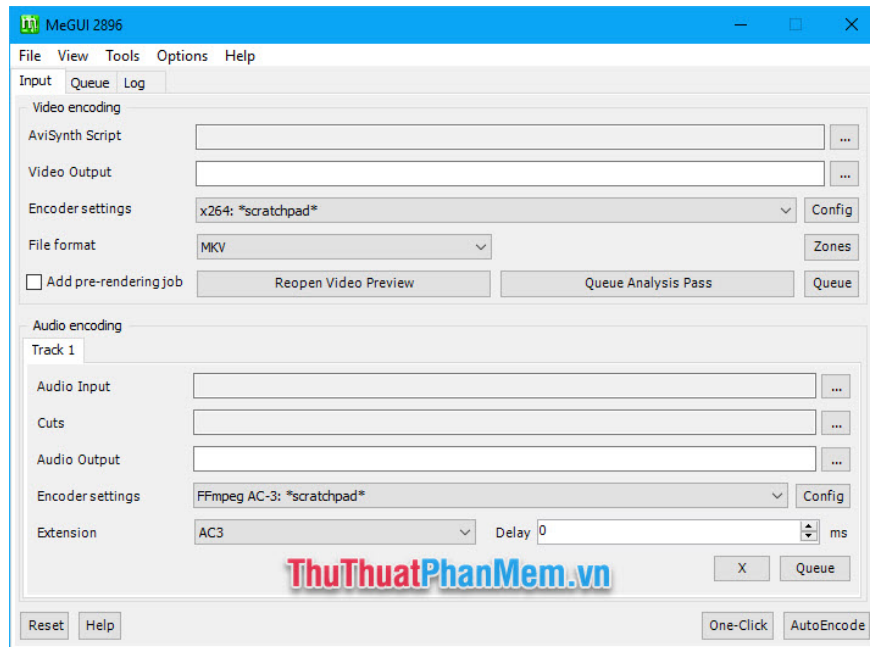

## How to export video (encode video) in Aegisub with MeGui software

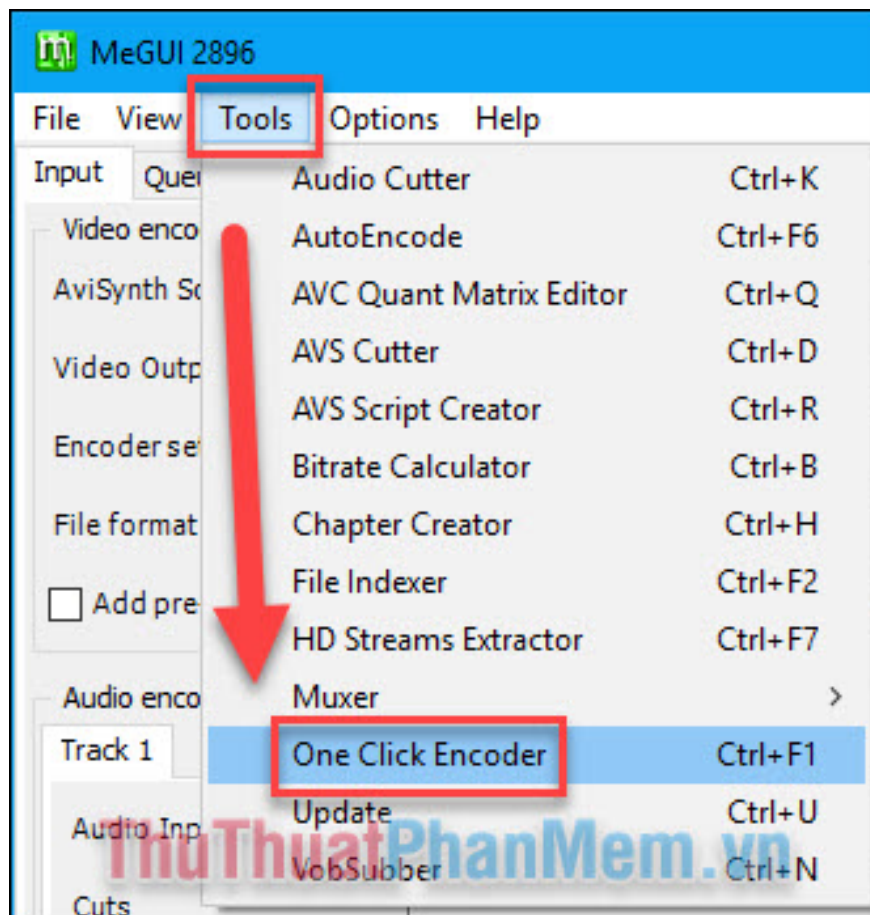

Step 1: Download MeGUI software [here](#).

If the software process fails, try installing additional .NET Framework 4.0 and K-Lite Codec.

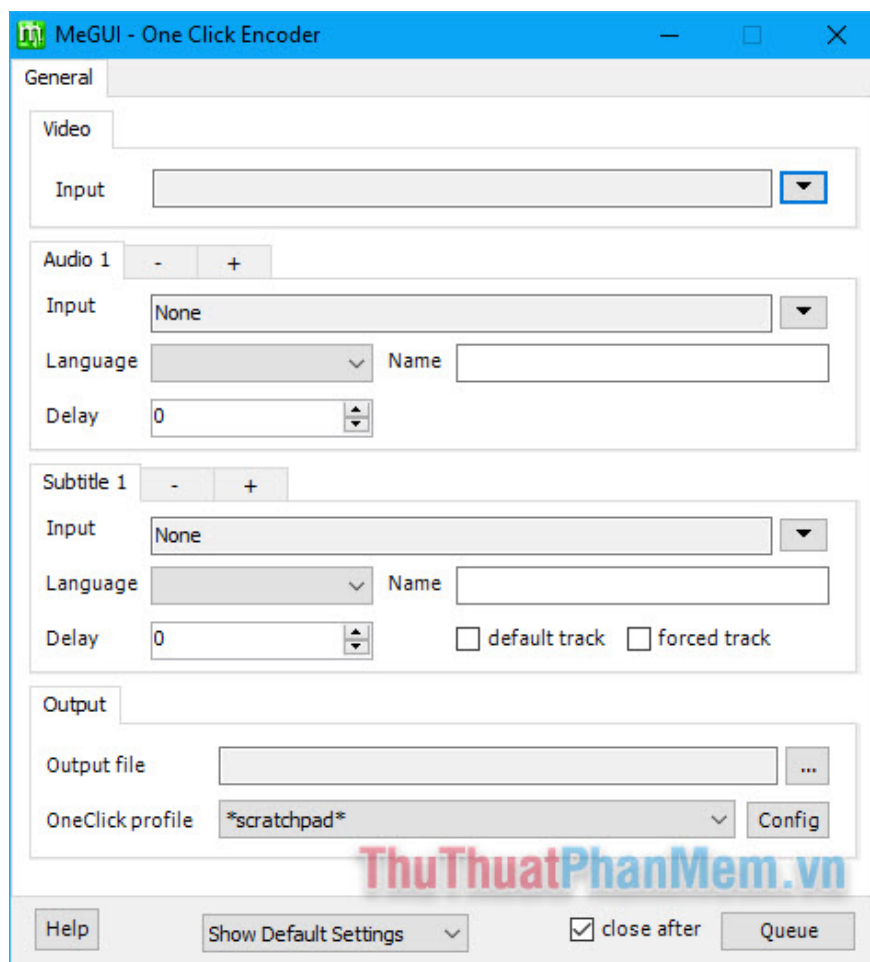

You open MeGUI software with the main interface as follows:

Step 2: Choose Tools >> One Click Encoder.

The interface of the One Click Encoder tool will appear:

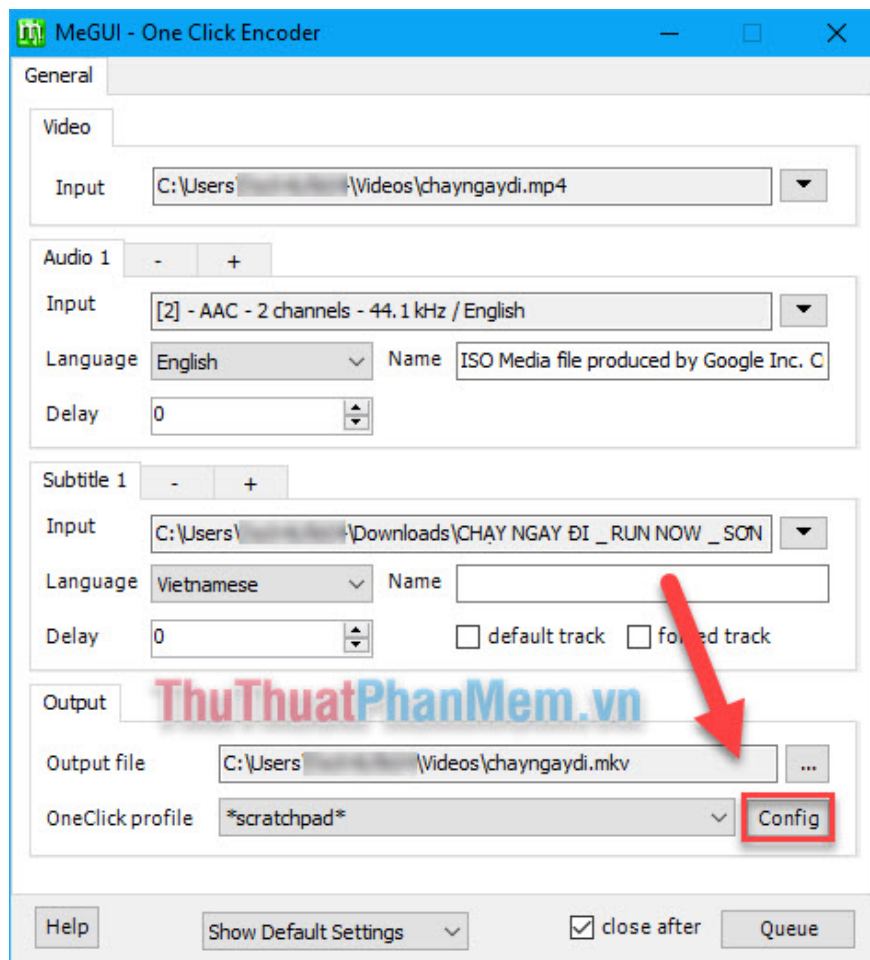

Here you will have the following options to add files:

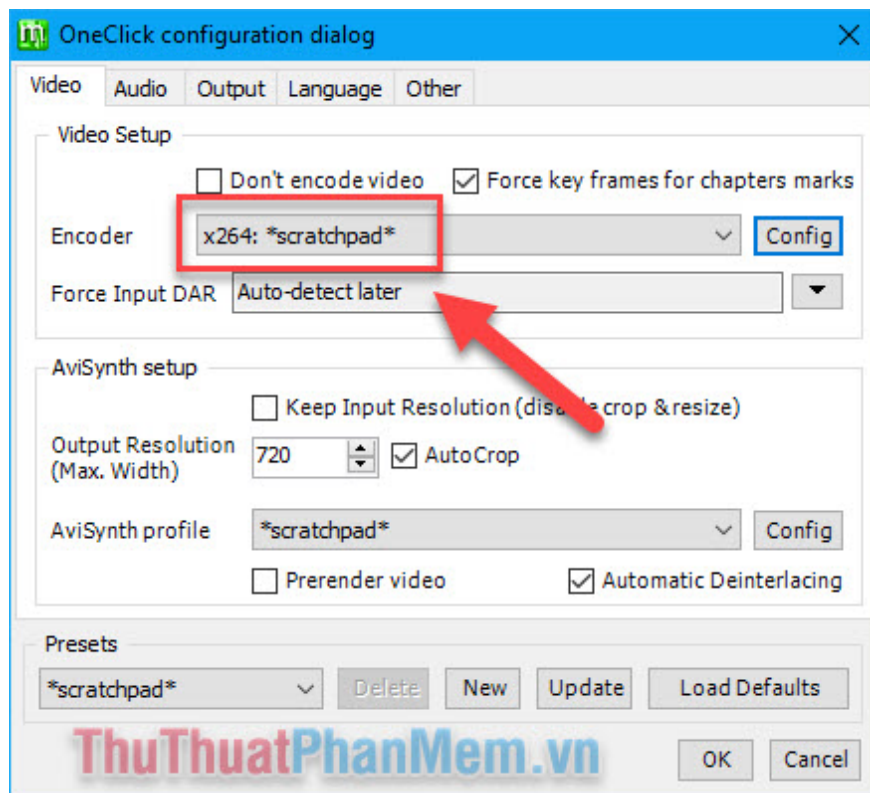

1. Video Input: The video you want to insert sub. Click the arrow icon to add Video.
2. Audio 1: The audio you need to insert into the video, if the video already has audio, it will automatically be added here.
3. Subtitle 1: Sub file created with Aegisub, you can add multiple sub at the same time.
4. Output: The output video format, usually Mp4.

Step 3: You proceed to insert the desired input files by clicking the arrow icon next to each item.

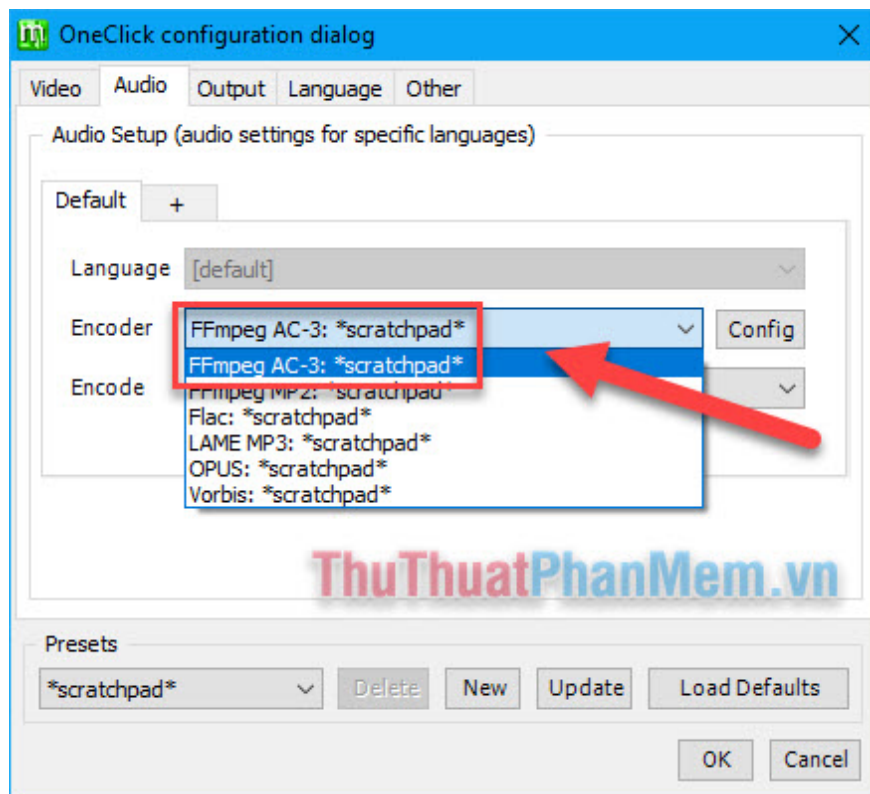

Go to Output and click Config to set some properties of the output.

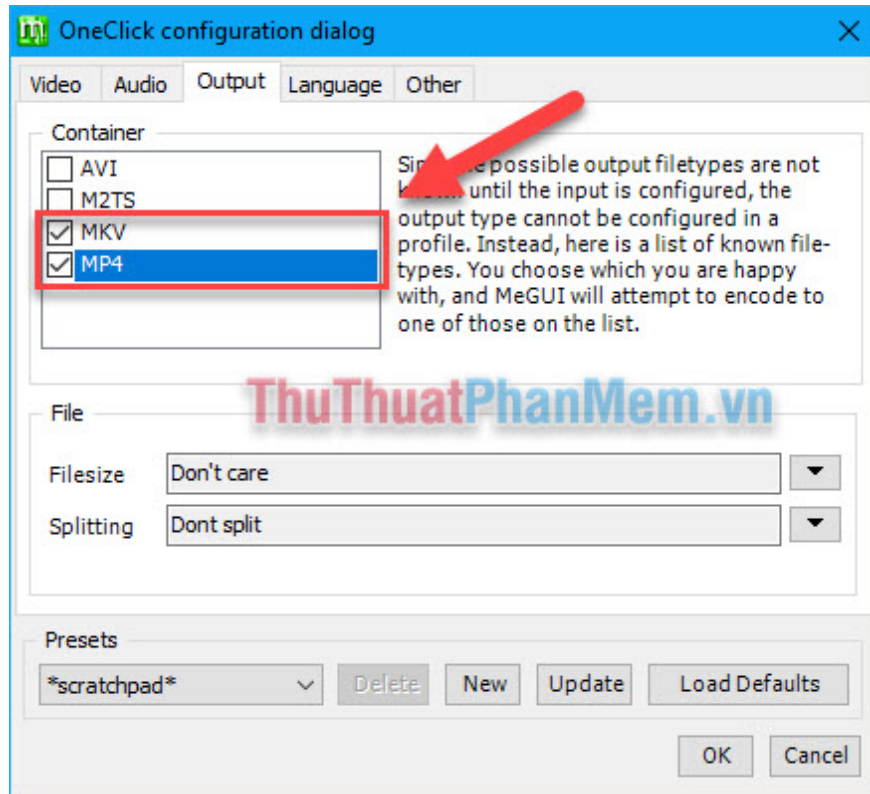

You choose Encoder x264 or XviD.

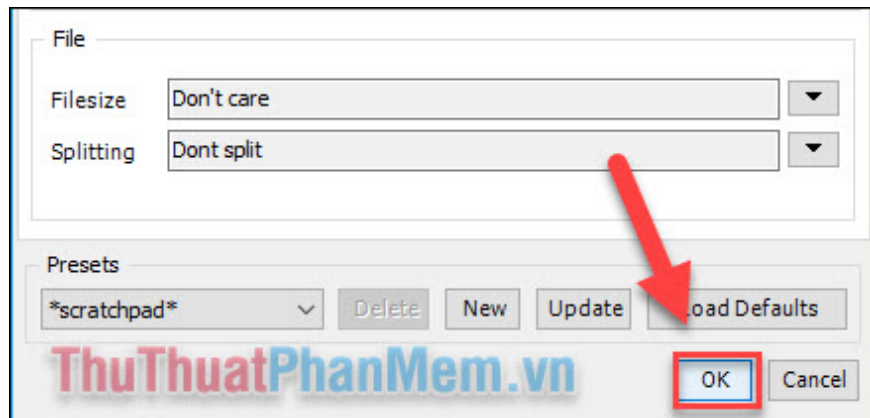

Moving on to the Audio card, you can leave the Codec as FFmpeg AC-3 by default.

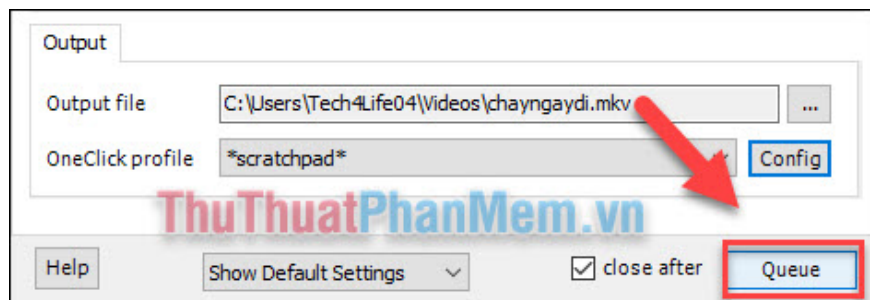

Go to Output tab, select the output format for video file. The default format is .MKV to avoid errors, or .MP4 is the most preferred video format.

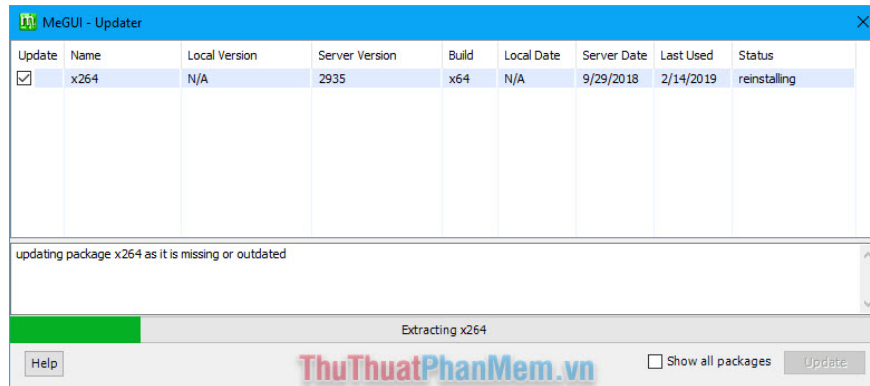

Click OK to return to the One Click Encoder interface.

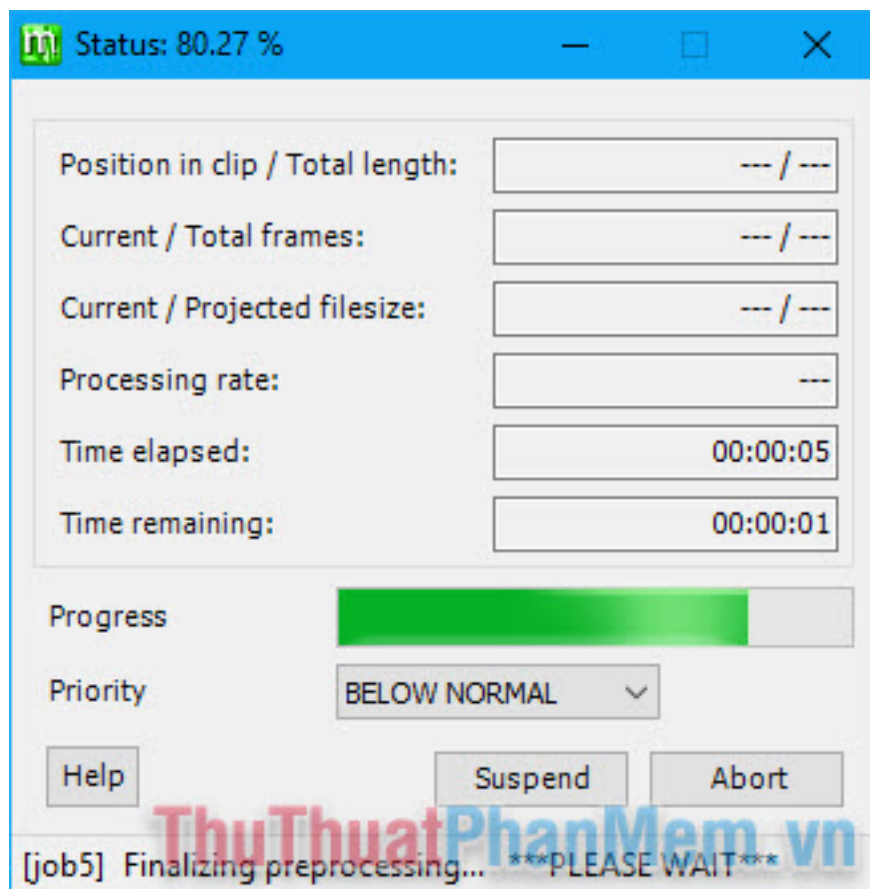

Step 4: Continue to click Queue to start the process of exporting videos with your sub.

If any utilities have not been installed, let MeGUI automatically install it.

Wait for the file export process to succeed and you can enjoy your work.

Above is a guide on how to export video (encode video) in Aegisub with MeGUI software, wish you a successful practice!
