

How to filter YouTube subscription data sources on iPhone and iPad

It is better if you can customize your feed to show only the latest videos or videos that you cannot watch because of a busy schedule.

If you like watching YouTube videos, you may already have subscribed to lots of channels. But have you ever wished you had a better way to customize your disordered registry?

It is better if you can customize your feed to show only the latest videos or videos that you cannot watch because of a busy schedule. Turns out, Google has found a good way to let you filter your YouTube subscription data sources on iPhone and iPad. Let's find out through the following article!

Filter subscription feeds on YouTube for iPhone and iPad

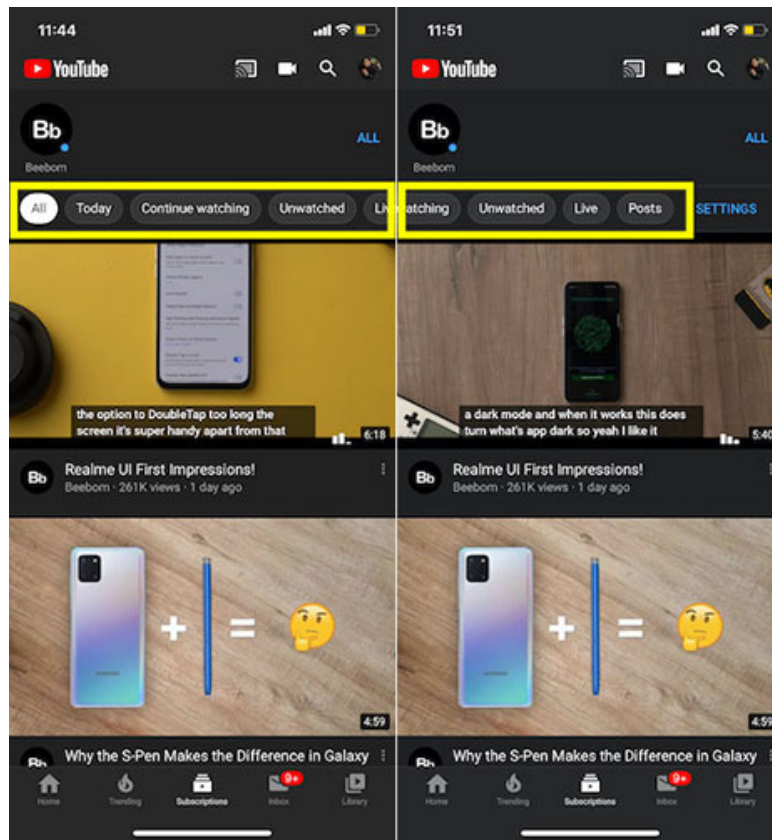

The YouTube app for iOS has recently been updated to add a new feature called **Topics** . With a variety of filtering options, it allows users to tweak subscription feeds according to specific interests. In addition, this feature provides a way to make the feed display only videos or both videos and community posts.

1. Make sure the device is running the latest version of the YouTube app (open **App Store** > **Profile** > find **YouTube** and update it as usual). After you've updated the app, launch it and click on the **Subscriptions** tab at the bottom.

Click the Subscriptions tab

2. Now, you will see many filters in the top row of the channels being watched.

Filters

1. **All:** Selected by default and shows all videos from the channels you are subscribed to.
2. **Today:** Show all videos published in the last 24 hours.
3. **Continue Watching:** Display videos you have not yet finished watching.
4. **Unwatched:** List all the videos you have watched.
5. **Live:** Display **live** video and YouTube Premieres.
6. **Posts:** Sort the community posts from the channels you are subscribed to.

Choose the preferred option. Soon, the app will list videos based on how you have filtered your subscriptions.

If you want to go back to the old reverse chronological order, tap the **Subscriptions** tab and select the **All** option

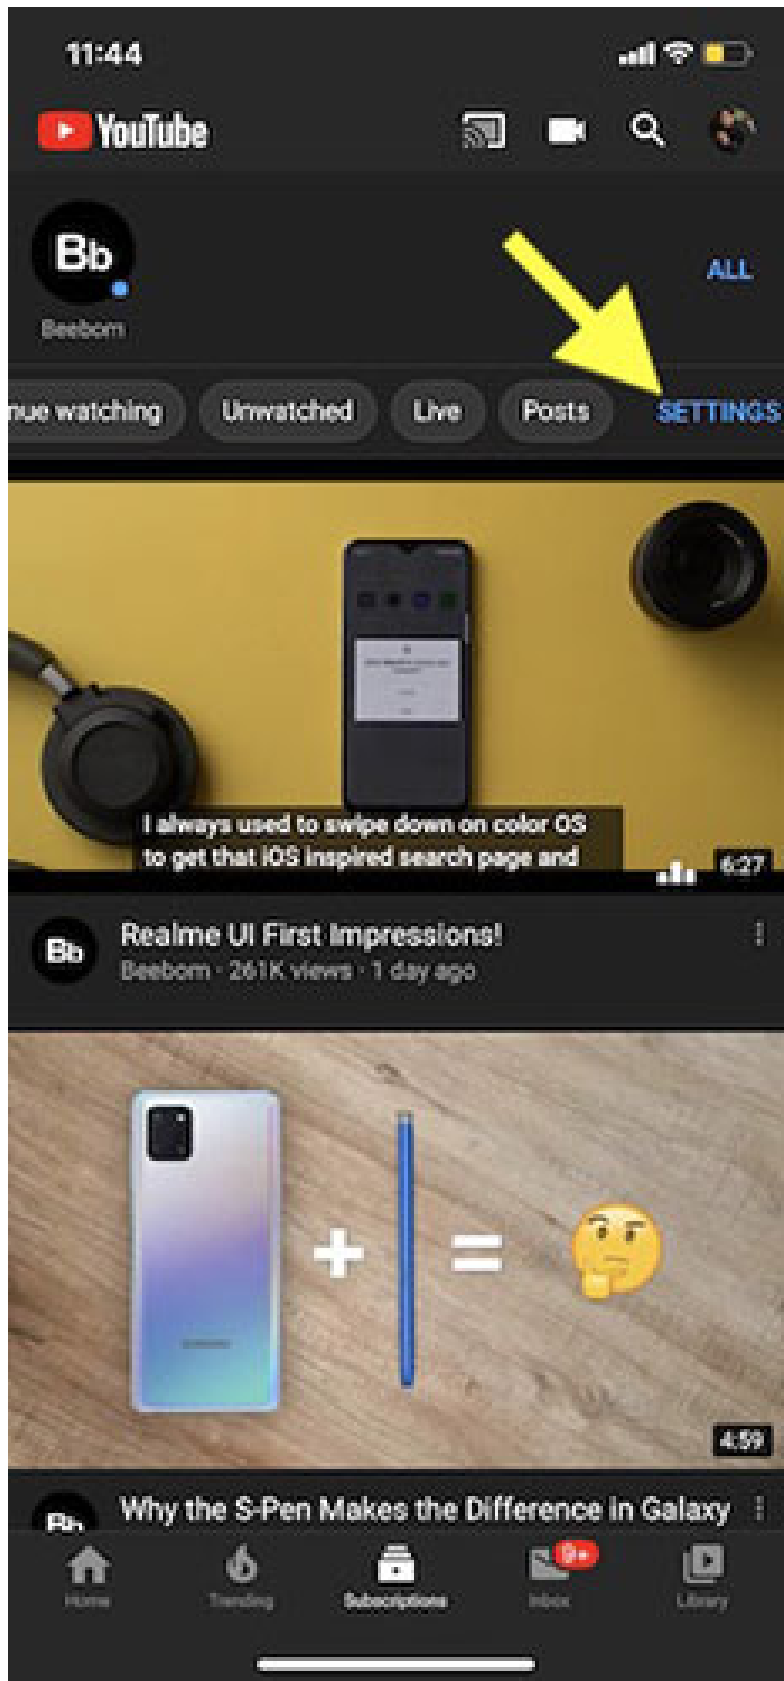

As a YouTube subscription source shows both videos and posts or just videos

1. Launch the YouTube app on the device, then press the **Subscriptions** tab .

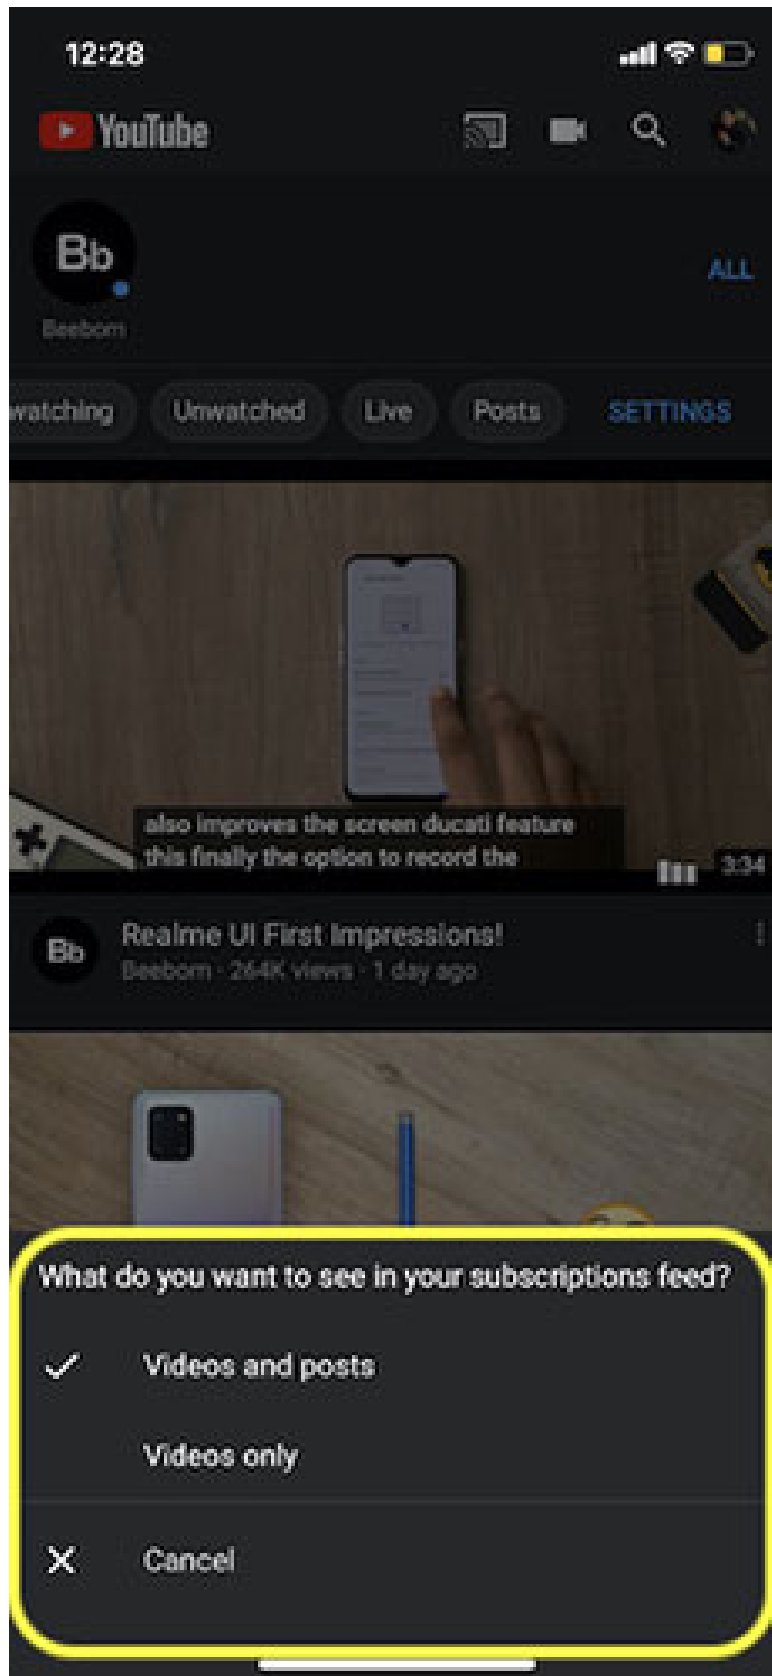

Launch the YouTube app

2. Now, swipe left from right on the carousel (the horizontal bar contains filtering options) to display the **Settings** option and click on it.

Make the Settings option display

3. Next, you have 2 options:

You have 2 options Videos and posts and Videos only

1. **Videos and posts** : Displays both videos and community posts in the subscription feed. It is marked by default.
2. **Videos only**: Make the feed display only videos.

Choose the option you want.
