

Look for the exterior paint color codes on the information sticker. In some vehicles, the codes for your car's paint colors will be clearly labelled "VIN". Scan through the information on the sticker to find codes specifically listed for paint or color. These codes may be separated into the body color and trim color, which are sometimes different.^[3]

1. The number of letters or numbers in the specific color codes will vary between manufacturers.

Look for a "C" code if you don't see the words "paint" or "color." In some vehicles, the paint color codes will be identified only with an abbreviation or shorthand. Look for the letter "C" which usually indicates color. You may also see the abbreviation "Tr" indicating the color of the trim on your car.^[4]

Method 2 of 2:

Finding Your Car's Vehicle Identification Number

Look for the 17-character VIN on your vehicle title. Your vehicle title is the legal document you receive when purchasing a car that lists you as its owner. This document will feature important information about your car, such as the make, year of manufacture, and current license plate number.^[5] Locate your vehicle title and look for a code with a combination of 17 letters and numbers.^[6]

1. There may be fewer characters in your VIN if your vehicle was manufactured before 1981.

Get the VIN from your vehicle registration certificate. Your registration certificate is proof that your vehicle is owned by you and registered to you. This document features information about the driver and the car, including the make and model of the vehicle and the year it was manufactured. Look for the VIN right after these other car details.^[7]

1. A car must be registered before it can be driven on public roads.

3.

Check your insurance papers to see if your VIN is listed. When you insure your vehicle, you have to provide information about it to the insurance company. As such, your VIN should be listed on your insurance policy and may appear on insurance documents that you receive by mail. Check your automobile insurance papers to look for the 17 character VIN.^[8]

1. Contact your insurance company for assistance if you can't find your paperwork.

4.

Search your car repair records if you have had work done. Knowing your car's VIN allows mechanics to find out precise details about how it was manufactured and what parts were used to build it. Check any repair receipts and records you may have to look for the VIN. The number may be written on these documents for reference.^[9]

1. You should keep copies of your car repair records to prove that you have done your part to keep your vehicle in good shape if you eventually want to sell it.

5.

Contact your car dealership or manufacturer to decode your VIN. Your VIN contains enough identifying information about your vehicle to track down its specific color code.^[10] Call or email your car dealership or manufacturer and ask them if they can provide you with your car color code. Provide your complete VIN as well as any other details they request, such as your name and contact information.
