

How to find contacts in new Gmail

The new Gmail has begun to roll out last week and it's great. But many people are wondering where its Contacts went.

The new Gmail has begun to roll out last week and it's great. But many people are wondering where its Contacts went. This article will show you how to find Contacts in new Gmail.

1. How to update the new Gmail interface if your Gmail has not been upgraded

The previous version of Gmail, now called " **Classic Gmail** ", has a drop-down menu at the top left for quick access to Contacts and Tasks.

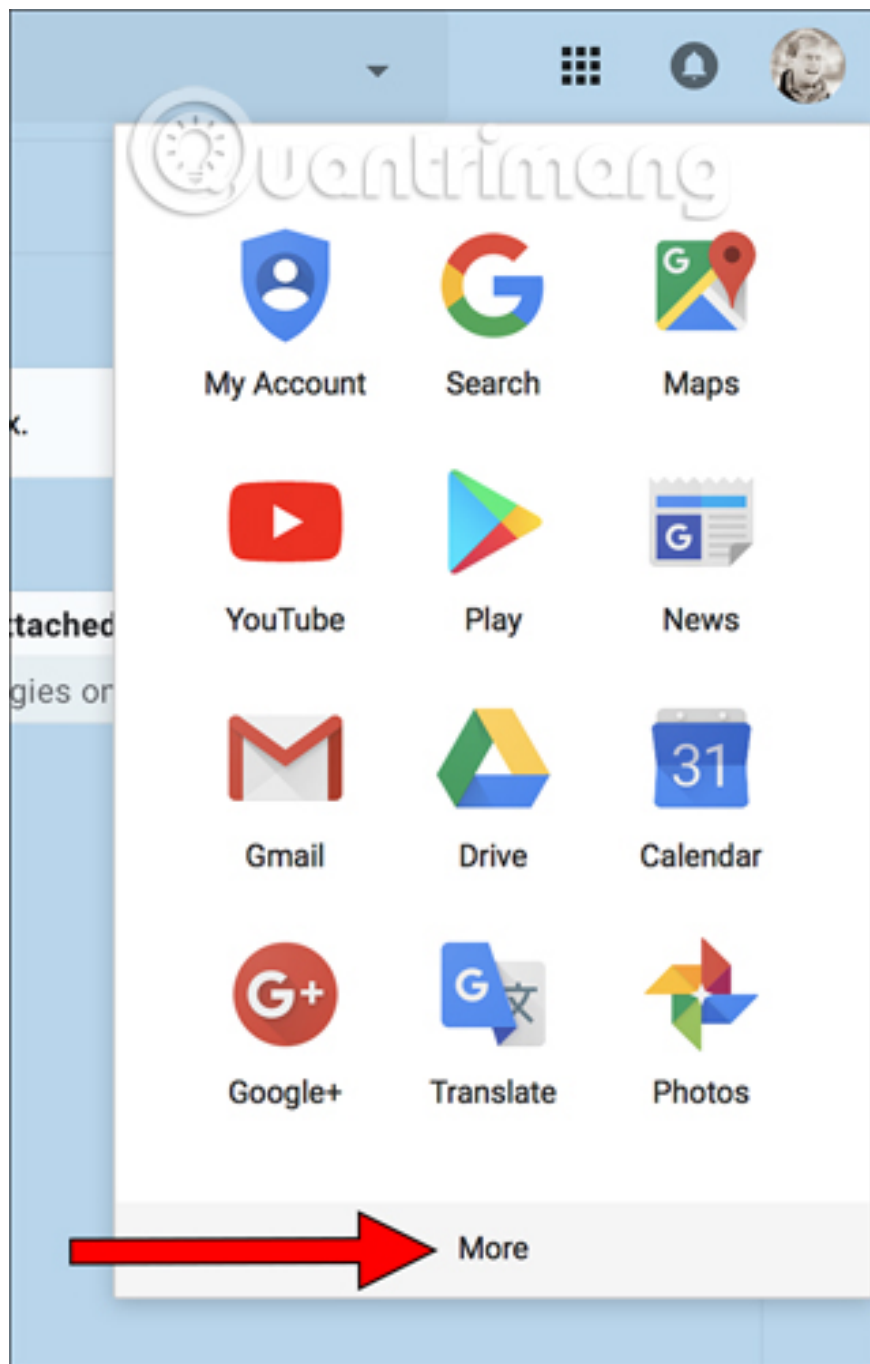

New design adds Tasks to the new panel on the right but where does Contacts go?

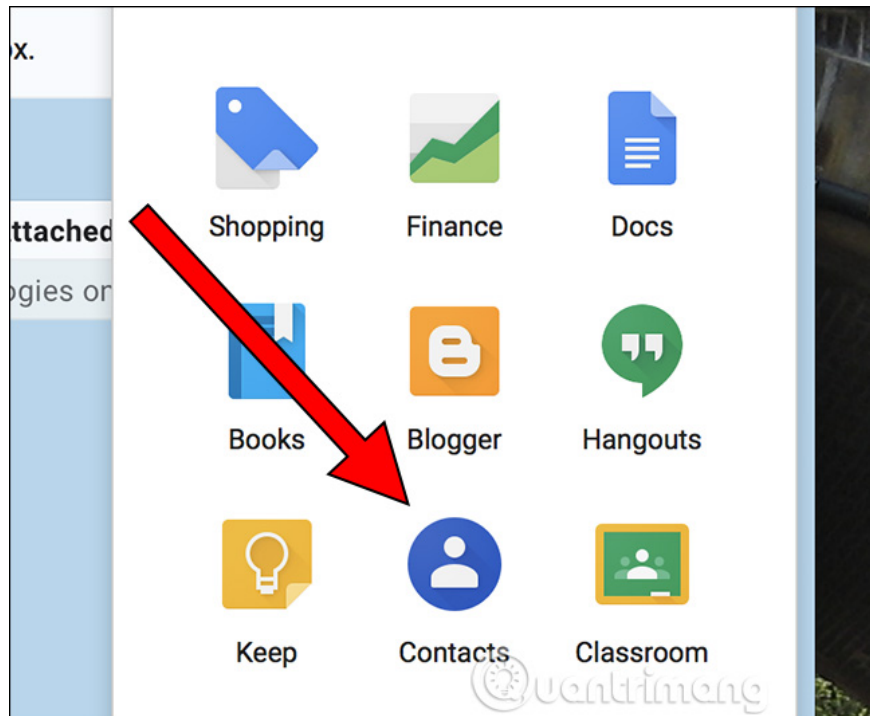

With this new version, you will not have a quick link to access your contacts. However, you can add yourself using the app drawer that is rarely used on the top right.

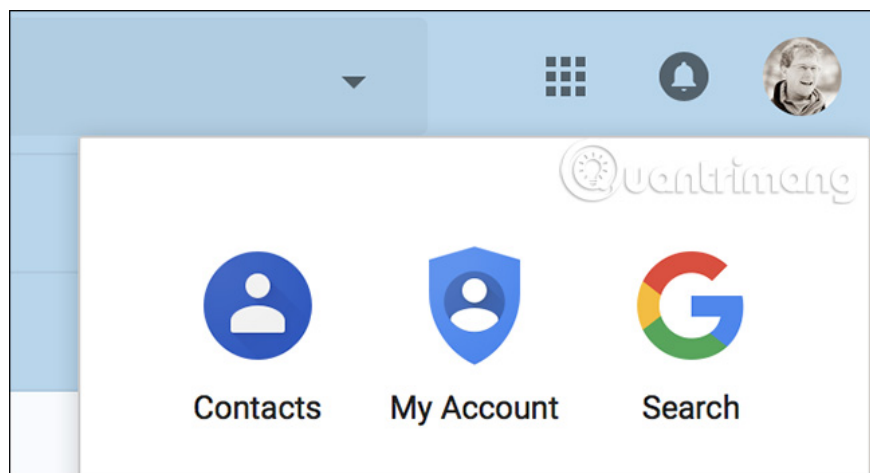

Click on it and you will see a series of icons for different Google applications. If you don't see **Contacts** , click **More** .

You will find **Contacts** here.

Then, you can click and drag to rearrange the icons in the application pane, drag the Contacts icon to the appropriate location.

Now, you can quickly access Contacts by opening the app drawer, then clicking the " **Contacts** " button.

Alternative: Just use bookmarks

The method of using the app drawer mentioned above will open Contacts in a new tab that some people are not happy with. There is no way to fix this problem in Gmail, but if you want to open Contacts in the same screen, you can create bookmarks for Contacts in the browser.

Google Contacts is on contacts.google.com, so just open that page and bookmark it again, from now on you can open your contacts at any time.

I wish you all success!
