

# How to find lost Android devices using Android Device Manager

Android Device Manager is an Android device management application that helps you locate your smartphone if lost.

If you accidentally let your smartphone get lost somewhere, how will you do it? With the iPhone or iPad, we can immediately use the Find My iPhone feature available on the device, already introduced by the Network Administrator in the iPhone article, your iPad is missing. This is how to find them again.

If you are an Android device, which application will you use? Android Device Manager is an application to manage Android devices, enabling users to locate their smartphone locations lost. When users install the Android Device Manager application on the device, you will have the right to remotely lock the device to prevent unauthorized use of the device. Or you can delete all data on smartphone remotely with just a few simple clicks. In the following article, we will guide you to find your lost phone using Android Device Manager in 2 different ways.

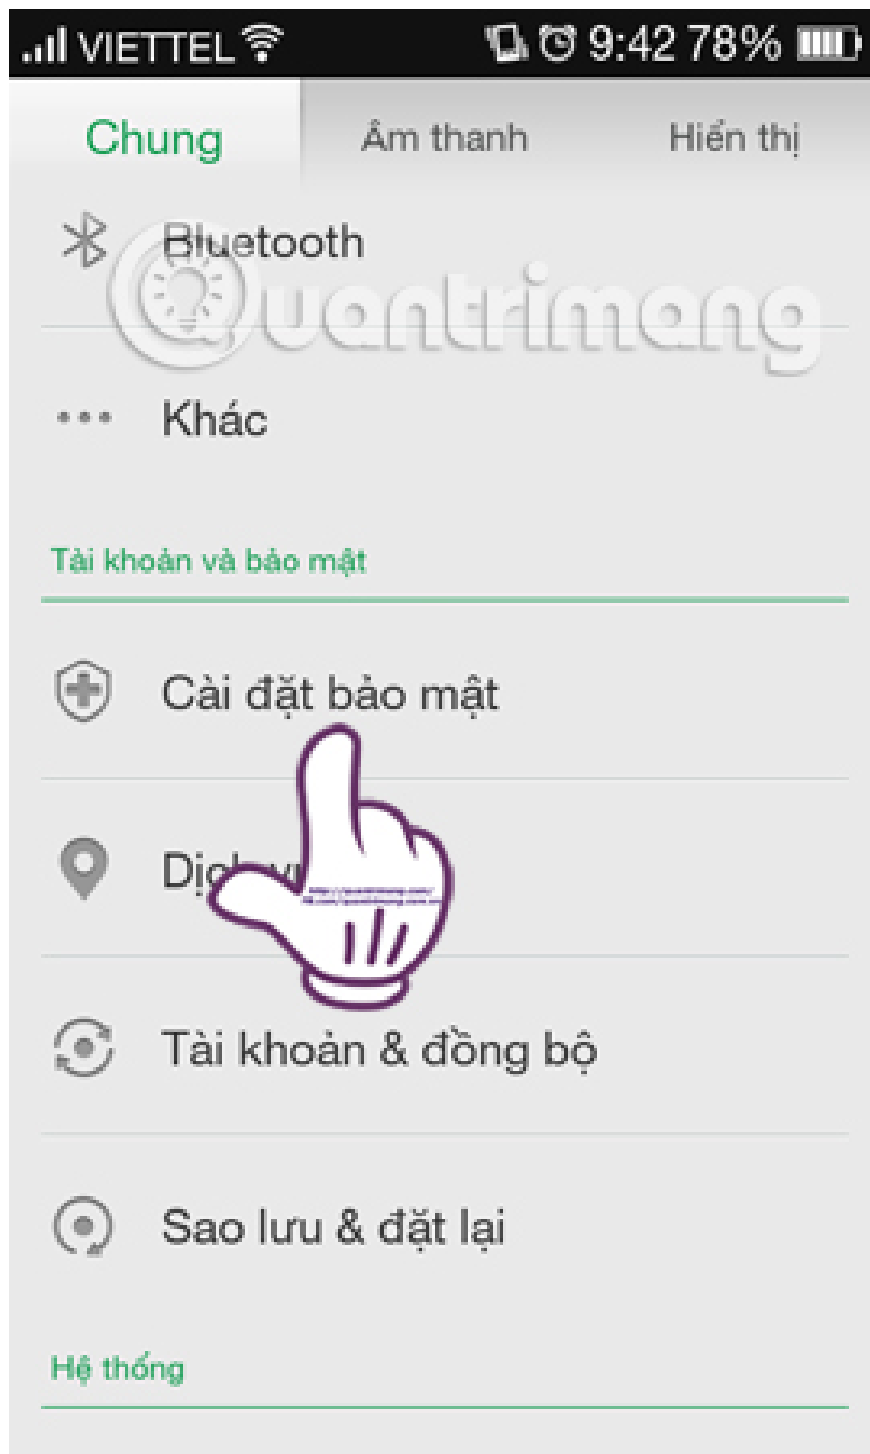

However, beware of users to be able to use Android Device Manager, you need to enable phone locating on the device. The phone always turns on GPS, mobile data connection or WiFi.

## 1. How to turn on the phone locator feature:

### Step 1:

At the interface on the device, we access the **Settings** icon **and** then navigate to the **Security settings section** . Depending on some device devices this may be Safe and Secure or Lock Screen and Security.

## Step 2:

In the Security settings interface, go to the **Device Administrator** section. Click on **Android Device Manager** in the next interface. Soon you will be able to see the actions that users can use including Delete data, Change the password to unlock the screen and Lock the screen.

Click **Activate** . So, we have turned on location positioning for Android device.

## 2. Locate misplaced Android device location:

### Method 1: Use the Android Device Manager web

#### Step 1.

First, visit the Android Device Manager website according to the link below

1. <https://www.google.com/android/devicemanager>

## Step 2:

Next, you will be **logged into the Google account** you are using on the lost phone device.

## Step 3:

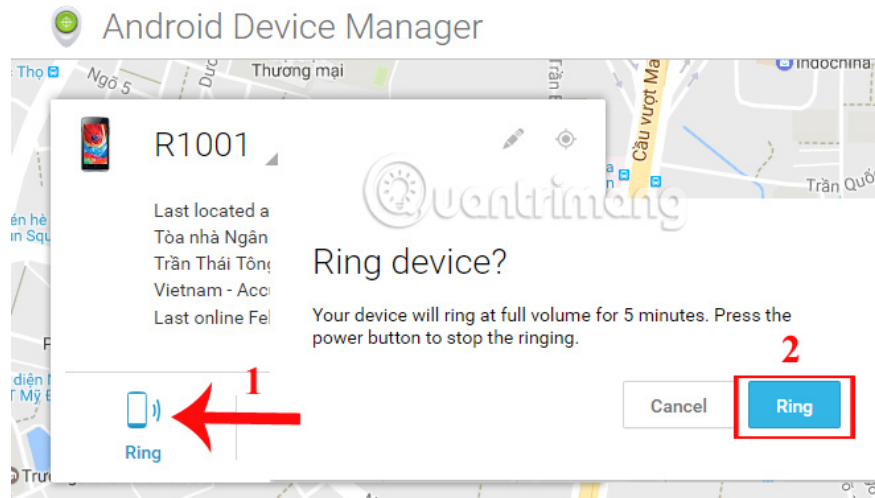

After we log in successfully, we will see the missing device name, along with the device location information on the map. **Note** to users this way only applies when your device is turned on and connected to WiFi or mobile data.

#### Step 4:

Here you will see 3 different options.

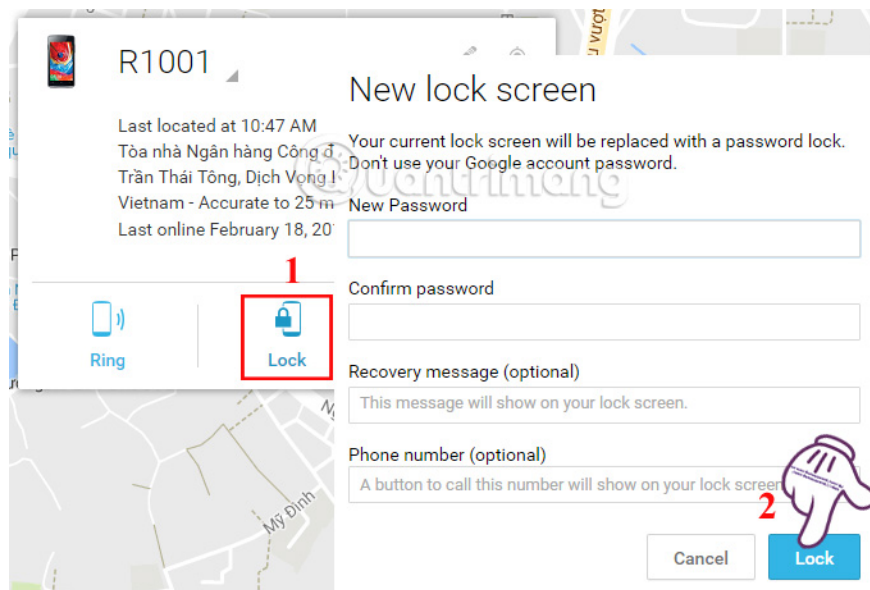

**Ring** : the ringing function will cause the audio player to help you find your phone within close range. You will receive a notification that the bell will fall within 5 minutes. When you find the phone, press the power button to turn off the ring.

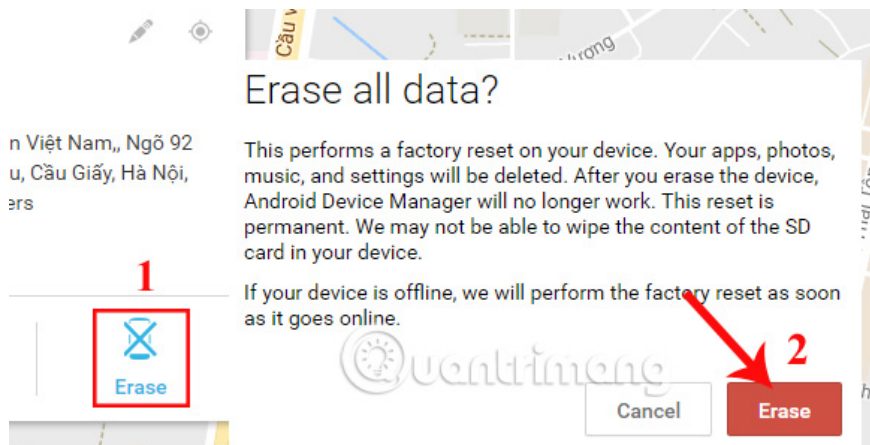

**Lock** : when using this feature, the program will ask the user to set a new password and then lock the device. We will fill in the fields:

1. New Password: enter a new password for the device.
2. Confirm Password: confirm password.
3. Recovery message (optional): The recovery message will appear on your lock screen. You can use this option or not.
4. Phone number (optional): enter the phone number to appear this number call button on the lock screen. Option to use this item.

In case your lost phone turns off or disconnects from the network, the locking order from the web browser is still valid until the lost device is turned on, or has a network connection.

**Erase** : delete the data available on the device. With the data on the SD memory card will not be deleted. The command to delete data will remain the same even if the phone is turned back on or reconnected to WiFi.

## Method 2: Use the Android Device Manager application

### Step 1:

First of all, download the Android Device Manager app to your device using the link below:

1. Download the Android Device Manager app

### Step 2:

After downloading the application to the device we proceed to install. The first interface of the application is to allow Google to use location data to locate the device. We click on **Accept** .

Next the application will ask you to **log in to your Google** account.
