

How to find the backup location of Windows 10 iTunes?

Storing a backup on a computer is a safe solution to prevent in some bad cases. So iTunes backup is also a safe solution to protect the data. In the article below, Network Administrator will guide you how to find iTunes backup location on Windows 10.

Storing a backup on a computer is a safe solution to prevent in some bad cases. So iTunes backup is also a safe solution to protect the data. In the article below, Network Administrator will guide you how to find iTunes backup location on Windows 10.

How to find the backup location of Windows 10 iTunes?

Access the Cortana search frame, then enter ' % appdata% ' where, on the search results list, click '% appdata%'.

- Now, on the screen, there is a File Explorer window, where you click the **Apple Computer** folder.

- Open the **MobileSync** folder.

- The folders you want to find will be displayed here, and you can see the **Backup** folder - where all the necessary items will be displayed here.

Also you can directly access the following link to view the Backup folder:

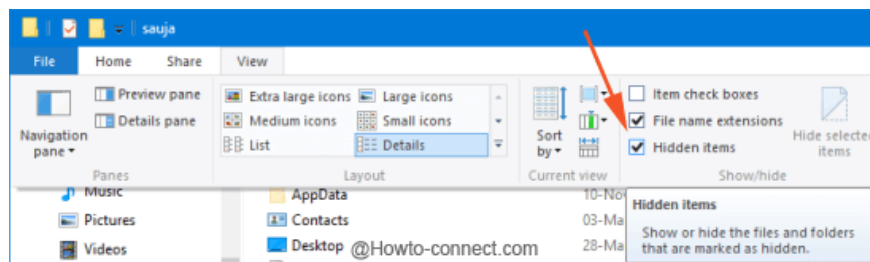

C: Users YOURUSERNAME\AppData\Roaming\Apple Computer\MobileSync\Backup

However, after accessing the USERNAME folder, you cannot view the AppData folder because by default, this folder is hidden on the system. Therefore you have to manipulate more to display the folder and view.

At the USERNAME folder, click the **View tab** in the top corner of the menu.

Find and check the option of **Hidden items** as shown below:

Folders and hidden files will be displayed on the screen.
