

How to fix AirPods with only one ear heard

AirPods only hear one side of the download is not necessarily an error that you can check before going to fix.

The problem with broken headphones is not specific to any one, and common AirPods problems like sound quality issues, poor battery life or AirPods can only be heard on one ear. The AirPods only hear the sound of one ear and the other does not make a sound is not necessarily a serious error that can not be used, but we can also check and correct with some simple actions. The following article will summarize some ways to fix AirPods error only hear 1 ear.

1. What to do when iPhone headset mode error?
2. Fix the error of not connecting to the headset in windows 10
3. Headphone, earphones leaked, noisy, hard to hear and how to fix it?
4. How to connect 2 AirPods to iPhone to share music

Instructions to fix AirPods error can only hear 1 ear

Method 1: Clean the AirPods headset

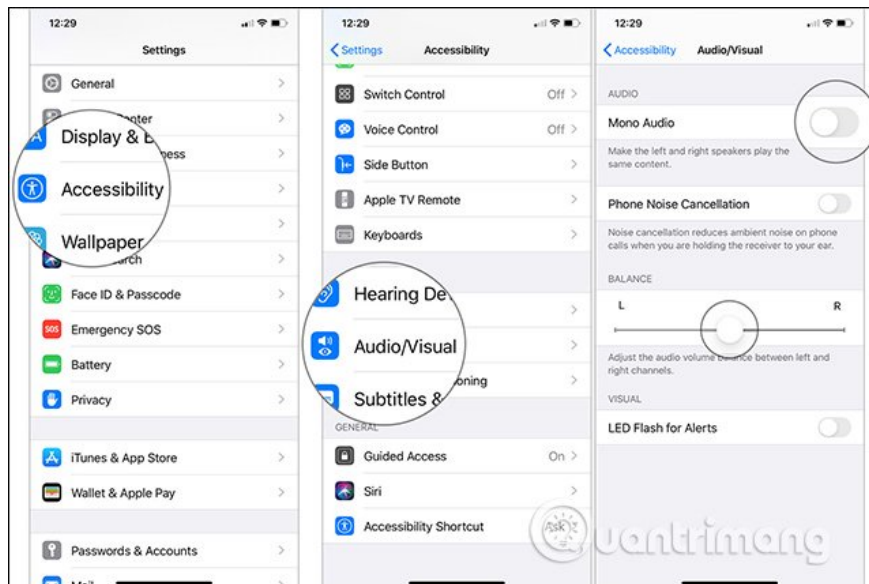

Cleaning the headset is also needed to help us hear sound well and also ensure hygiene for your ears after use. You should clean both the AirPods and the charging box once a month. Readers can refer to the hygiene steps for headphones according to the article below.

1. To protect your hearing, clean your headphones

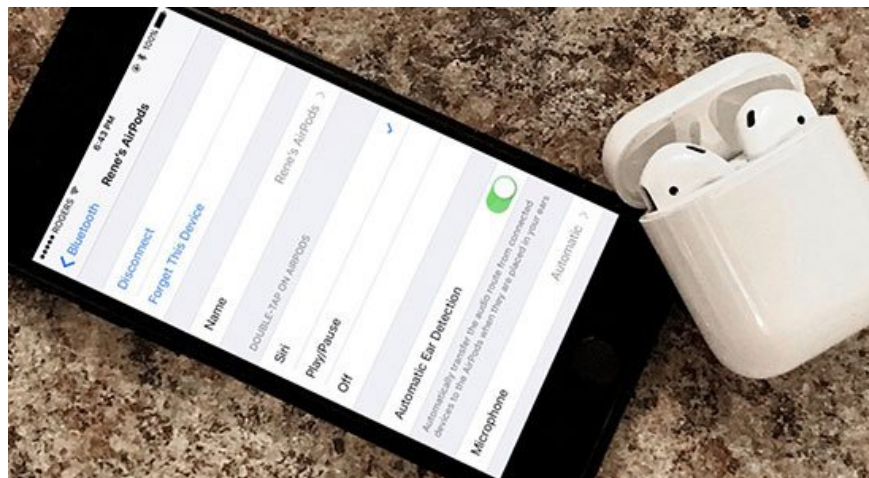

Method 2: Check sound settings on iPhone

The only hearing on one AirPods headset is also possible because we set the sound mode wrong. You go to **Settings> Accessibility> Audio / Visual** . Then **turn off Phone Noise Cancellation** . Next to **the horizontal bar in the Balance section, the circle icon should be centered** . If the circle button is completely off to one side, the sound in that ear will be muted. **Mono Audio mode also needs to be turned off**.

Method 3: Reconnect AirPods with iPhone

When having trouble with sound or another error on AirPods, users can try disconnecting from the iPhone, then we proceed to reconnect the AirPods to the iPhone. How to connect AirPods to iPhone readers follow the article [How to connect iPhone to AirPods without going to the Bluetooth menu](#).

Method 4: Reset settings on iPhone

If you have tried the above methods but not yet, try resetting the iPhone, bringing all the settings on the iPhone to the original default settings. If you do not know how to reset the iPhone step by step, refer to the article [How to restore iPhone factory reset](#).
