

How to fix black screen or black stripe in Nox App Player

When using the above apps or playing games on Nox App Player, you may experience black or black screen problems. So what is the cause and how to fix it?

Black screens and black stripes in games / applications in Nox App Player relate to graphics cards and drivers.

1. 10 best Android emulator software for Windows
2. Play Android game on PC using NoxPlayer (Nox App Player)

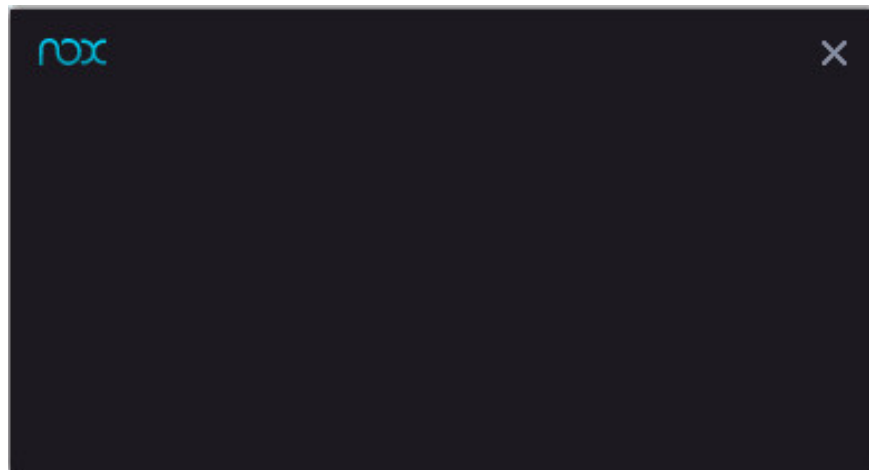

Please note that Nox does not support the integrated graphics card below:

1. Intel G33 / G31 Chipset Family
2. Mobile Intel (R) 4 Series Express Chipset Family

Nox supports these graphics cards, but you can still have problems playing games:

1. Intel HD Graphics 4000+ (Intel Haswell HD Graphics - GT2)
2. Intel HD Graphics 5000+ (Intel Haswell HD Graphics - GT3)

When you see the screen is black or has a black stripe, you can consider the reasons below:

1. Your graphics card driver is not updated to the latest version. In this case, you can try to update the graphics driver or via the official manufacturer's website or use Driver Genius software.

2. Your graphics card driver is the latest but unstable version. Many new drivers may not be as stable as the previous version. In this case, you might consider switching the graphics driver back to the previous version and more stable with Driver Genius software.
3. You are using an old version of Nox App Player. So download and install the latest version of Nox App Player.
4. You are running a heavy game with low performance settings in Nox. If the game you're playing is a terrible game, then you need more CPU and RAM for the Nox to make sure it can run. This can be done in **Nox System Settings> Advanced> Performance Setting>** make the necessary changes and click **Save Changes** .

I wish you all success!
