

How to fix common errors on Garena Free Fire

Garena Free Fire Is a survival shooter game with attractive graphics Garena Free Fire has attracted a lot of participants. However, in the process of playing, it is inevitable that errors are generated.

With the common fixes on Garena Free Fire suggested in the article, you will learn in detail about the common errors, the causes as well as how to fix them to play the game as smoothly as possible. Let's find out now!

During the process of playing the shooting game Free Fire on Garena Free Fire, every player will inevitably get annoyed and annoyed by having many problems while playing. So what are those mistakes? How can I overcome and experience the feeling of smooth game play on mobile as well as computer? Today's article by thuthuat.taimienphi.vn on how to fix common errors on Garena Free Fire will answer all these questions for readers!

1. Unable to play error

This is a common error when you do not thoroughly understand the requirements and specifications for your mobile device before downloading a game, leading to inability to access the game. And to fix this, please note the minimum system requirements when playing Free Fire as follows:

Requirements for Android phones:

- OS 4.0.3
- Free space: 270 MB
- 1GB RAM
- CPU: Quad core

Requirements for iOS phones:

- iOS 8.0 and above
- Free space: 460 MB
- 1GB RAM
- CPU: A6 duo core

Accordingly, you should see if your device meets the above requirements. Please try to adapt to those requirements. In case you are unable to do so because your phone configuration is weak, you might consider redirecting to play Free Fire on PC

2. Error jerky, lag, freeze while playing

This is probably the most frequent mistake and can drive any player crazy if they do. Here are some things to try to fix this:

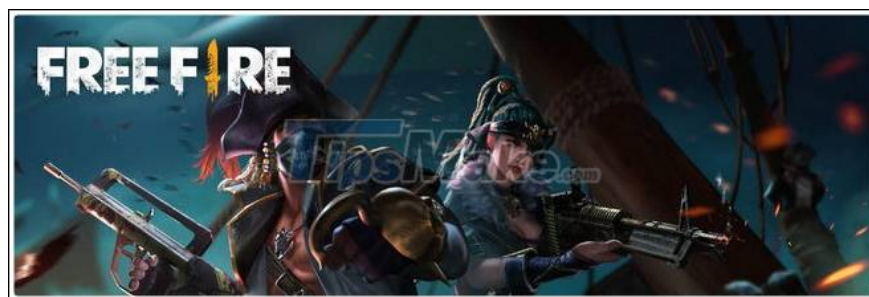

- Check Wifi speed: If you use wifi to play games, make sure the wifi network has good speed, so that your connection is stable while playing.
- Turn off apps: Before starting a game, try to exit the apps you are using. If possible, open only the Garena Free Fire app.
- Battery: Limit charging while playing. This not only makes the game lag, but is also bad for your health.
- Graphics: Go to the main menu of the game to adjust the image quality, graphics to a low level
- Cache: Empty the cache
- Close game: You can completely turn the game off and reopen
- Restart the device : If all of the above fails to fix the error, power off your phone and restart the game

3. Error is out of game

If you are out of the game, it is most likely because your device lacks memory. Basically, this error is quite similar to the lag error above. Therefore, please apply the above fixes but you should focus more on solutions such as:

- Battery: Limit charging while playing. This not only makes the game lag, but is also bad for your health.
- Cache: Empty the cache
- Close the game: You can completely turn off the game and reopen it
- Restart your device: If all of the above methods do not help you to fix the error, please power off your phone and restart the game
- Graphics: Go to the main menu of the game to lower the quality of images and graphics

4. Connection loss error

Usually this error is caused by the speed of your network connection. The fix for each connection type is as follows:

- Wifi network: For example, if you use public wifi or wifi pagoda, the connection is usually quite poor, the signal quality is not good. In this case it will be quite difficult to overcome. However, if you use wifi at home or in your room to play, you can fix it by trying to restart the modem.
- Mobile data: If you play Free Fire on your mobile device, make sure your mobile data is at high speed, 3G, 4G. . If the connection is poor, immediately check your Data traffic, or contact your SIM carrier to purchase more high-speed traffic.

Besides the 2 workarounds above, you can also use another method that is to restart your device and continue into the game. In case, try all of the above and still do not fix the error, contact Garena Free Fire developer.
