2. How to fix application crashes on iPhone, iPad

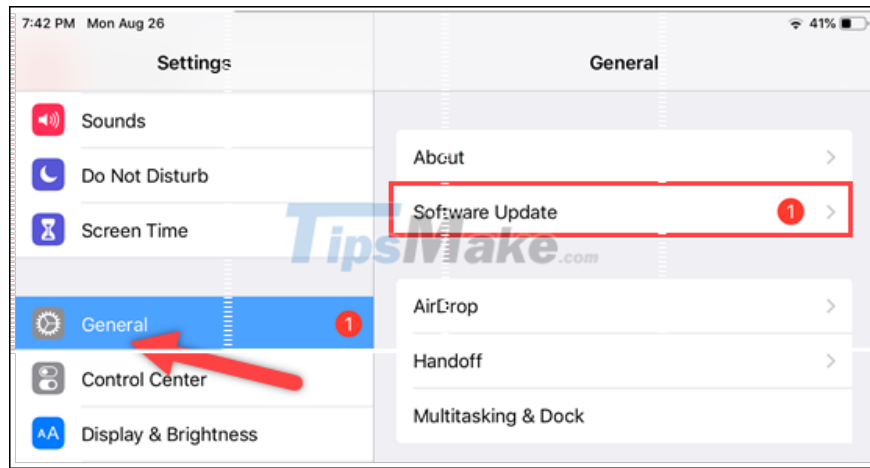

2.1. Reboot the device

The principle when fixing problems on the phone or on the computer can be applied in general one way is to restart the device. To fix crashing apps on iPhone, iPad, restarting the device option is the best way to help you crash crashes apps on iPhone, iPad. While not completely 100%, this is the easiest way to go.

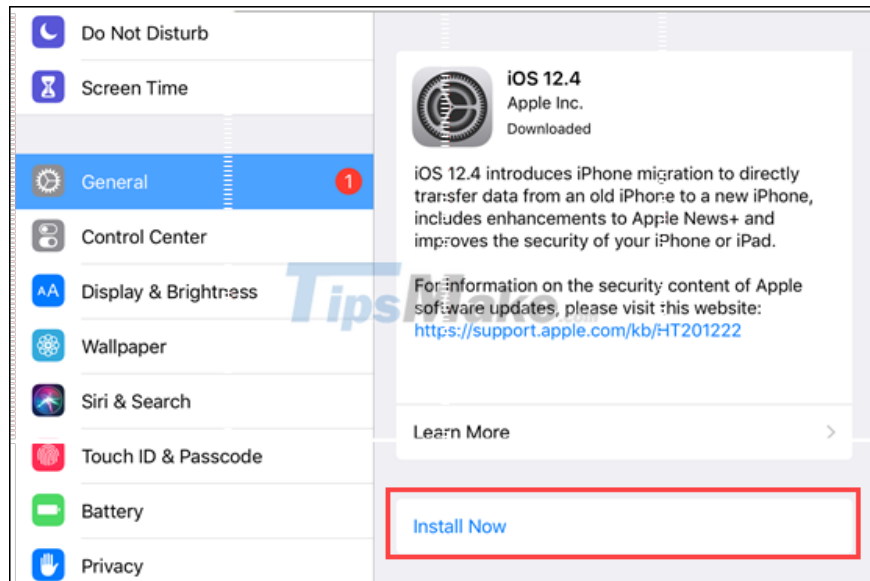

2.2. Update to the latest iOS version

Checking and updating the latest iOS version is also a good way to help you eliminate crashing errors on your iPhone, iPad, and how to update it is extremely simple if you follow the instructions below.

Step 1: First you just need to go to General (settings)> select Software Update (Update).

Step 2: Here in the Update section we click to check and if the system will ask you to Install, it's best to click Install Now to proceed to download and install. Note The device battery needs to be greater than 50% to update.

2.3. Uninstall the application just downloaded

Uninstalling applications is sometimes a good method to help you temporarily crash apps on iPhone, iPad. To delete you just need to hold on that app then press the X to delete. You can then use the restart method or upgrade the iOS version before downloading the app again.

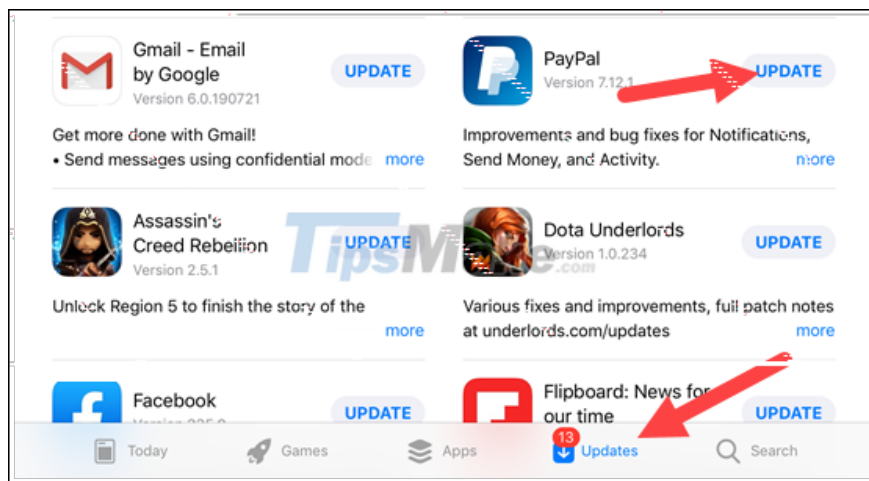

2.4. Check for application updates

There are a number of applications that fail at the moment, if the publisher knows they will update immediately, but not always the user knows this. Therefore you should check more often for in-app store updates.

Step 1: First, to update the app you must go to the App Store on your device's interface.

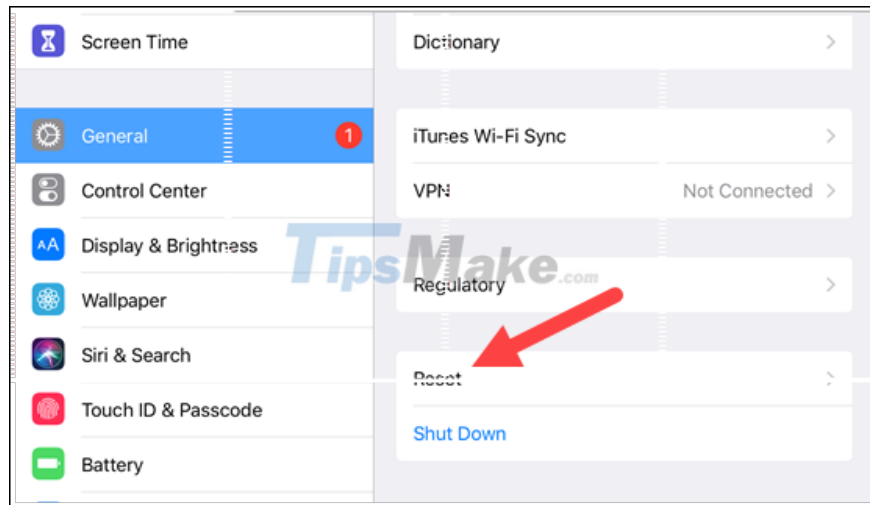

Step 2: Here you just need to go to Updates and update the application you just downloaded or most recently or if you have time, update all of them.

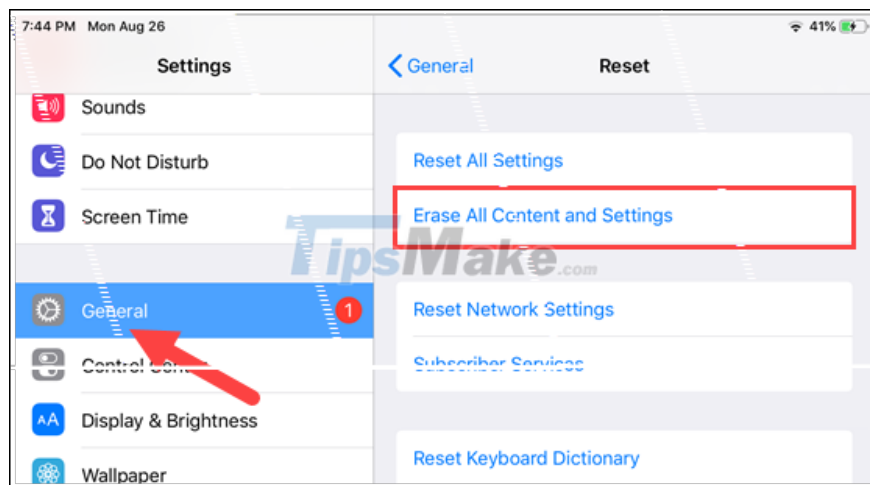

2.5. Full reinstall of equipment

Resetting the entire device from apps to settings is one of the best ways to crash apps on iPhone and iPad. Although it is not a priority, you should try this method if the above method cannot be done anymore.

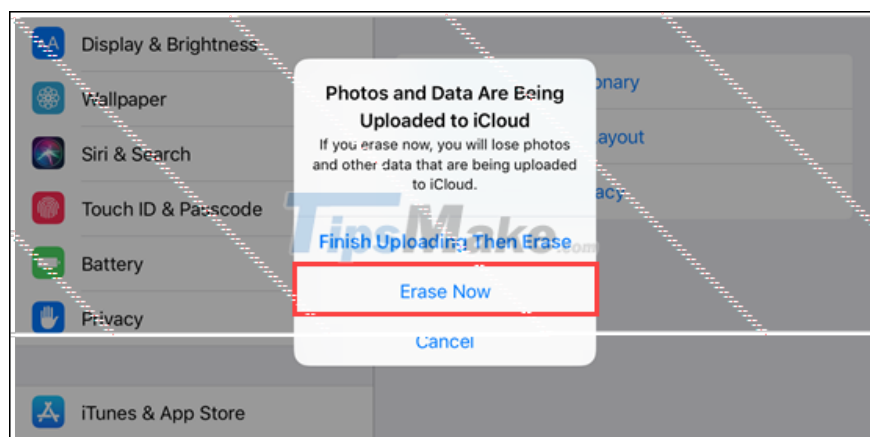

Step 1: First you just need to go to General (Settings)> then select Reset to reinstall.

Step 2: In here we just need to press the second option, Erase All Content and Settings, to delete all applications along with some other settings.

Confirm it again by selecting Erase now and then reinstalling the app to see if there are still crashes on your iPhone or iPad.

2.6. Insufficient configuration or unsupported version

In case your device accesses any application or game that is immediately thrown or has been used for a while before it crashes, this is a sign that your iPhone device is not falling in love. Configure it to be able to load and experience this application stably.

Or in the event that the version does not support, your condolences are that you need to upgrade to a new device because there is no way to help you fix crashes of apps on iPhone, iPad anymore.

Above are ways to help you crash apps on iPhone, iPad, with tips to fix on Taimienphi.vn hope you will quickly fix the error and be able to use the application again on your device.

There are many errors on the iPhone that happen to users while using the phone, the iPhone itself is a good phone and the errors are just unintended.
