Instructions to fix dxgi.dll error installing PUBG

The occurrence of dxgi.dll error installing PUBG is because some players install Reshade software to adjust image quality and image smoothness when playing games. However, this software is incorrectly configured so the computer cannot find the dxgi.dll file to install PUBG.

Method 1: Delete the dxgi.dll file in the PUBG folder

When installing PUBG, the file dxgi.dll will be located in **Windows (C :) / Program Files (x86) / Steam / steamapps / common / PUBG / TsIGame / Binaries / Win64 .**

Please click on dxgi.dll file to delete. If you have installed Reshade, **delete the reshade-shaders file .**

Method 2: Reinstall DirectX

1. How to download Direct X and install DirectX on your computer

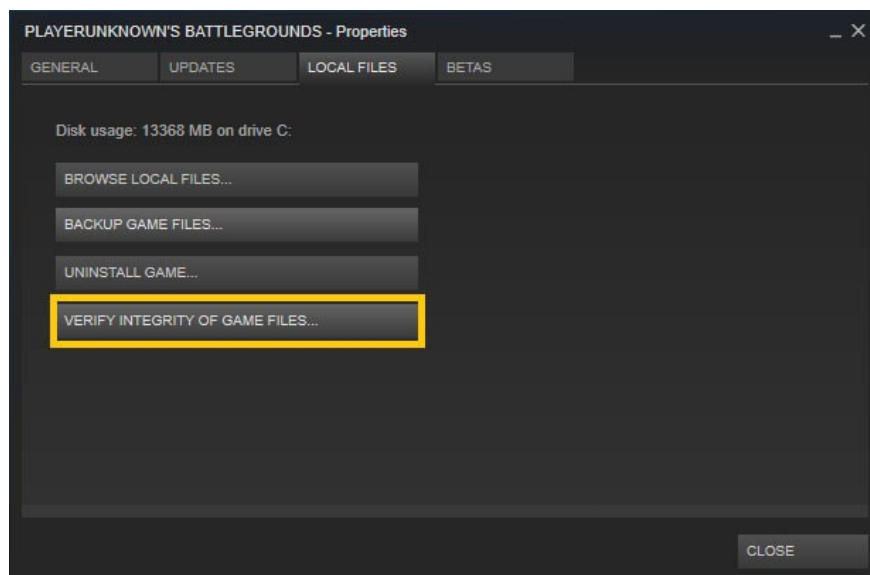

DirectX is a tool that supports graphics, audio, and application installation on computers. If so, you can try to delete the version of DirectX installed on your computer if available, then install the new version of DirectX. Finally restart the computer to fix the error.

Method 3: Fix the installation file error

If you buy PUBG game from Steam, you can check the file if the file has errors or not.

Access the Steam application and click on **the** Game library (Game library). Then find **PlayerUnknown's Battlegrounds** game and right-click and select **Properties** .

A new window will appear and click on **Local Files** then select **Verify Integrity of Game Files** .
