

How to fix error 0x80070422 in Windows 10

The error 0x80070422 originates from many different reasons, but most of them are related to network settings on Windows 10. Software tips will guide you how to fix error 0x80070422 on Windows 10.

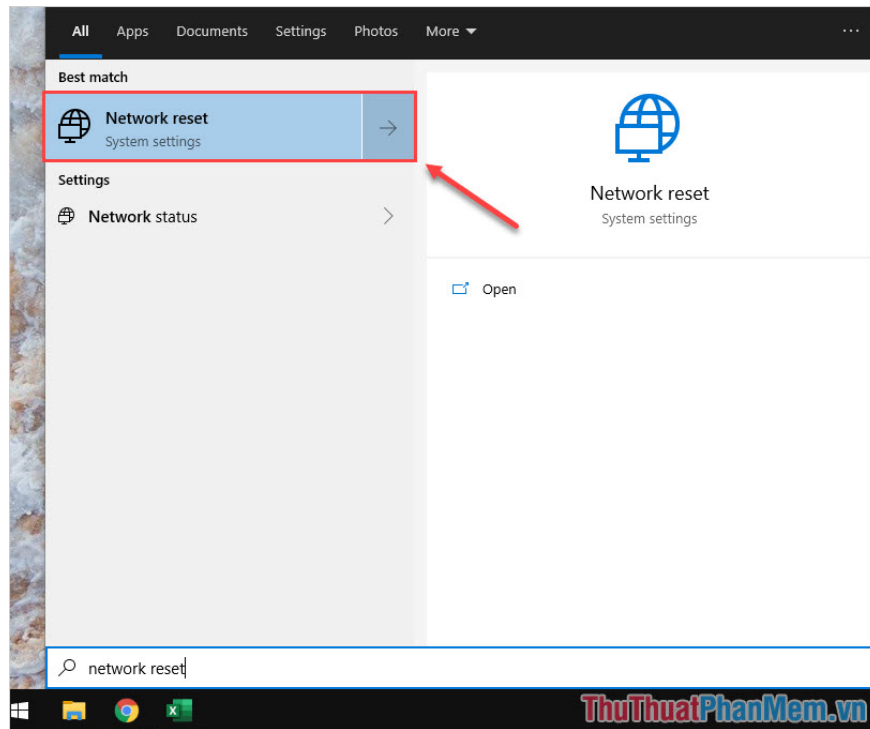

While using Windows 10, we can not avoid the error generated from the system, one of the common errors on Windows 10 is 0x80070422. The error 0x80070422 originates from many different causes, but most of them are related to network settings on Windows 10. In this article, the Software Tips will guide you how to fix error 0x80070422 on Windows 10.

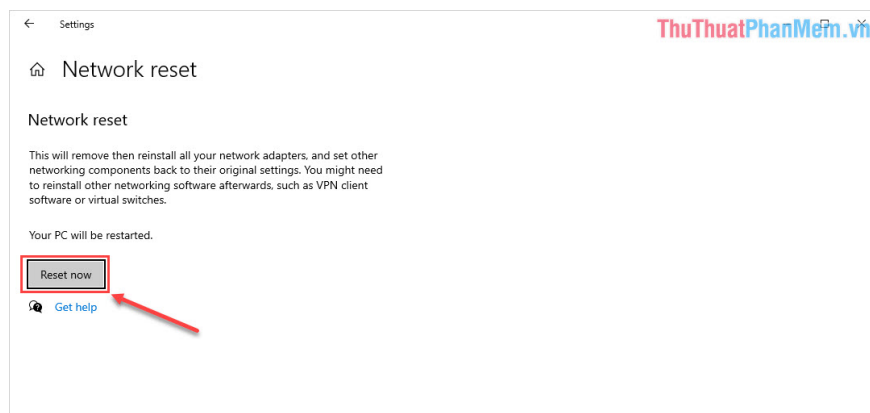

1. Restart network setup

One of the top solutions to dealing with 0x80070422 error is to reset the network connection because this is the component that easily generates the error.

Step 1: You proceed to open **MenuStart** and enter **Network** .

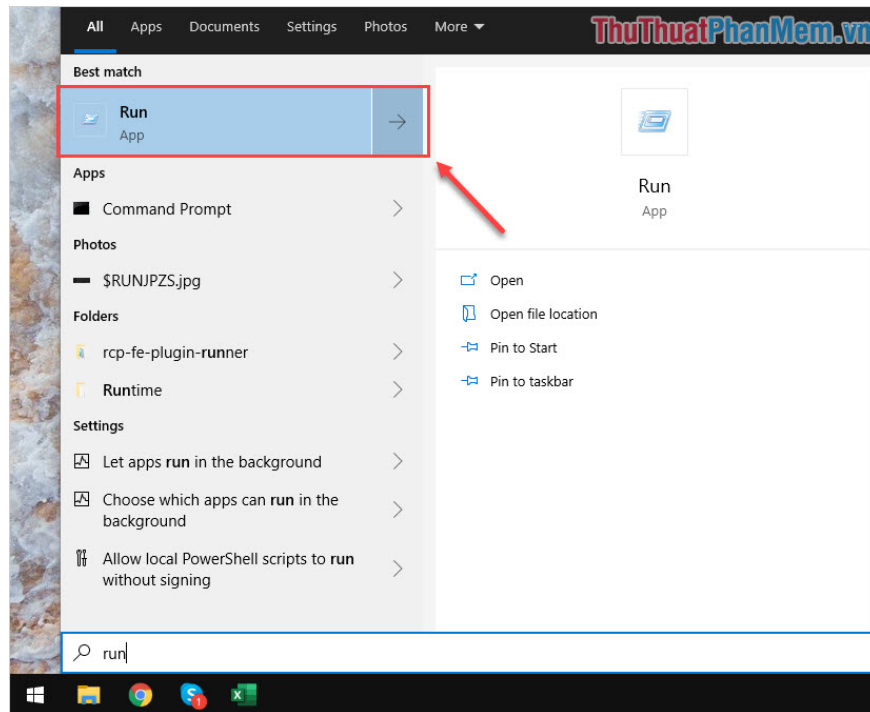

Step 2: Then, you select **Reset Now** to reset network settings on Windows 10.

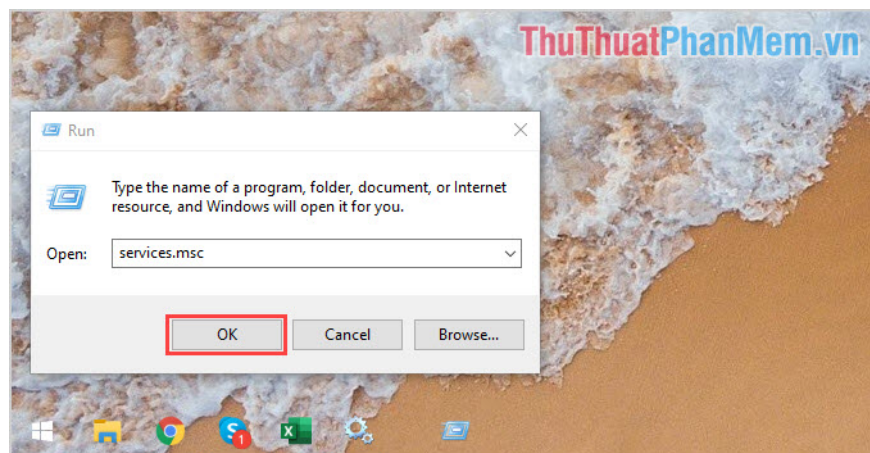

2. Set up Windows Update Service

Windows services also use network connectivity and they are also a common component of the error 0x80070422.

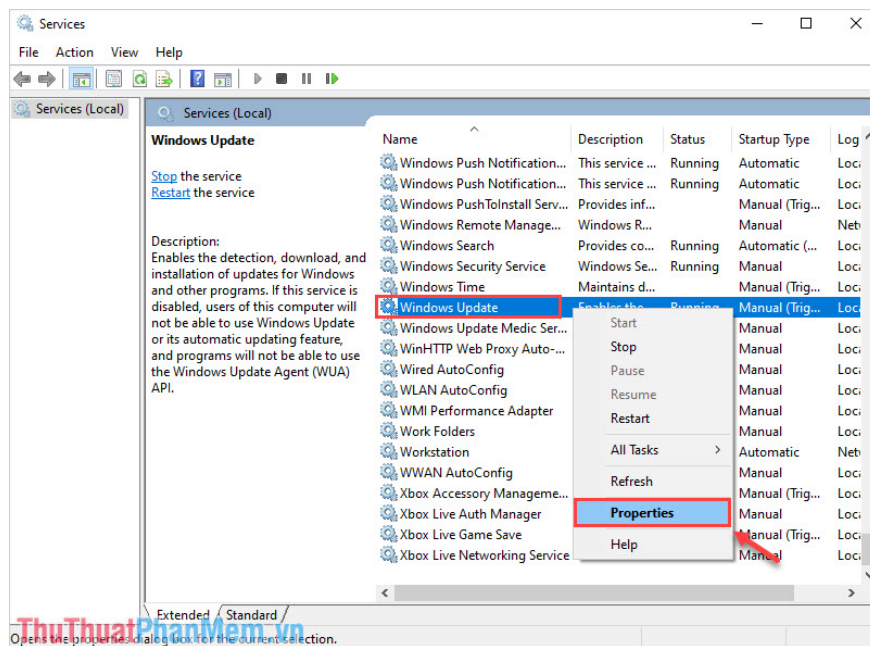

Step 1: You proceed to open **MenuStart** and enter **Run** .

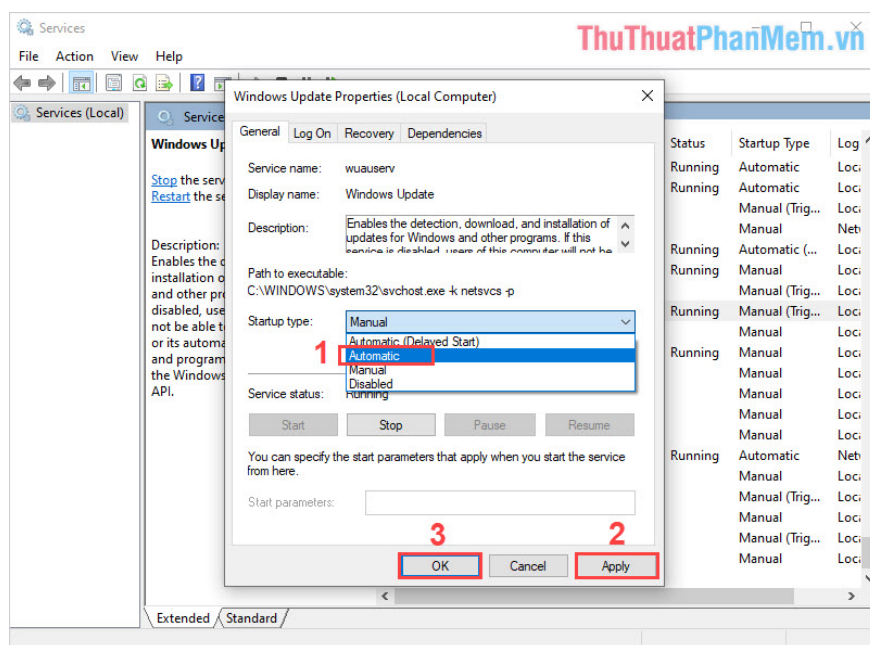

Step 2: Then, you enter **services.msc** and press **Enter** to open.

Step 3: Next, you scroll down and find **Windows Update** and Right-click and select **Properties** .

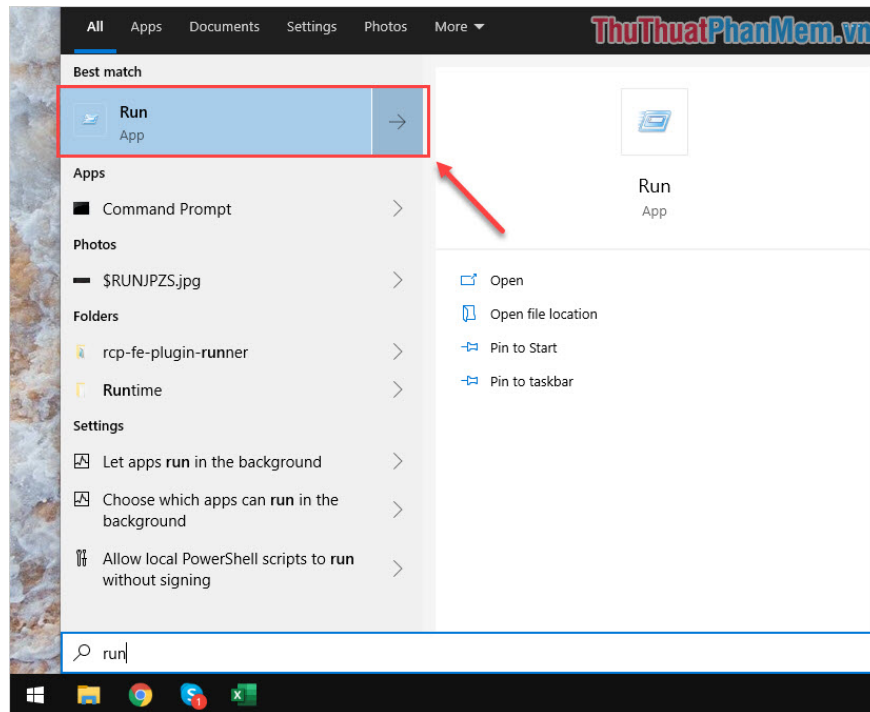

Step 4: Finally, turn the **Startup type** to **Automatic** and click **Apply** -> **OK** to finish.

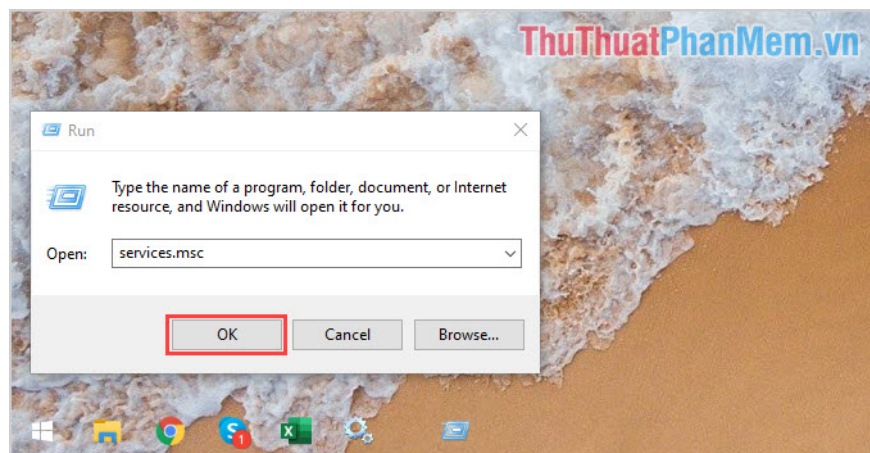

3. Activate Network List Service again

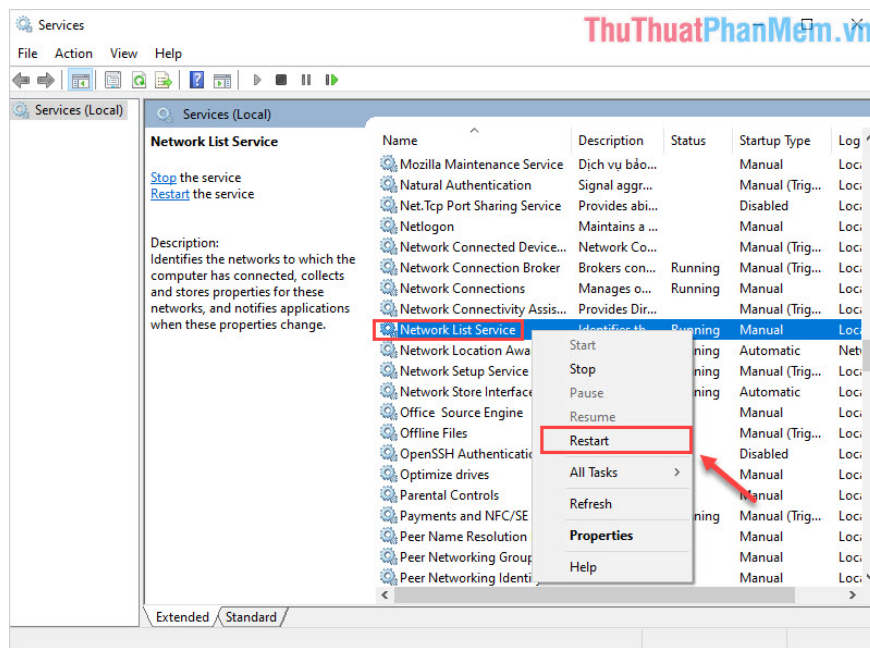

Step 1: You proceed to open **MenuStart** and enter **Run** .

Step 2: Then, you enter **services.msc** and press **Enter** to open.

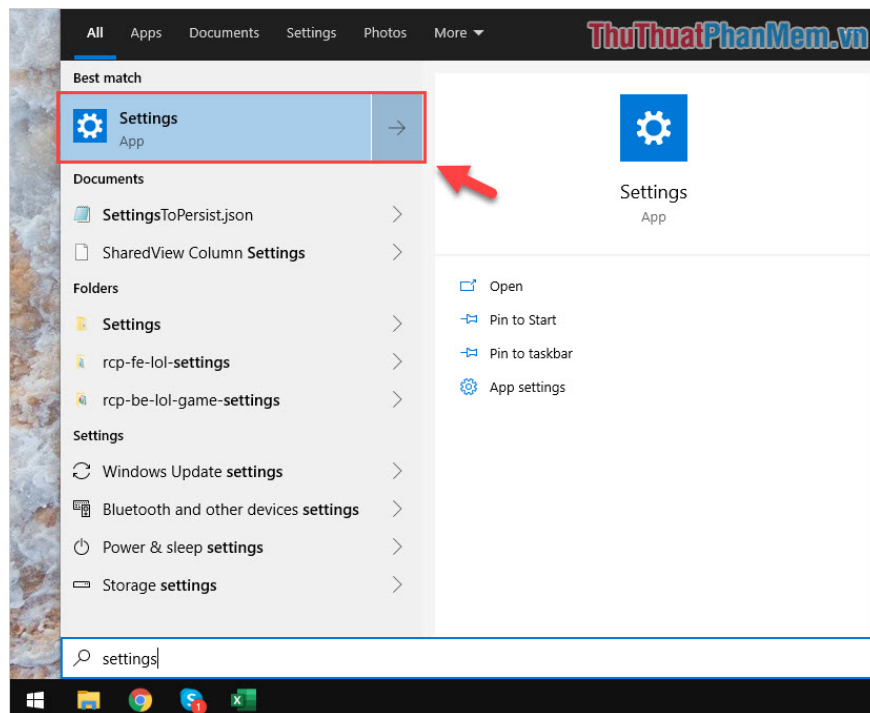

Step 3: Next, you scroll down to find **Network List Service** and Right-click to select **Restart** .

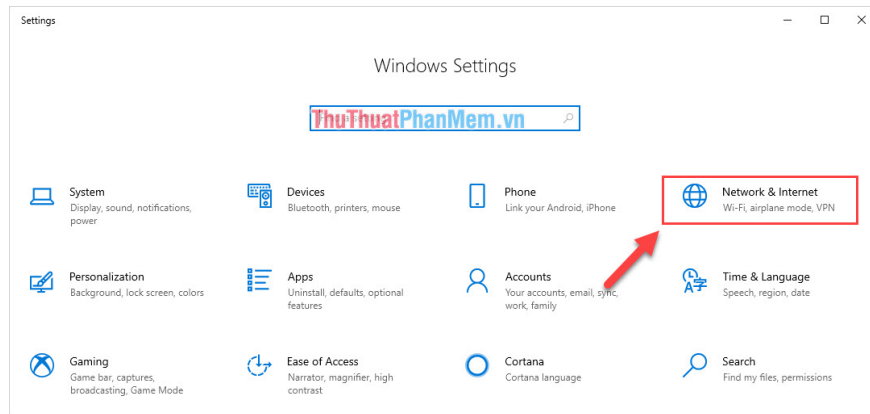

4. Turn off IPv6 of network settings

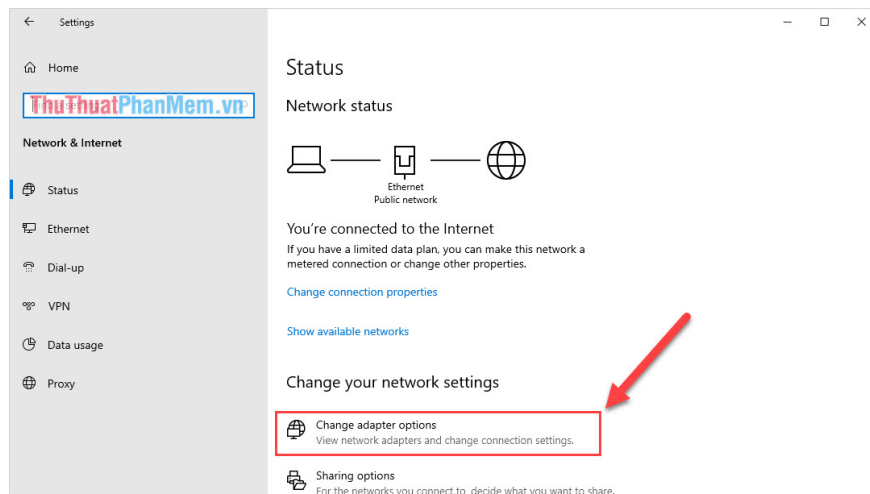

Step 1: You proceed to open MenuStart and enter Settings to open.

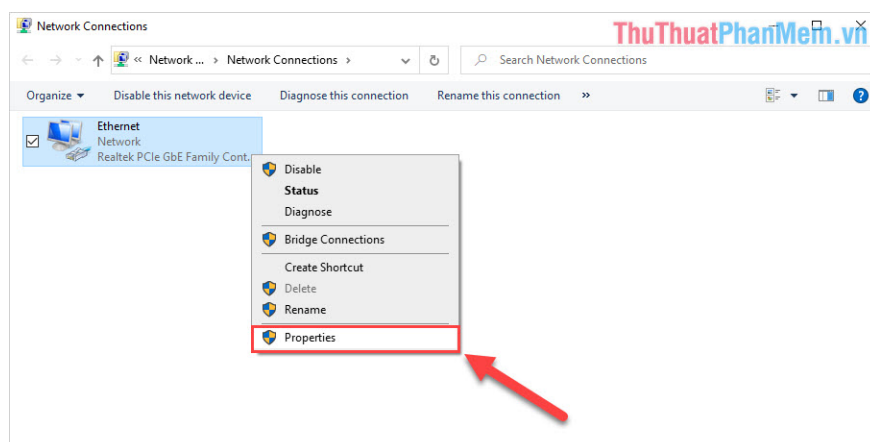

Step 2: Then, you select the **Network & Internet** section to set up the network.

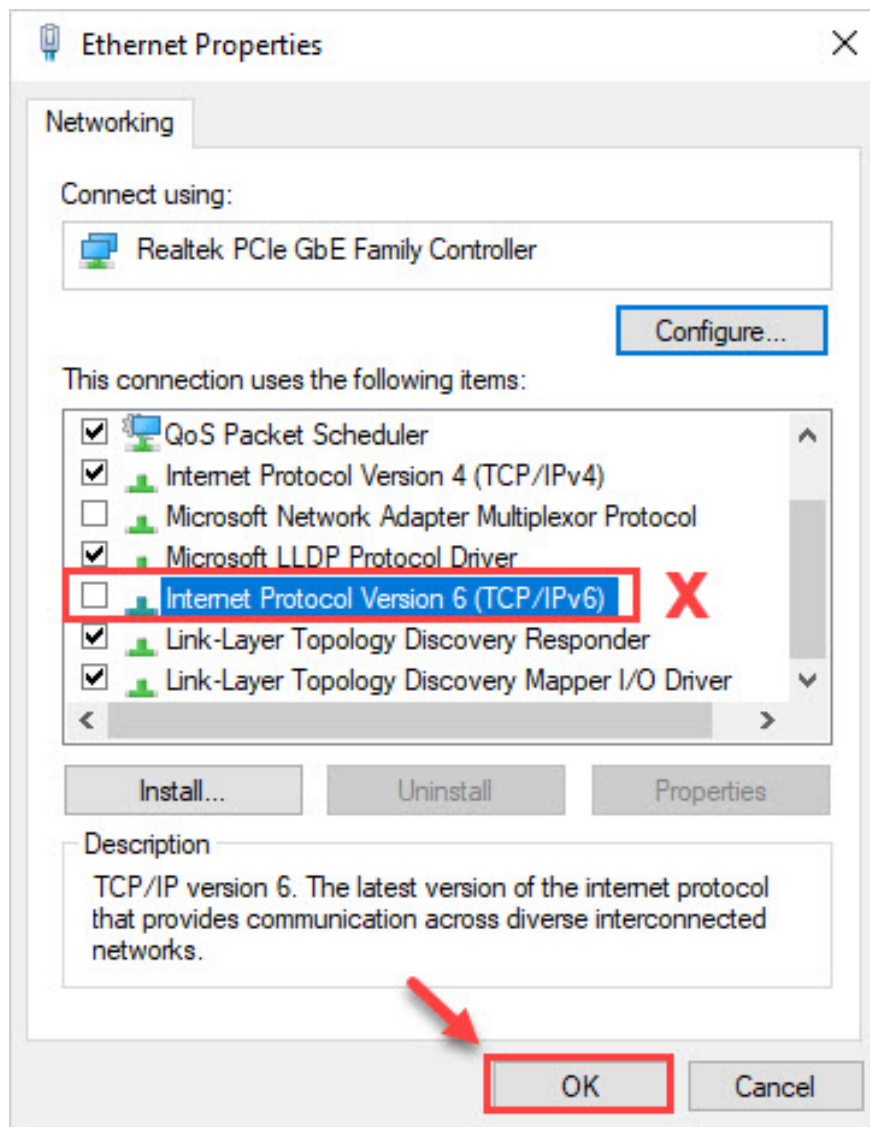

Step 3: Next, select **Change adapter options** to change network options.

Step 4: At this time, the list of network connections on your computer will be displayed. You **right-click** on the network connection you are using to select **Properties**.

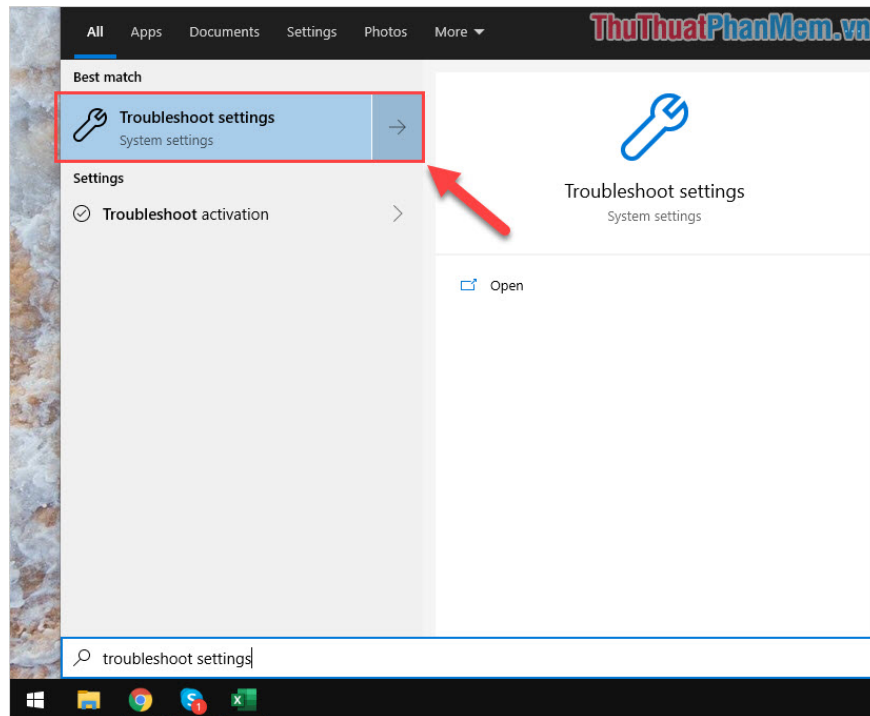

Step 5: Finally, you go to **Internet Protocol Version 6 (TCP / IPv6)** to turn them off.

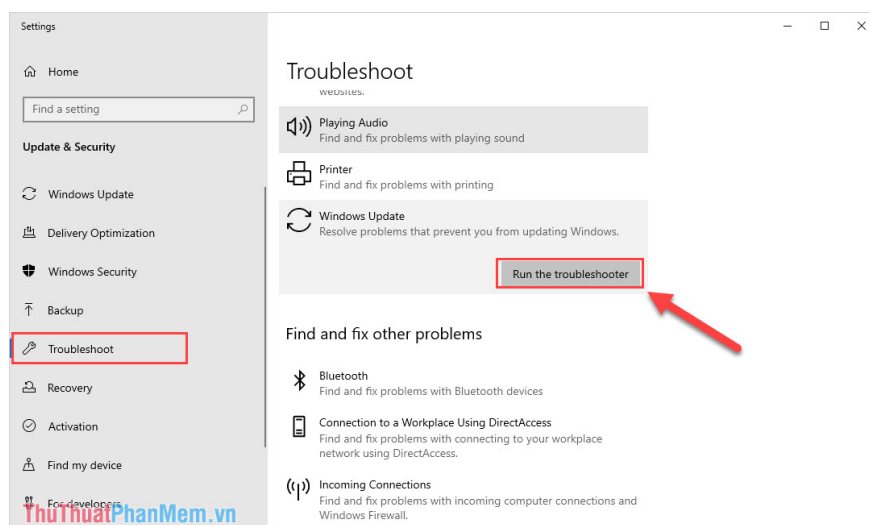

5. Use the debugger on Windows 10

If the above methods do not help you overcome the error 0x80070422, then you must resort to the error repairer on Windows 10.

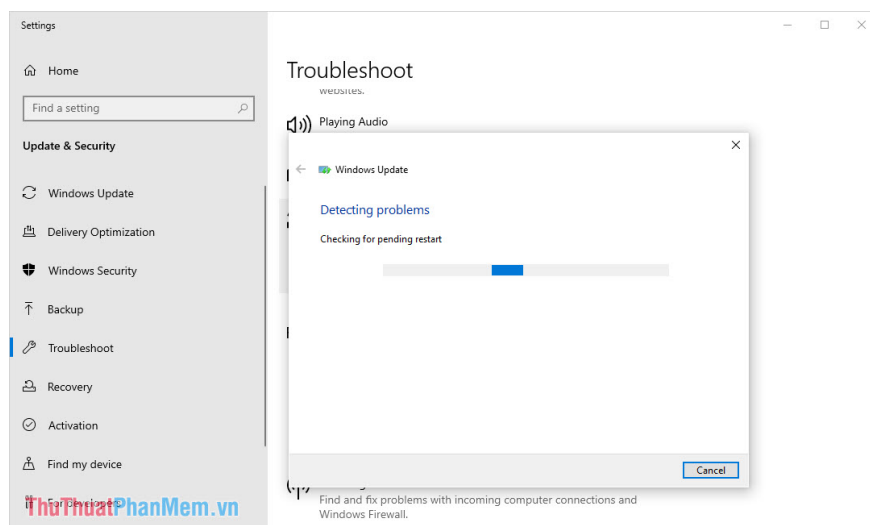

Step 1: You proceed to open **MenuStart** and enter **Troubleshoot settings** to open error correction settings.

Step 2: Then, you go to **Windows Update** and select **Run the troubleshooter** .

Step 3: The system will run and automatically fix errors so please wait!
