

# How to fix error 6502 on Canon printer

Canon is famous for its excellent quality printers, but unfortunately it is also quite often faulty. The article shows how to fix error 6502 on Canon printers, click to see now!

You often use the printer because it is a great tool for printing documents for personal needs. However, the printer is still the device that most often encounters errors, causing a lot of trouble for you. Grasping that mentality, the article will guide you on how to fix error 6502 on Canon printers, follow along!

## 1. Cause Canon printer error 6502

You can identify error 6502 on Canon printers by counting the displayed beacons. When you observe, you will see the orange and green lights on the printer flashing alternately according to the rule, when the green light stops, start counting, every time the orange light flashes, the green light flashes, counting once.

The cause of error 6502 on Canon printers is related to the toner cartridge. When the light from the outside environment is too strong, the machine will not be able to check whether the lights on the ink tanks are bright or not, causing confusion, the printer cannot be identified.

## 2. How to fix error 6502 on Canon printer

In general, how to fix error 6502 on Canon printers is not too complicated and fussy. You just need to turn off the machine and unplug it, then plug it back in and start the printer to see if it works properly.

If the above does not work, you can try to reset the printer by following the steps below.

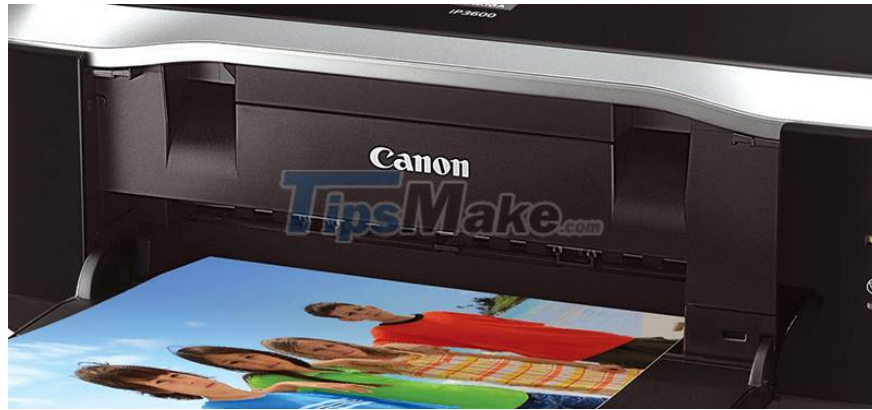

Step 1: Turn off the printer with the power button.

Step 2: Press both the paper button and the power button at the same time.

Step 3: Release the paper button but keep holding the power button.

Step 4: Press the paper button 5 times continuously and release the power button.

Step 5: Run File Servicetool.exe to reset the printer. You can download this software [HERE](#).

In case you cannot handle it by the above methods, please contact Canon center for timely advice and support!
