3. How to fix battery drain errors on iOS 11

iPhone error cannot be triggered causing many annoyances and annoyance to users.

Why can't iPhone activate?

There are many reasons why iPhone cannot be activated, here are the main reasons:

- The activation server is unavailable - The activation server is temporarily unavailable, activating the iPhone to the Apple server is blocked, overloaded.

- The SIM card is unsupported - The SIM card is not supported or invalid (not supported for iPhone Lock devices).

- Activation couldn't be completed - Activation cannot be completed, this means the process of activating the iPhone has an Internet connection error on the iPhone.

Instructions for troubleshooting cannot activate iPhone

From determining what is the cause, we have a number of ways to fix the error that cannot activate the iPhone, please consult and do it all the time, there have been many successful application.

- Check Sim on iPhone

+ Make sure you have attached the Sim to your iPhone device, which is a must to enable iPhone.

+ It is very likely that Sim transplant on your iPhone has a problem, so please check Sim Pairing (for iPhone Lock devices), try removing the Sim card to pair and re-attach it.

+ If you encounter an invalid Sim problem, please fix it by trying to change another Sim pair to check.

- Log in to your previous Apple ID account

+ Logging into the correct Apple ID account that you are using on iPhone before will help you fix errors that cannot activate iPhone.

If you forgot your Apple ID login password, calm down and review the Apple ID password recovery instructions we shared earlier to quickly retrieve your Apple ID account password. and continue to activate iPhone.

+ Check the operation status of Apple ID enabled servers for iPhone here, if the iOS Device Activation line does not show green Try activating again later.

	iCloud Reminders	maps traffic
	iCloud Storage Upgrades	News
i the Cloud	iCloud Web Apps (iCloud.com)	Photo Print Prod
	iMessage	Photos
ds	iMovie Theater	Radio
te	iOS Device Activation	Siri
	iPhone Calls to iPad and Mac	SMS Text Forwar
	iTunes in the Cloud	Spotlight sugges
	iTunes Match	Volume Purchase

As this image shows, all Apple servers are green, indicating that it is still working properly. However, if you see the *iOS Device Activation* section is yellow, it is temporarily impossible to activate the iPhone because the server is overloaded or a short time error.

+ In order for the iPhone to activate quickly, you need to select a stable Wifi network. Check your Internet connection, Wifi connection in case you can't connect to Apple server and iPhone activation fails.

+ If your area does not have Wifi to activate iPhone, download iTunes the latest version to your computer, then connect to iPhone to take steps to activate this iPhone.

- Contact the service provider

It is possible that the Sim card you are using is damaged or defective, so try contacting your service provider to check the status of the Sim you are using as well as renewing the Sim when it is broken. This may take a small fee or is completely free.

- Bring iPhone to warranty

When you have applied all of the above ways but still can not fix the error can not activate this iPhone, please bring to the iPhone warranty center to be supported and overcome.

Now you know how to handle when iPhone is not activated. If you have this problem, you only need to follow one of the ways that TipsMake.com has instructed the above, the error of not activating the iPhone will no longer happen.

Hope you are successful.
