

# How to fix errors do not type Vietnamese on Zalo

One of the most frequent errors in the Zalo PC version is that users cannot type Vietnamese, while other programs can still type.

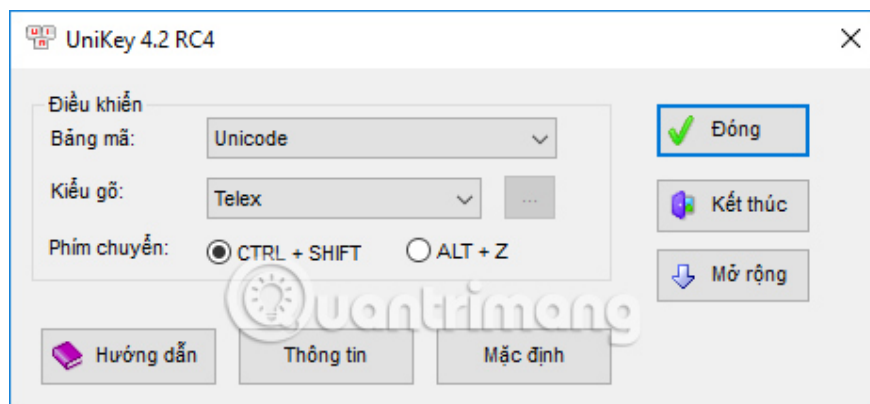

The use of applications and errors during use are inevitable. With Zalo chat service, we often encounter some errors on the phone, or on the Zalo version for the computer. With the computer version, the error of not typing Vietnamese on Zalo makes users uncomfortable while using. You cannot enter accented content, while other text input tools such as Word, Excel, or Facebook can still type in Vietnamese. So how to handle error typing Vietnamese on computer Zalo?

## 1. Check Vietnamese typing tools:

Please try again the Vietnamese typing tool on the computer with the correct encoding. Or you can reinstall Vietnamese typing tools, like Unikey or Vietkey, follow the link below.

1. Download Unikey software
2. Download Vietkey software

After that, re-open the Zalo chat application and can enter Vietnamese chat content as usual.

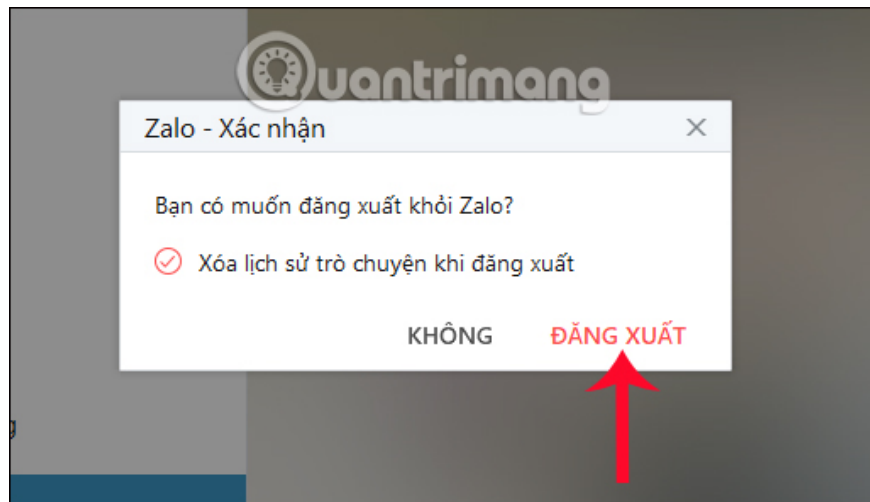

## 2. Update Zalo to the new version:

1. Download Zalo for the latest PC version

When we upgrade Zalo to the latest version, the bugs in the old version will be fixed. Besides, you can also experience more features on Zalo after conducting the update.

After logging in, **log out of Zalo** and restart your computer. Thus, the error of not typing Vietnamese on Zalo will be overcome.

Above is how to fix Vietnamese typing on computer Zalo. In the process of using the user should regularly update to the new version, to fix the bugs in the old version and immediately use some exciting new features.
