Step 3:

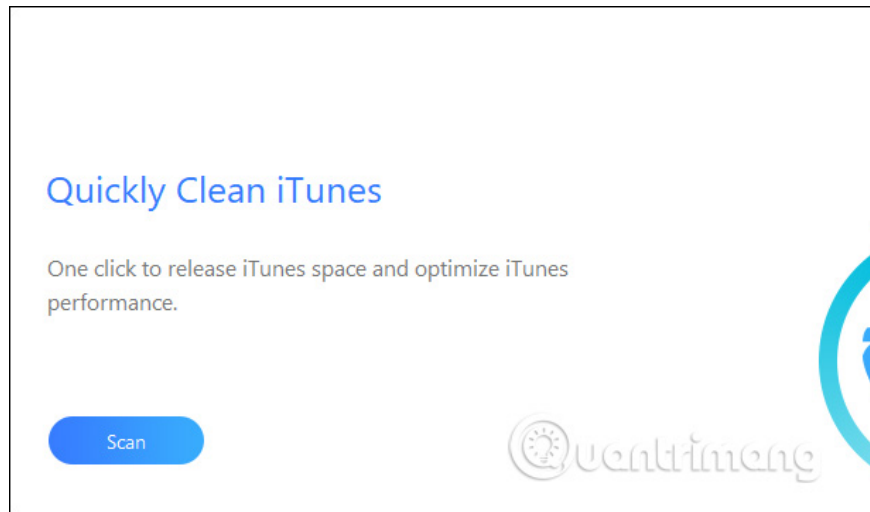

Display interface with 7 iTunes editing options. First of all we choose the iTunes scanning feature to remove the data slowing down the software.

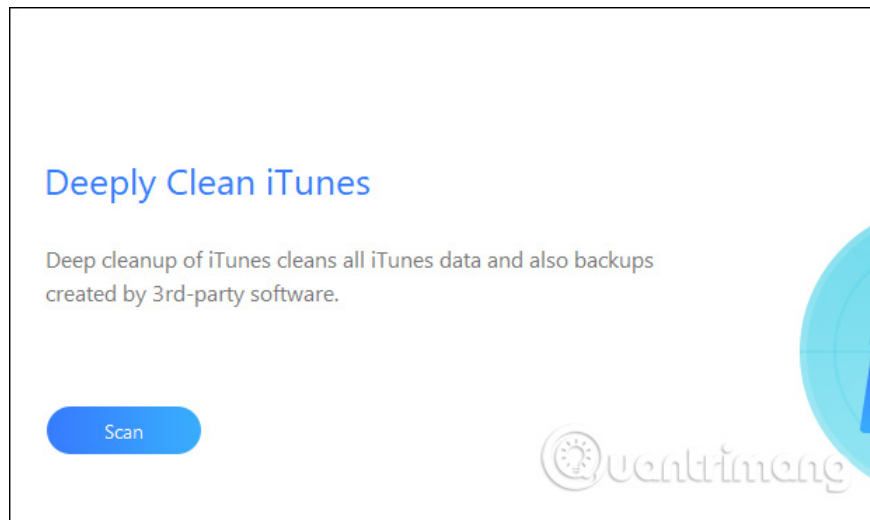

iTunes Version: 12.9.6.3

- Quick Clean**: Delete iTunes media, backups, update files, etc.
- Deep Clean**: Also remove backups made by 3rd-party software
- Full Uninstall**: Uninstall iTunes and related components
- Repair iTunes Connect Issues**
- Fix iTunes Install/Update Issues**
- Repair Backup/Restore Errors**
- Fix Other iTunes Problems**

There are **2 different cleaning** modes, **Quick Clean**, which quickly deletes media data, backup data, updates, logs . that iTunes has created, bringing iTunes to the original refresh mode.

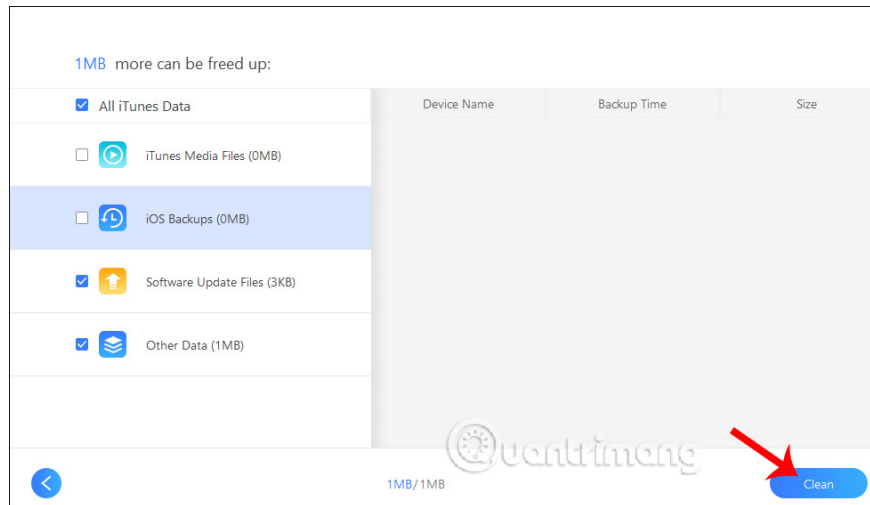

The remaining mode is **Deeply Clean**, delete backups created by iTunes and third-party software such as 3uTools, etc.

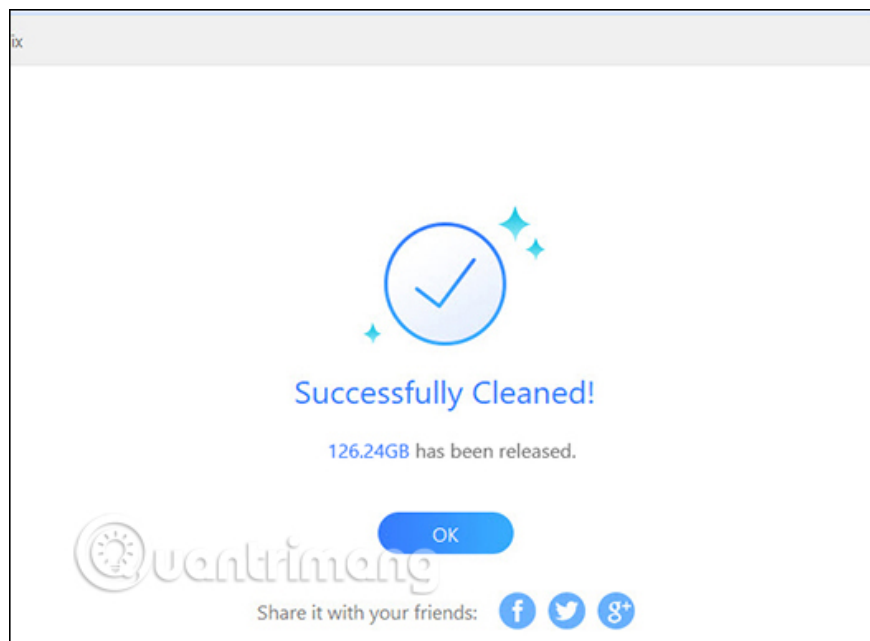

Step 4:

The interface then displays the iTunes data items that the software can check. If you **want to delete any data** , you check the **box in that data** . Then click **the Scan button** below to proceed with the scan.

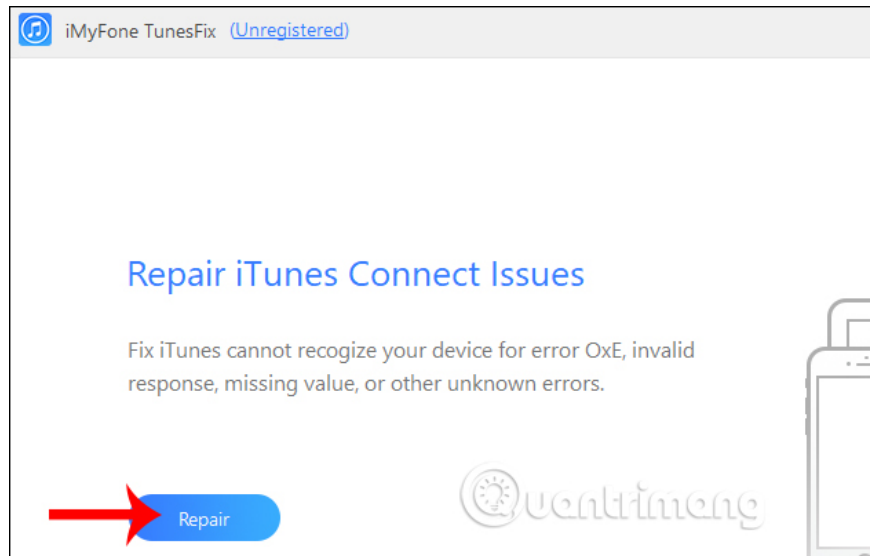

Shortly thereafter the scanning and deleting data will take place. As a result, users will know the total amount of data deleted on iTunes.

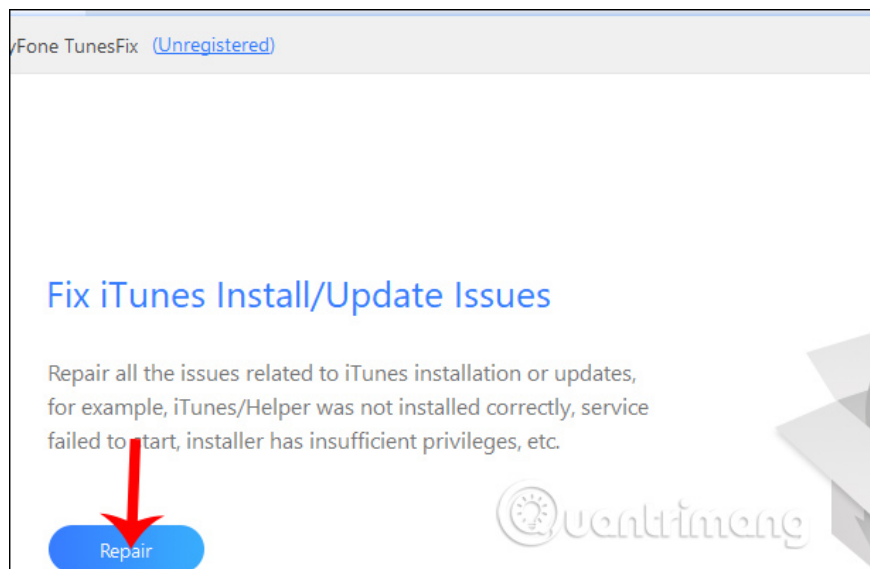

Step 5:

Next, users will use other error correction options for iTunes, click **Repair iTunes Connect Issues** to fix **iTunes connection problems** . Click Repair to the tool to determine the error that iTunes is experiencing and to repair.

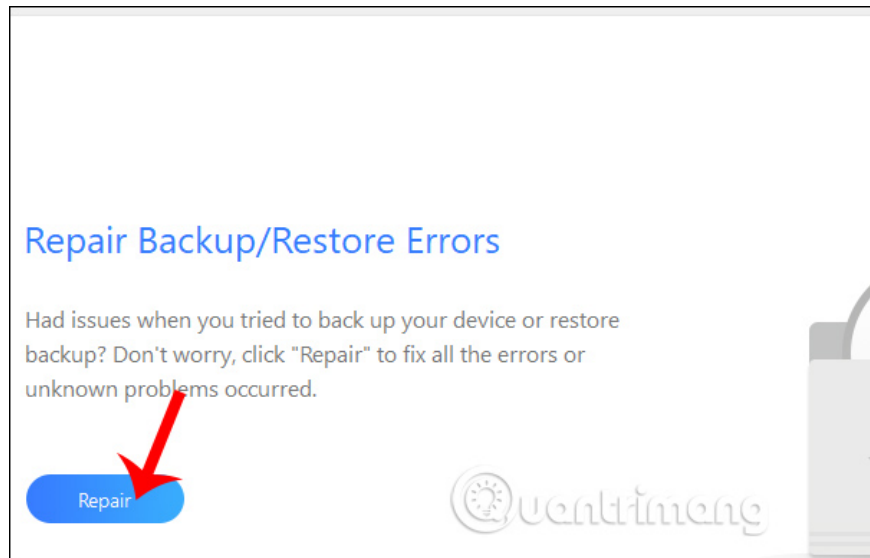

Step 6:

If iTunes has **problems installing or upgrading** , click **Fix iTunes Install / Update Issues** .

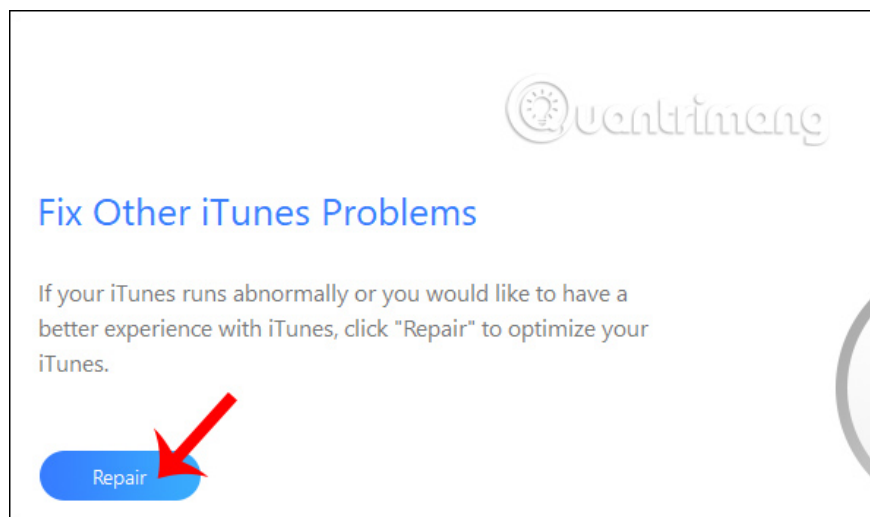

Step 7:

Next, **Repair Backup / Restore Errors** will fix **backup errors and restore iPhone on iTunes** .

Step 8:

If the user does not know what iTunes error is, click **Fix Other iTunes Problems** . Note that all editing options for iTunes require a stable Internet connection.

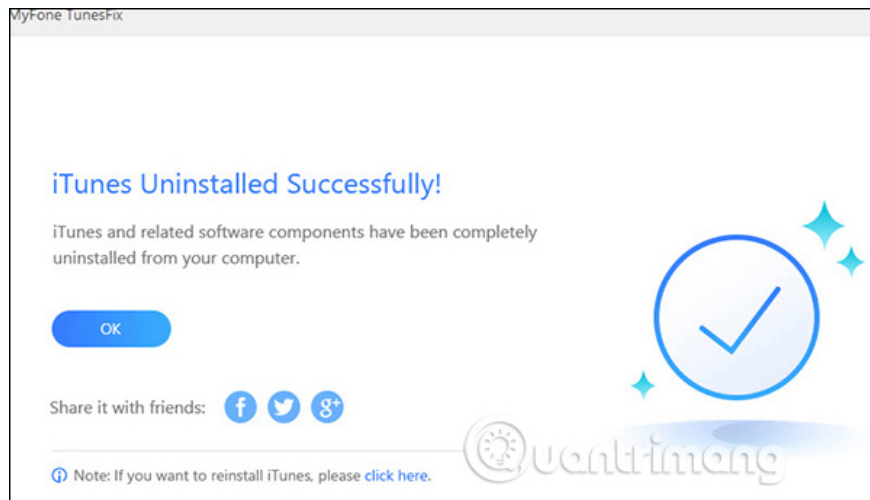

Step 9:

iMyFone TunesFix also has an option to **uninstall the iTunes software along with all iTunes user data** if you want to delete. Click **Full Uninstall** , then check **Also delete user** if you want to **delete user** data. Click Uninstall to continue.

At this point the uninstall process takes place, when successful we will receive a notification as shown below.

iMyFone TunesFix offers an effective iTunes debugging tool including deleting user data on iTunes. However, with the trial version of iMyFone TunesFix, the features are very limited, incomplete as with the paid version, so users should pay attention.
