

How to fix errors that are not backed up are noted on OneNote 2016

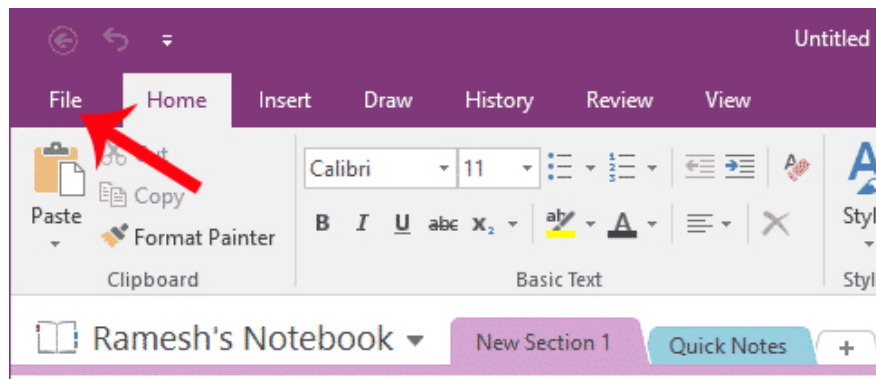

To be able to restore notes on OneNote, we often find them from backups. However, in case the note is not saved to the backup area on OneNote 2016, how to do it?

OneNote is one of the most popular note-taking tools available on computers, as well as smartphone apps. Users can easily note all tasks and track them from notes on OneNote at any time. However, there is an error on the OneNote 2016 version that does not save notes to the storage area, making it difficult to restore notes if necessary. In the article below, we will show you how to fix saved failures noted in the backup area on OneNote 2016.

1. Download OneNote for Android
2. Download Microsoft OneNote for iOS
3. Download the Office 2016 suite

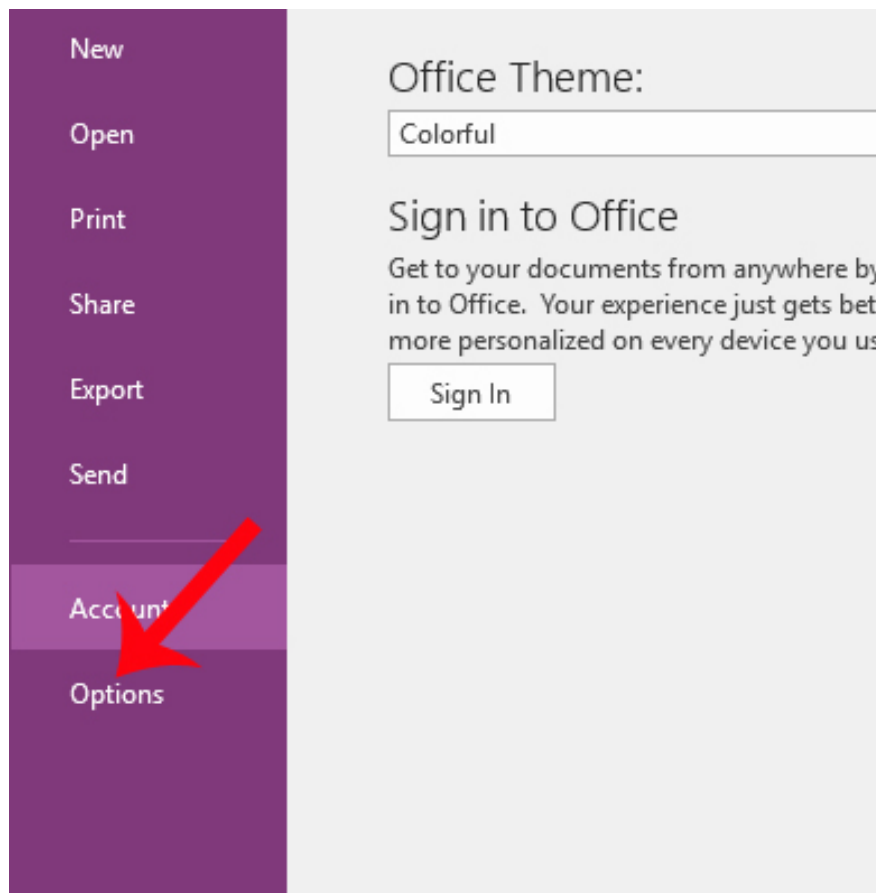

Step 1:

First we start OneNote on the computer. At the main interface, click on the **File** item on the same interface.

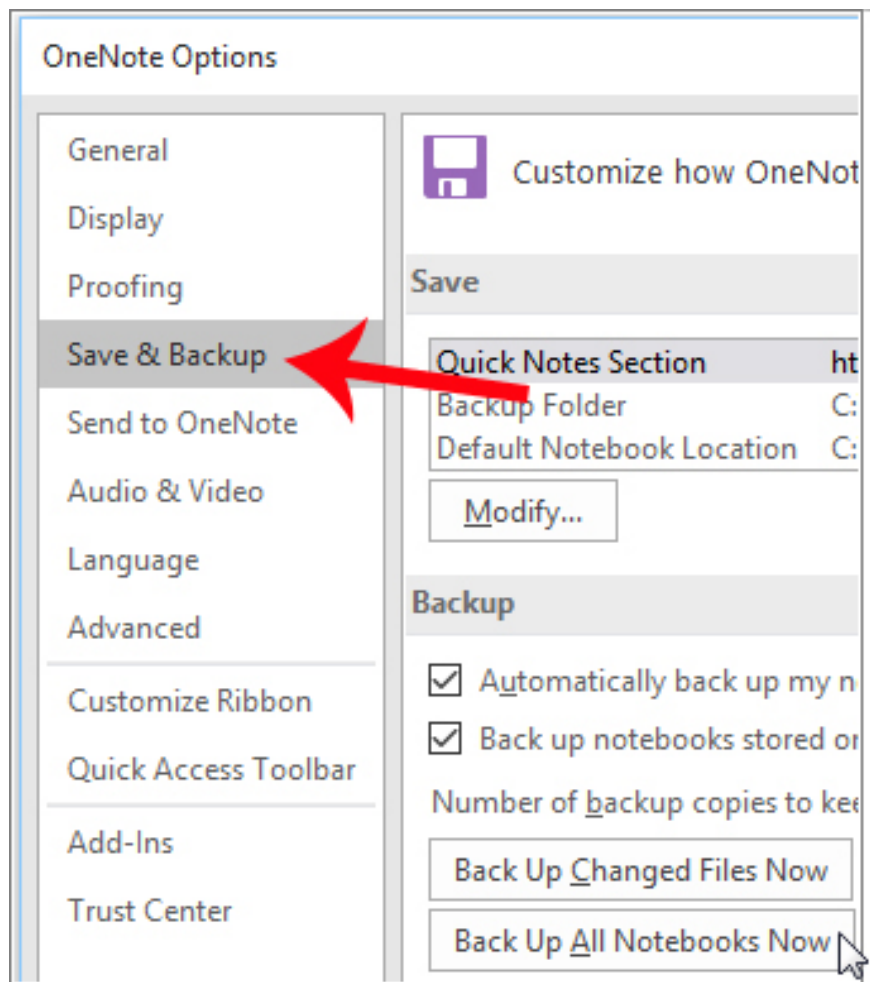

Step 2:

On the new interface, we will click on the **Options** item at the bottom of the list to the left of the interface.

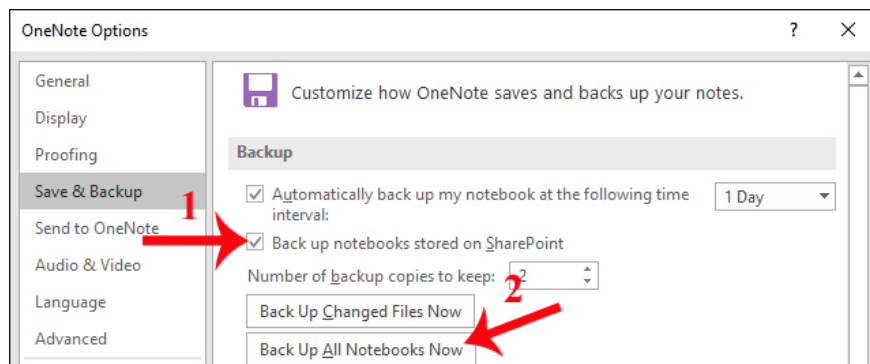

Step 3:

In the OneNote Options dialog box, we will click on the **Save & Backup** item in the list on the left of the interface as shown below.

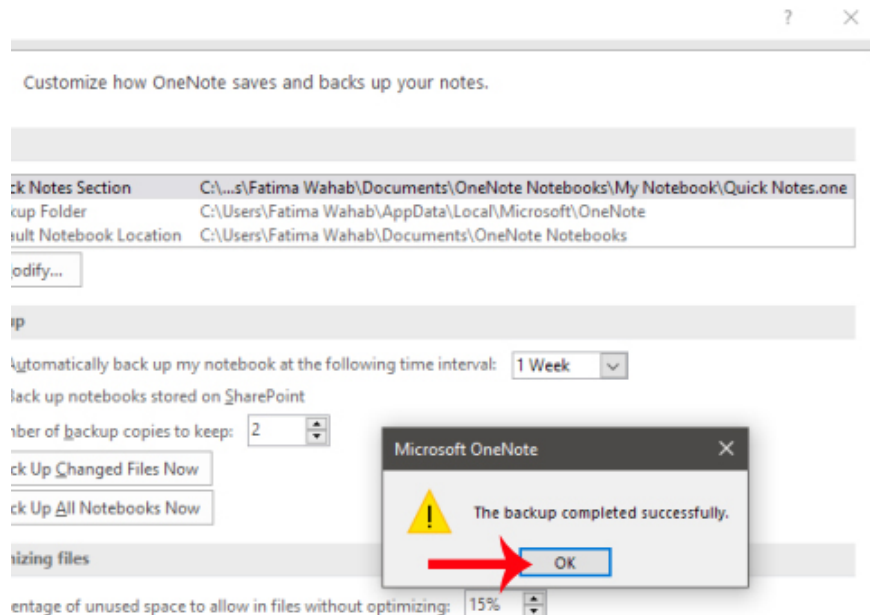

Step 4:

Looking at the interface to the right of the Backup section, we will select the item **Back up notebooks stored on SharePoint** and click **Back Up All Notebooks Now** below.

Immediately after that appears a small dialog box with the message **The backup completed successfully** means that it has been successfully archived, click **OK**.

So we proceeded to store notes in the backup area on OneNote through SharePoint. Error messages, unable to store notes on OneNote will not occur.
