Instructions to fix installation error, update Opera

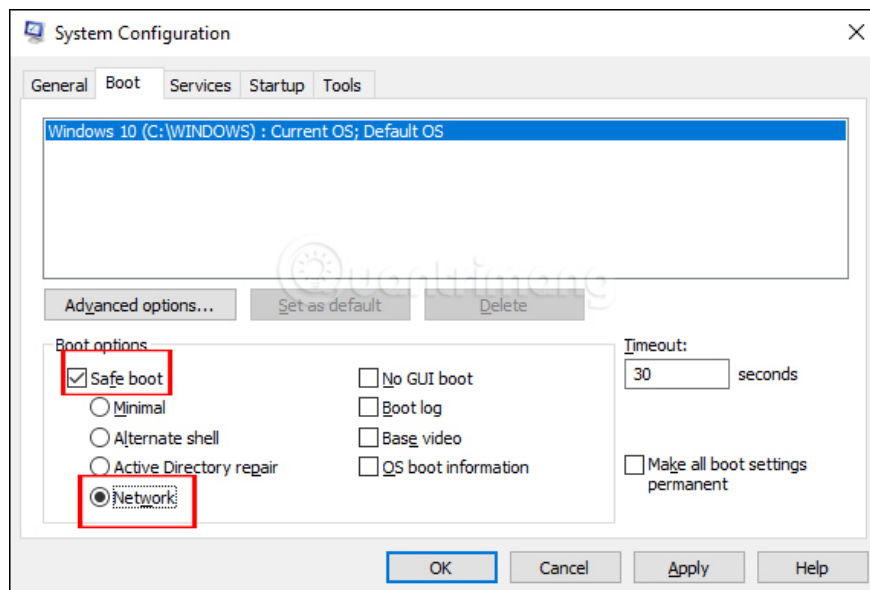

Step 1:

We open the **Run dialog box** and enter the **keyword msconfig** and press Ok to access.

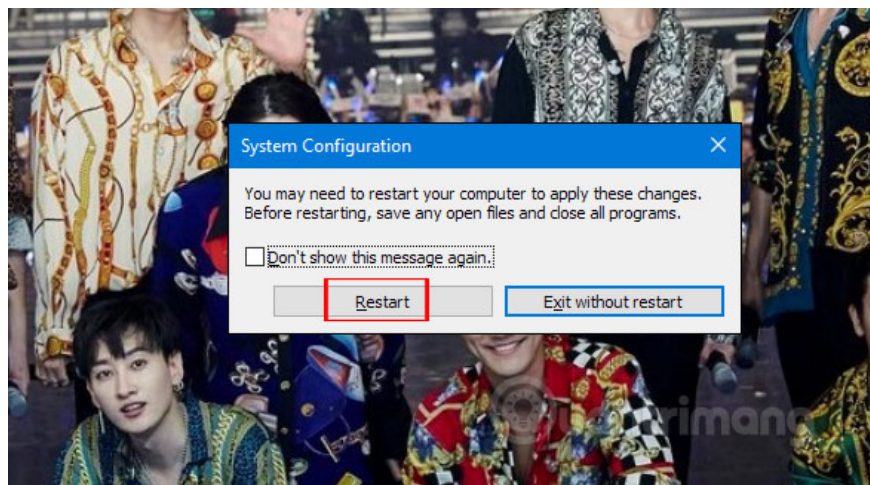

Step 2:

Displays the **System Configuration** interface. Here the user clicks on the **Boot tab** and selects **Safe boot** and **Network** . Click Ok to save.

Step 3:

Next we restart the computer by clicking **the Restart button** in the interface shown below.

When the computer is restarted, we proceed to install and upgrade Opera browser as usual. Then return to the System Configuration interface and uncheck Safe boot to bring the computer to normal mode.

So we know how to fix the installation and update Opera browser. If there is a problem with updating Opera browser, try cleaning the cache on your browser and computer and restarting the computer. If not, apply the method to start the computer from Safe boot mode as above.
