

How to fix Laptop does not recognize the battery

Although the laptop battery design is more popular, but they still can not occupy the market share but still have to make room for the removable laptop battery.

Laptops with removable batteries have many advantages such as: Easy to change the battery, use many different batteries to prolong time, remove the battery when charging, . However, they often encounter Laptop error that does not accept the Battery and this is a Relatively annoying errors. In this article, Software Tips will guide you how to fix Laptop not receiving battery.

1. Clean the pins connecting the Battery and Laptop

In order for you to better understand Laptop Battery, the Software Tips will share to you the following information: Laptop battery is in contact with Laptop through pins of copper and copper which are easily oxidized and Oxidation directly affects the transmission connection. Besides, dirt is also the biggest enemy of all kinds of different connection pins.

For this case, you should clean the pin connector pins of both the Battery and Laptop. Normally we will clean with specialized solutions, but you can choose 90 degrees alcohol to easily buy and find on the market.

Prepare:

1. 90 degrees alcohol
2. Cotton swab
3. Towel

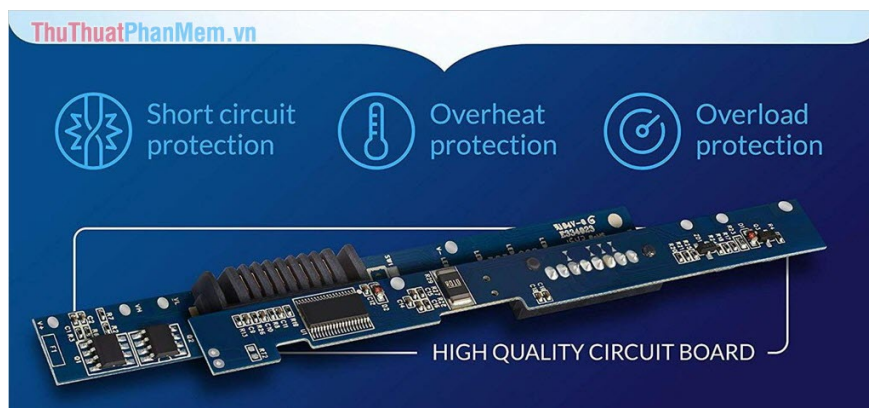

Actions: Wet the cotton swab with 90 degrees alcohol and conduct cleaning of copper pins of the Laptop and Battery. For narrow contact slots, be clever to choose to bring all the internal dirt out.

2. Laptop battery has problems

For laptops using removable batteries, the battery is usually made up of many small cells and soldered to each other via wires. During use, there may be a problem with the cable or Cell Battery leading to a short-circuit or disconnection that makes the Laptop Battery no longer usable. In this case, the only way to remove the Laptop Battery is to see what is inside them and fix them. For those who do not have experience in electronics, do not remove the battery to see the inside because they can damage or affect warranty issues (if available).

3. The circuit in Laptop board is broken

In order to receive power from the battery, the laptop will have a small circuit board to do this, if the board has a problem or they are disconnected from the motherboard, they also cause the computer to not receive the battery. For this case, perhaps you have to bring the Laptop to a reputable repair shop to replace or warranty them.

4. Temporarily overcome by plugging in the charger to use

For laptops that can remove the battery, you can remove the battery and plug in the charger to use the power source directly from the charger. This is a way many people use because they usually do not affect the battery and the computer has a higher performance than using the power from the battery. In general, this is a temporary fix because the Laptop that must be plugged constantly, just like a normal desktop.
