

How to fix laptop keyboard not working error on Windows 10

Detailed instructions to fix laptop keyboard not working error on Windows 10. Update drivers, edit keyboard settings, disable quick boot.

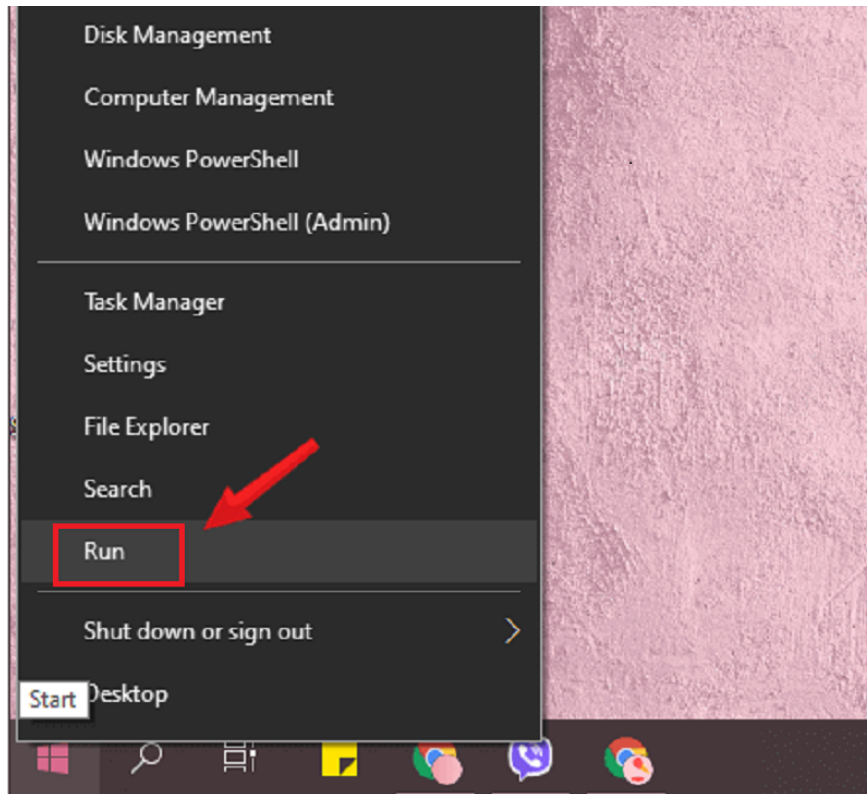

Sometimes you are operating on the laptop such as typing, searching for information . suddenly your computer has a problem when the keyboard is no longer working, hindering your manipulation and work. Here are some common ways to help you fix this problem.

1. Restart the laptop

First you try to Restart the computer to see if it fixes this situation, because sometimes it is due to software conflicts on the computer .

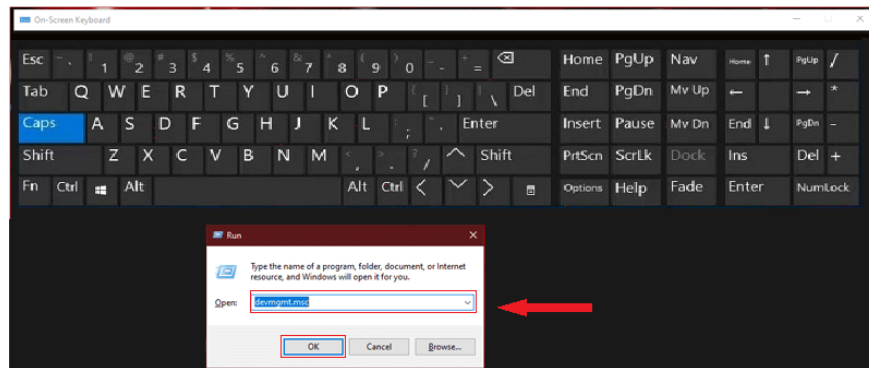

2. Update the driver again

Step 1 : Right-click the **Start** button in the bottom left corner and then click **Run** . Or you can press **Windows** + **R** key combination .

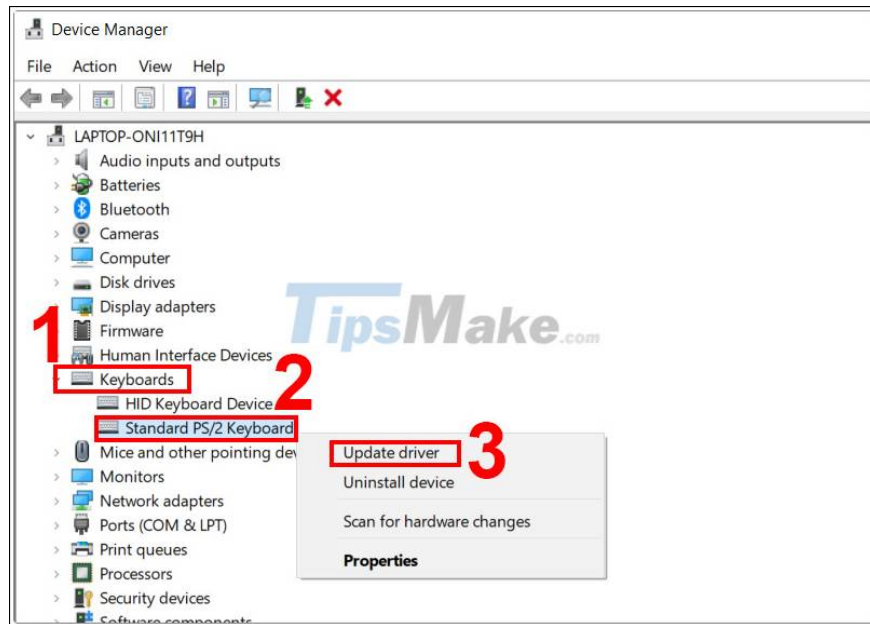

Step 2 : Type the command **devmgmt.msc** using the virtual keyboard> Select **OK** .

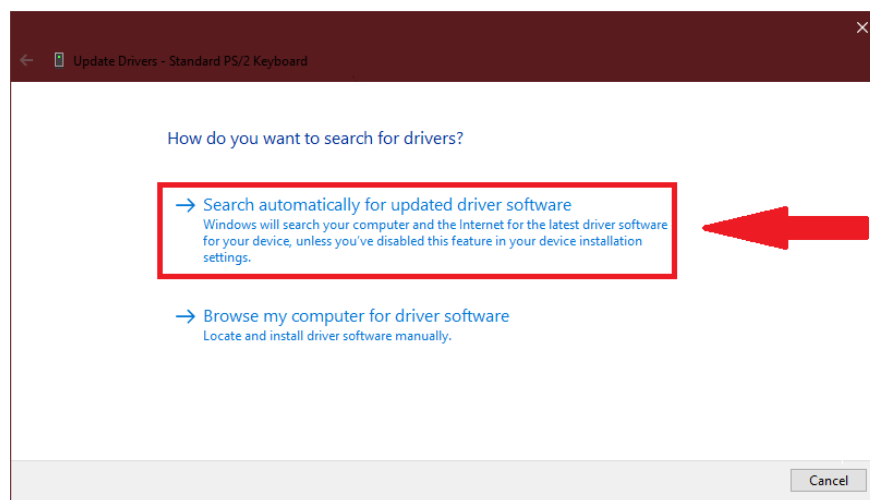

You can refer to more details on how to open the [virtual keyboard on Windows 10 HERE](#) .

Step 3 : In the [Device Manager](#) window , click **Keyboards** > **Right-** click the keyboard you use, select the option **Update Driver** .

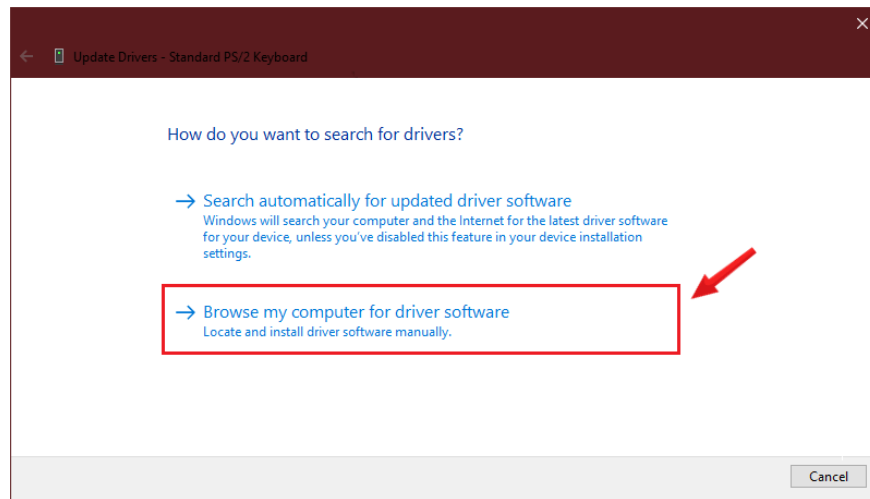

Step 4 : Select **Search automatically for updated driver software** and complete the update process.

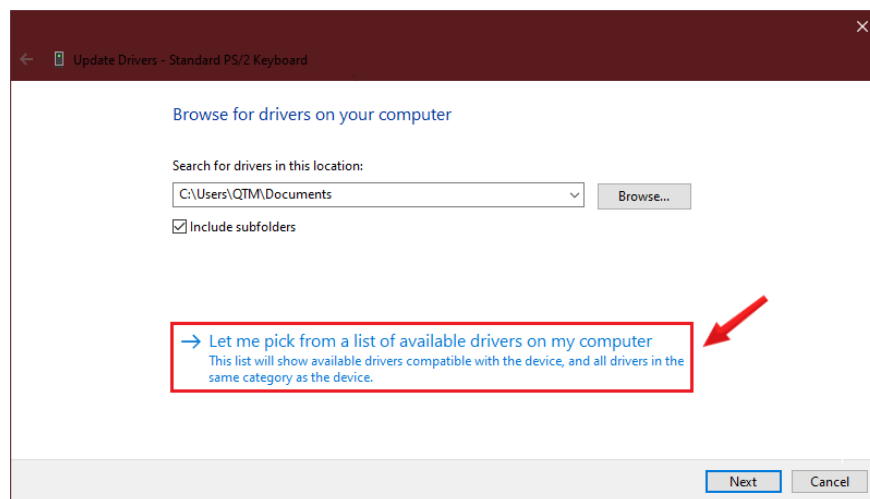

When the process is finished, close the device manager window and reboot your PC.

If you still can't fix the problem, follow these steps:

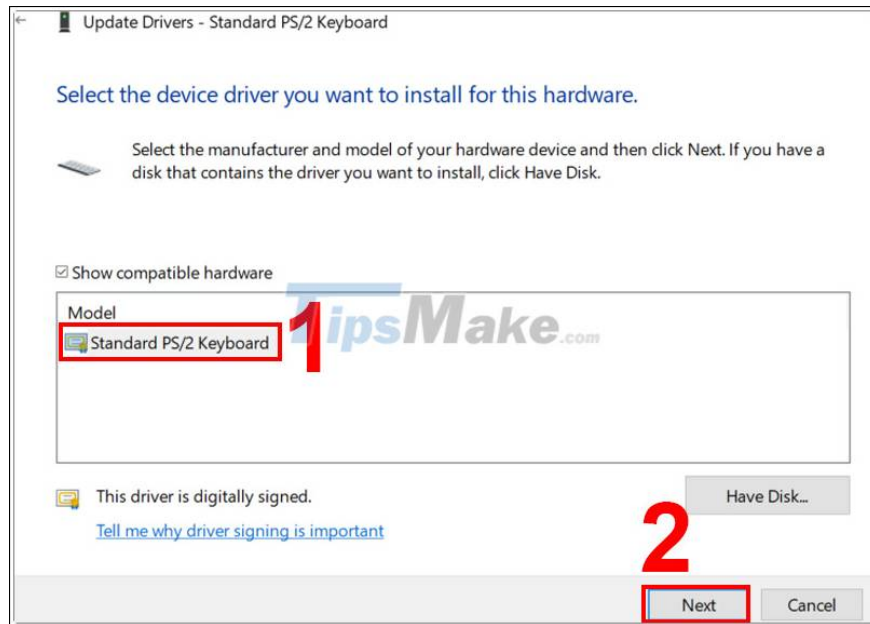

Step 5 : Select **Browse my computer for driver software** .

Step 6 : Select **Let me pick from a list of device drivers on my computer .**

Step 7 : Select the appropriate driver from the list and click **Next .**

Step 8 : When the process is finished, close the device manager window and reboot your PC.

Alternatively, click the **Action** tab > Select **Scan for hardware changes** .
