

How to fix not seeing other machines on the Windows 10 LAN

LAN is an internal Internet system with typical features such as fast data transmission speed, good security and inexpensive maintenance costs. However, we sometimes encounter the error of not being able to see other machines on the Windows 10 LAN, affecting our work.

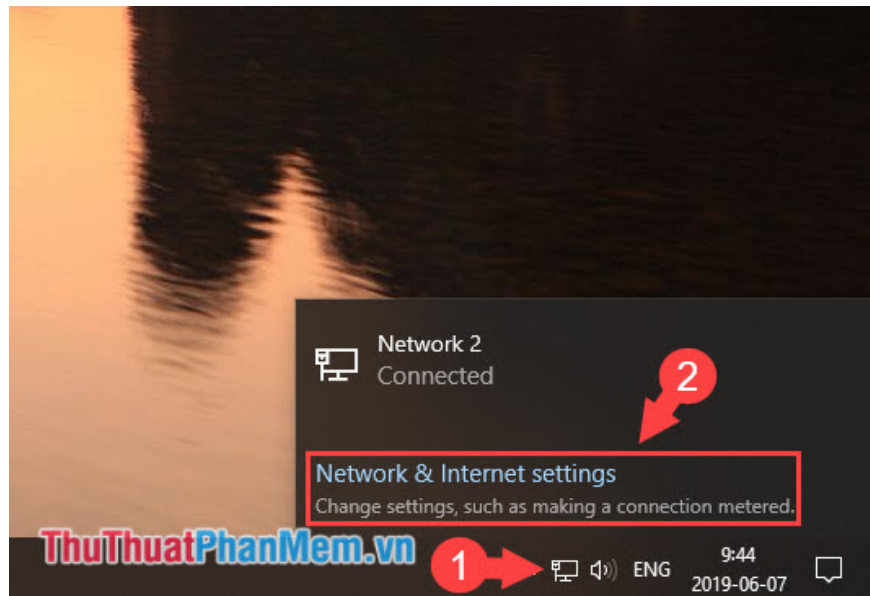

LAN is an internal Internet system with typical features such as fast data transmission speed, good security and inexpensive maintenance costs. However, we sometimes encounter the error of not being able to see other machines on the Windows 10 LAN, affecting our work. So how to fix that error? Invite you to follow the article below.

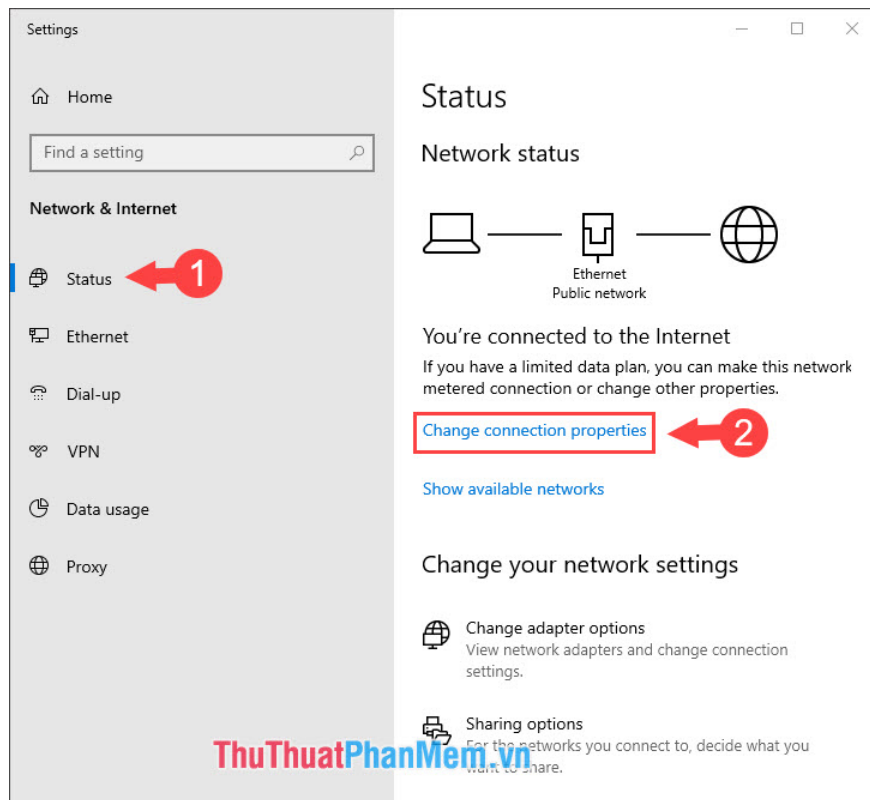

To fix the error of not seeing another computer on the LAN on Windows 10, follow these instructions:

1. Check the LAN settings

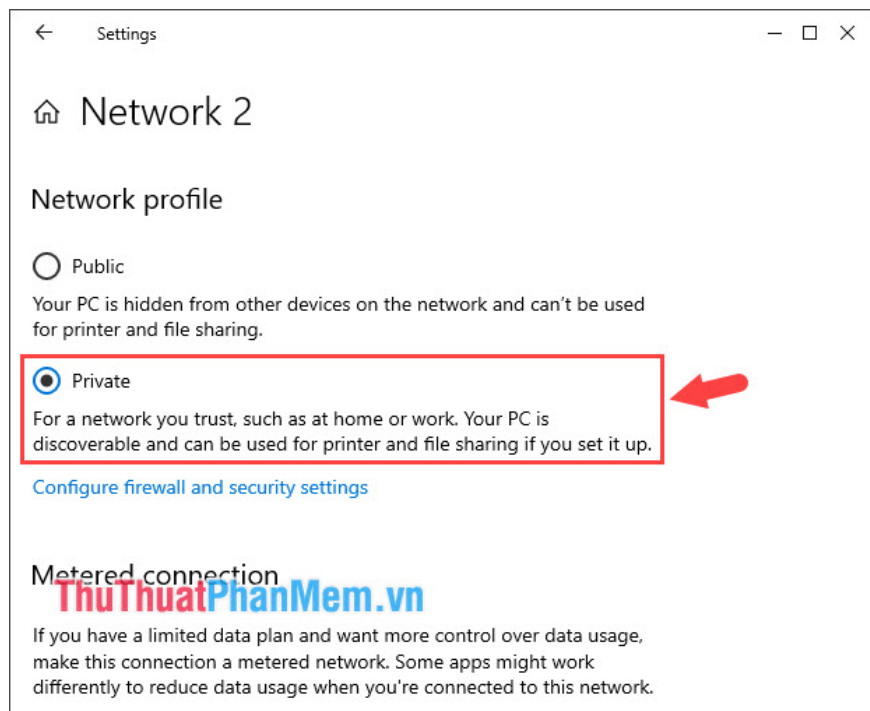

Step 1: Click on the **Network** icon (1) and select **Network & Internet settings** (2) .

Step 2: We choose **Status** => **Change connection properties** .

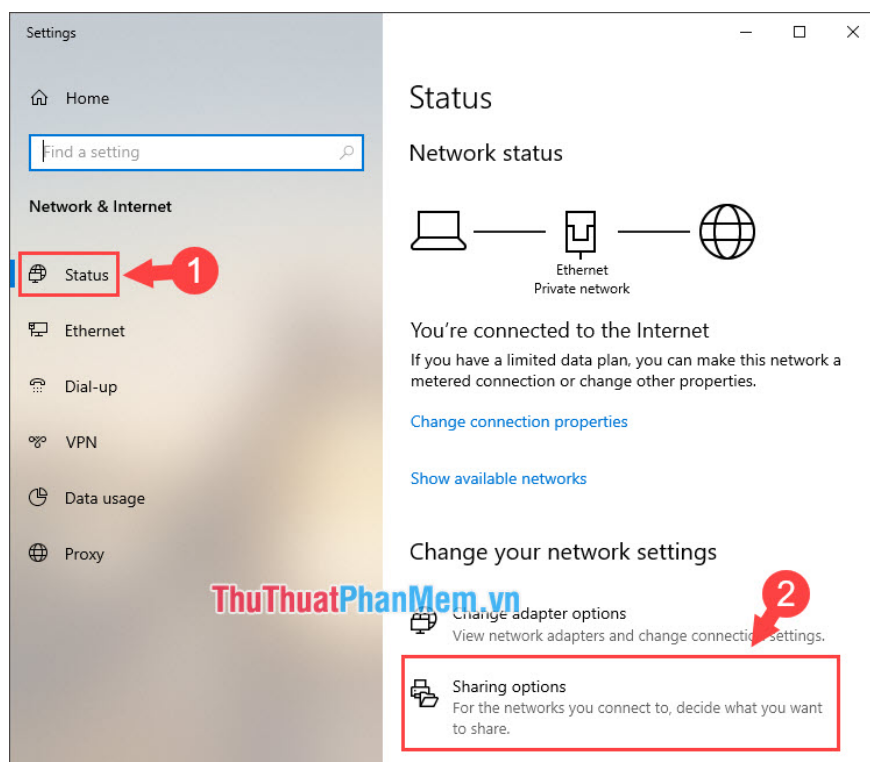

Step 3: In the **Network Profile** section , we switch to **Private** to the computer.

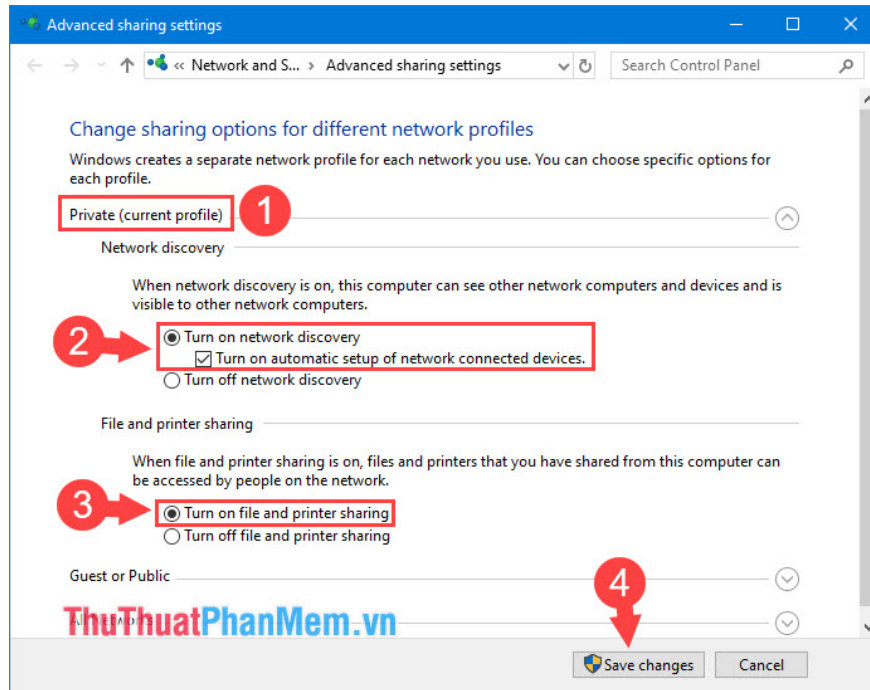

2. Turn on Network discovery

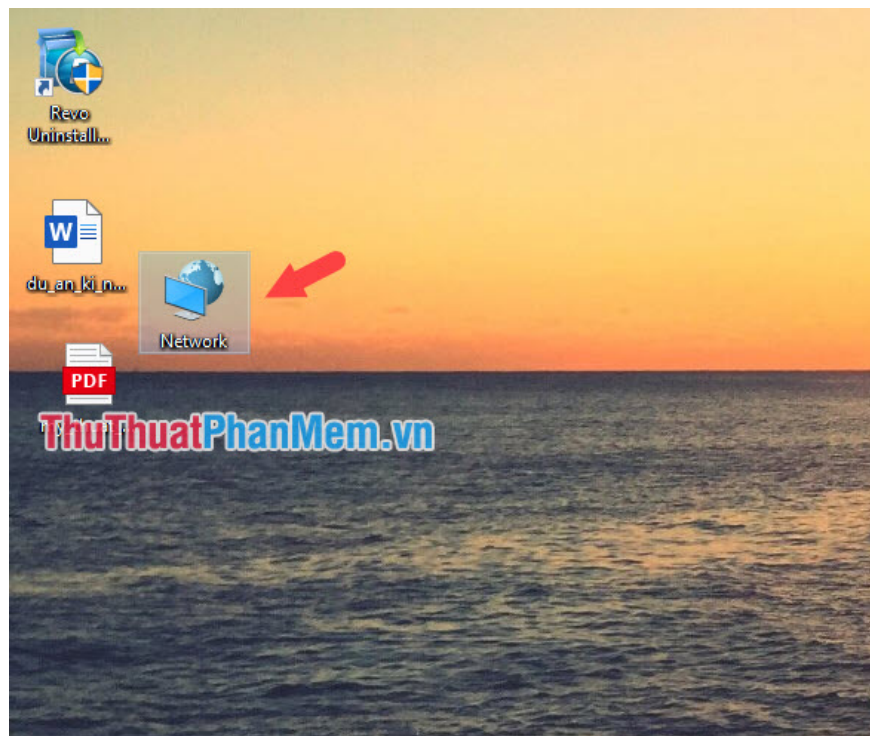

Step 1: Go back to **Network & Internet settings** => **Status** => **Sharing Options** .

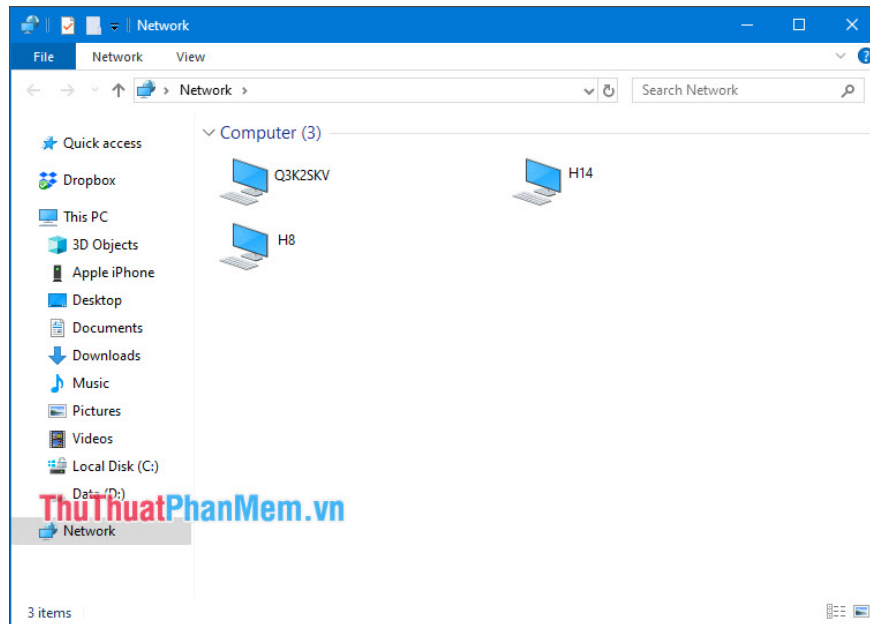

Step 2: We choose **Private (current profile)** (1) => **Turn on network discovery** (2) and **Turn on file and printer sharing** (3) . Then click **Save changes** (4) to save.

Step 3: After setup is complete, we open **Network** to check.

If the complete computer list as shown below is successful.

Fix the error of not seeing another machine on the LAN is simple and easy, isn't it. If you follow the instructions above and still do not see other machines on the LAN, please check the remaining devices have changed the Network profile to Private or not! Good luck!
