

How to fix Registry disabled by administrator error on Windows

Registry editor helps to manually set the settings in Windows. Sometimes this function is disabled due to Virus, ... Registry disabled by administrator

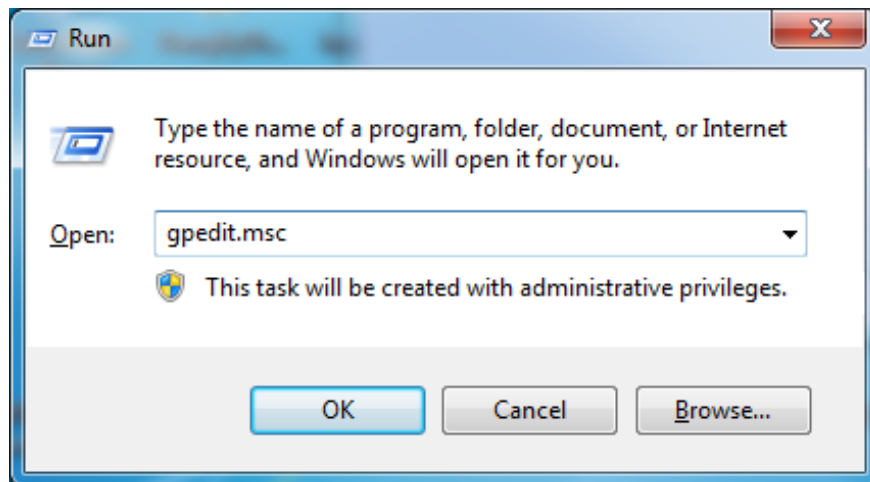

Registry editor is an important **Windows** utility that allows you to change many settings in Windows.

Sometimes you want to use this feature, but you cannot turn it on because it is locked by the administrator or it may be because your computer is infected with a virus. We will show you how to **fix the ' Registry editing has been disabled by your administrator' error.**

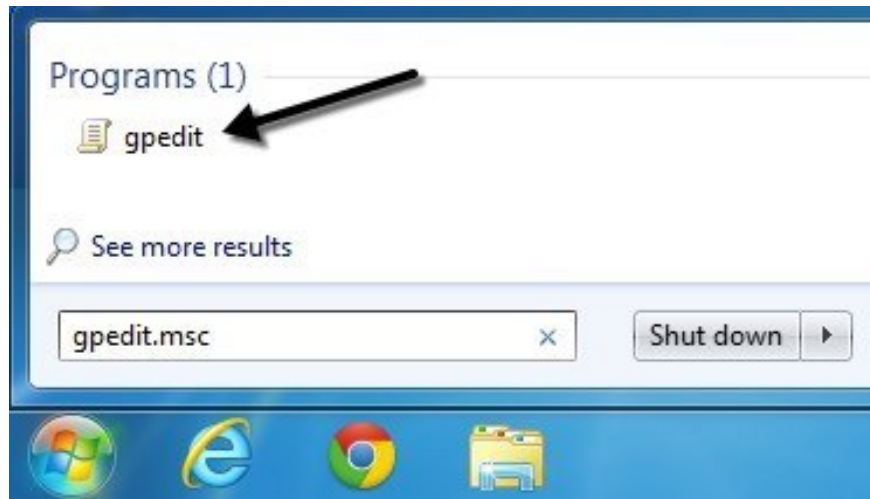

Method 1 - Open Registry Editor in Group Policy Editor

Step 1 : Select **Start** in the search box, type Run command, a **Run** dialog box appears on the screen

Step 2 . You type **gpedit.msc** and press **Enter** as shown below

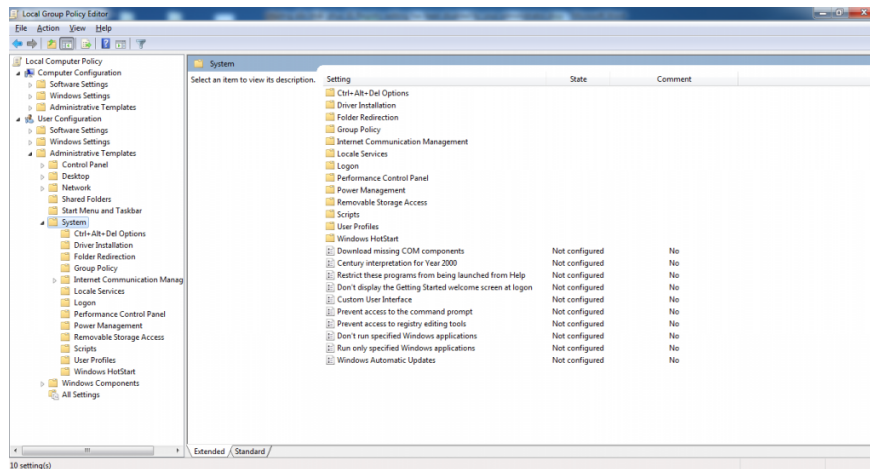

Or you can Search directly **gpedit.msc** in the Search box at the Start button of Windows 7 or on the Charmbar of Win 8, 8.1, 10. Then select open as shown below:

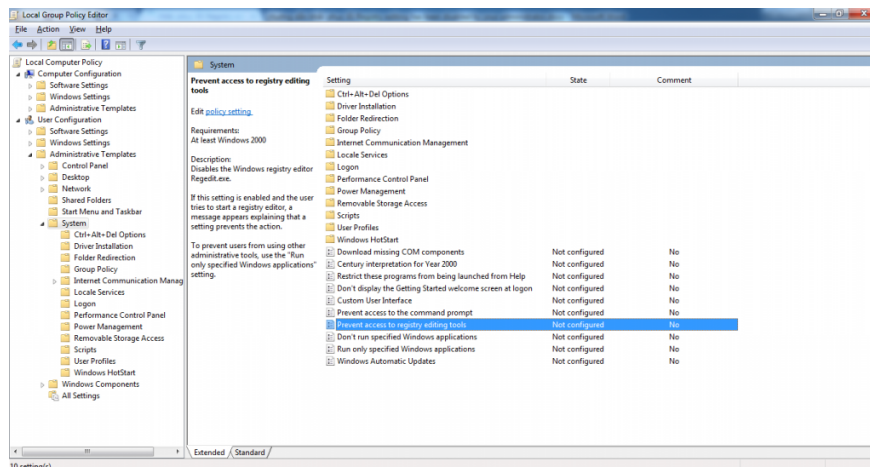

Step 3 : Display on the screen a **Local Group Policy Editor** window

Step 4 : Select the order according to the path to the **User Configuration / Administrative Templates / System** section as shown below

Step 5 Next, select the right side, double-click on ' **Prevent Access to registry editing tools** '.

Step 6 Inside the **Prevent Access to registry editing tools** window select **Not Configured** and click **Ok** to enable the registry editing. Note that you remember to **restart the computer** after completing the above steps

Method 2

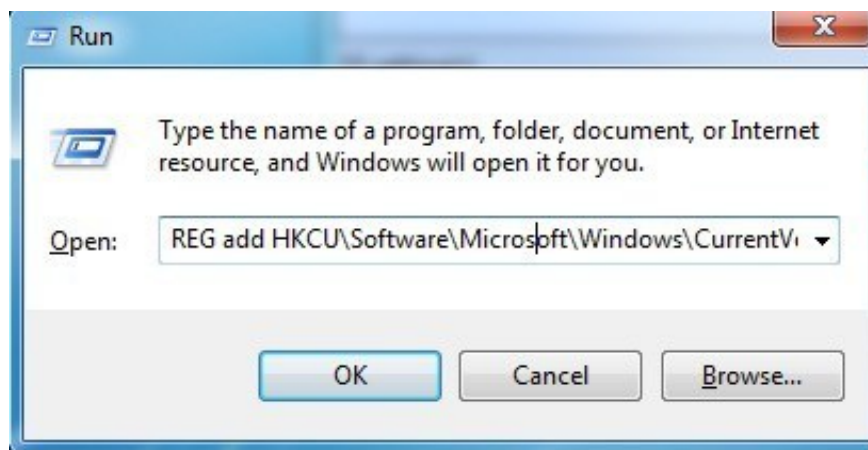

You can also use **Notepad** to save the following code as an **EnableRegistry.bat** file

```
reg add 'HKCUSoftwareMicrosoftWindowsCurrentVersionPoliciesSystem' / t Reg_dword / v  
DisableRegistryTools / f / d 0
```

Then run the newly created **EnableRegistry.bat** file under Admin (Right-click select Run as Administrator) and then restart the computer or Log Off and Log in again.

Method 3

You can run the command line directly from **Method 2** in the **Run** window.

Press the keyboard shortcut Windows + R to open the RUN dialog box. Then Copy and Paste the following:

```
REG add HKCUSoftwareMicrosoftWindowsCurrentVersionPoliciesSystem / v  
DisableRegistryTools / t REG_DWORD / d 0 / f
```

Press Enter or OK. Then also restart the machine.

Good luck!
