

How to fix Samsung Galaxy S8 to restart automatically

Although the Galaxy S8 is built with more modern features, far more advanced than other models, however, this device sometimes has problems such as restarting itself.

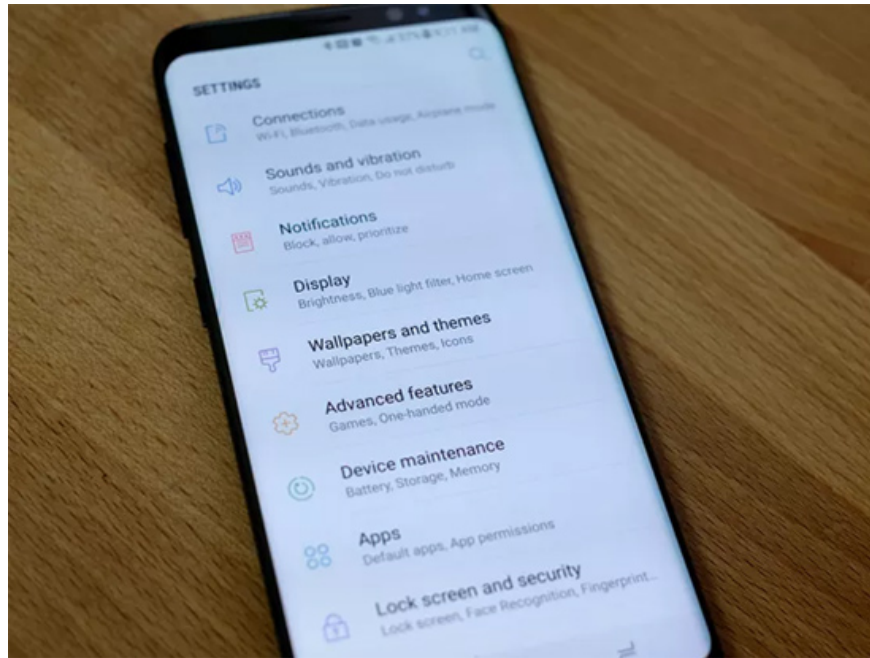

Samsung Galaxy S8 launches users with significant improvements not only to design the external screen with infinity, but the features or the system is also upgraded more than the previous generation Samsung. However, Samsung Galaxy S8 also cannot avoid errors that many devices encounter, such as restarting the device, even though this phenomenon rarely occurs. Self-restarting the phone greatly affects users. So what causes the Galaxy S8 to restart itself and how to fix it?

1. Galaxy S8 restarts because the application runs in the background:

If you see the Galaxy S8 automatically rerun, try to check the applications running in the device. These applications that run in the background can conflict with the system and indirectly cause the machine to reboot to escape the conflict.

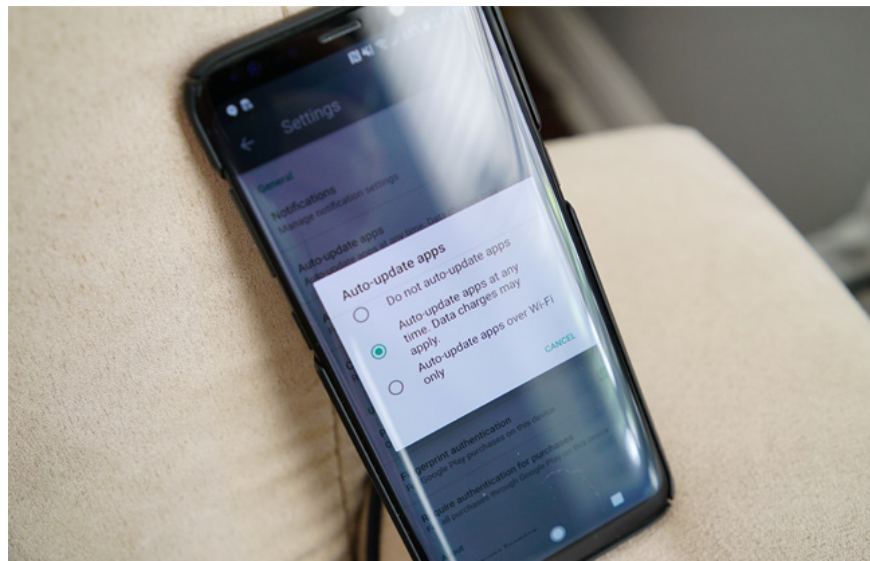

To turn off applications that run in the background, users access the **Settings> Application Management** to turn off applications running in the background. Besides, turning off the application running in the background also saves battery significantly.

1. Some ways to increase battery life for Samsung Galaxy S8

2. Restart Galaxy S8 by not updating the application

A reason for the device to restart itself may be because the application installed on the device is outdated, not updated to the latest version. Older versions of the application often have a number of errors, causing conflicts with the system's programs, resulting in the machine to restart automatically. Please check the applications on the system and proceed to update them.

3. Viruses that cause errors to reboot on Galaxy S8:

Viruses entering the device will also attack the system, causing slow device, application operation errors or restarting themselves. It is possible for users to download applications from untrusted and genuine sources, but

on floating sources, the virus follows. Use the device security program, scan the system for viruses, and not download the application in unofficial places.

1. The rules need to know to enhance the security of iPhone, iPad and Android

4. Galaxy S8 automatically restarts due to not updating the operating system:

1. How to check and update the version of Android operating system in use

A major cause of a device restart error is that the user has not updated to the latest operating system. Older versions often cause errors in the system, do not meet the needs of running the application, . Users should check the current operating system and update to the new version to fix the existing bugs in the version old.

If your Samsung Galaxy S8 has a self-restart error, please refer to the above article to fix it yourself. However, if the error still occurs frequently, users should bring the device to a genuine Samsung service center to immediately correct this error on the device.
