

How to fix Snipping Tool keeps showing error

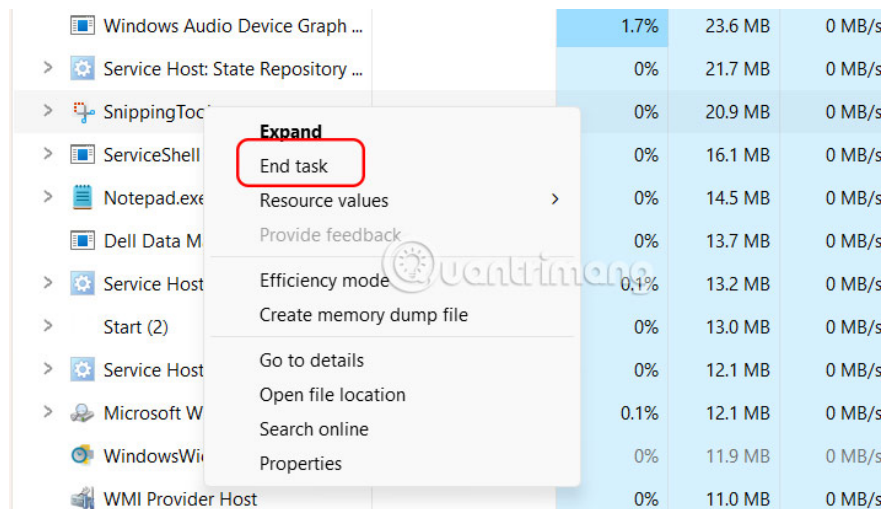

Snipping Tool is a powerful photo and video capture tool on Windows. However, this tool sometimes has some errors, such as constantly displaying on the screen affecting the use of other tools.

Snipping Tool is a powerful photo and video capture tool on Windows. However, this tool sometimes has some errors, such as constantly displaying on the screen affecting the use of other tools. Below are some ways to fix the error of Snipping Tool constantly displaying.

Turn off Snipping Tool in Task Manager

A quick way to disable Snipping Tool is to turn it off in Task Manager.

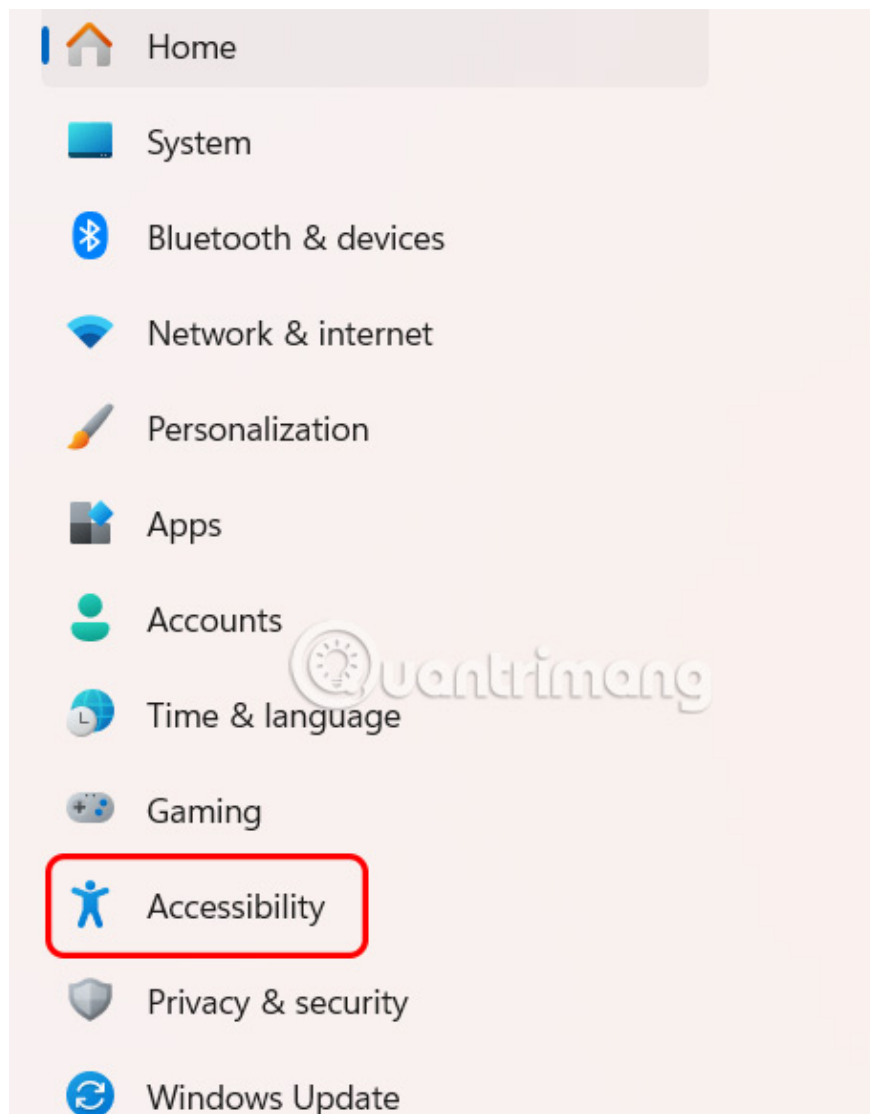

Open **Task Manager** on your computer, then **right-click on Snipping Tool** in this list and **select End Task** to completely close this tool on your computer.

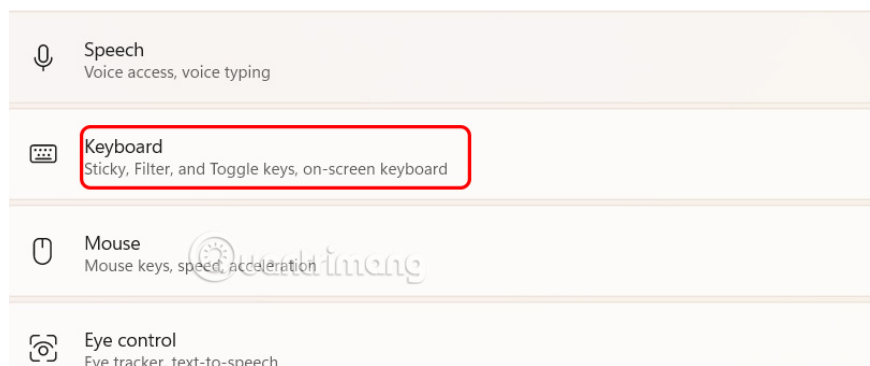

Turn off Snipping Tool shortcut

If Snipping Tool keeps opening every time you press the Print Screen key, then this shortcut may be set in the settings so you can just turn it off.

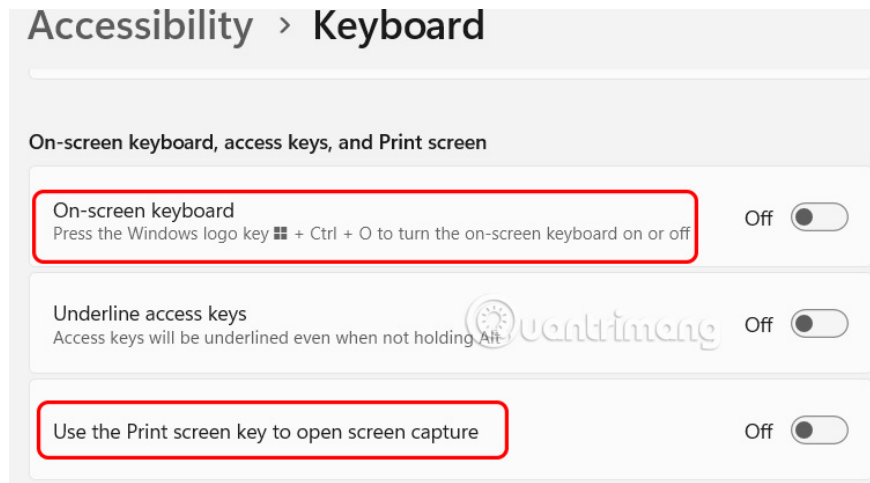

Press **Windows + I** to open **Settings** and select **Accessibility** .

Next, look to the right and click on **Keyboard** to adjust the shortcut keys on your Windows computer.

Now you scroll down to **On-screen keyboard** and **Use the Print screen key to open screen capture** and then **turn it off**.

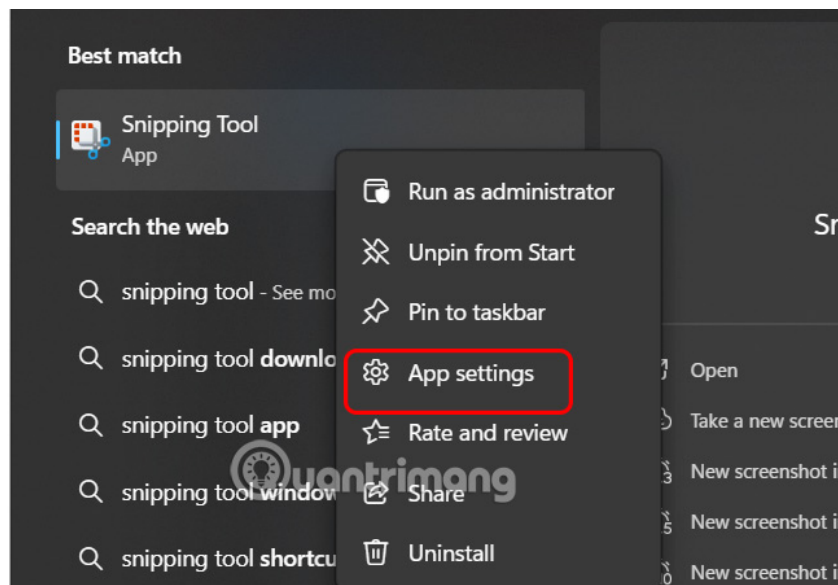

Reset Snipping Tool

If the above doesn't solve the problem, you can try resetting Snipping Tool to factory settings.

Step 1:

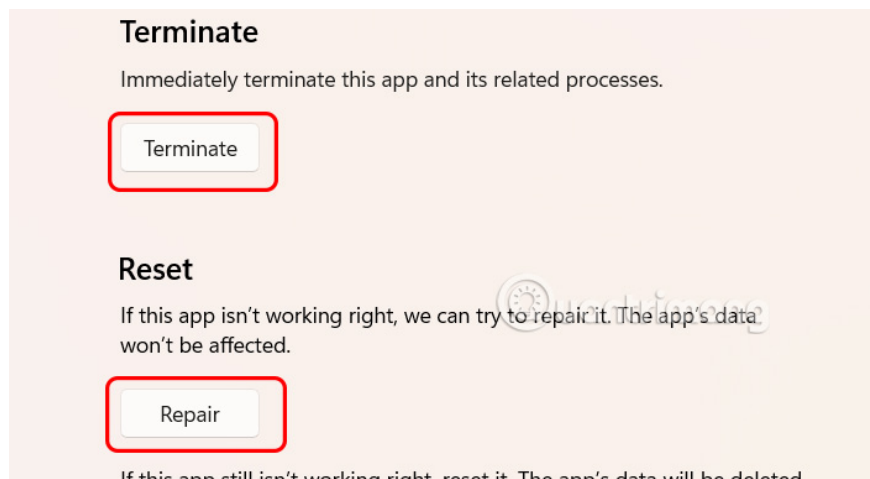

You type **Snipping Tool** in the search bar and then right-click, select **App settings** in the displayed list.

Step 2:

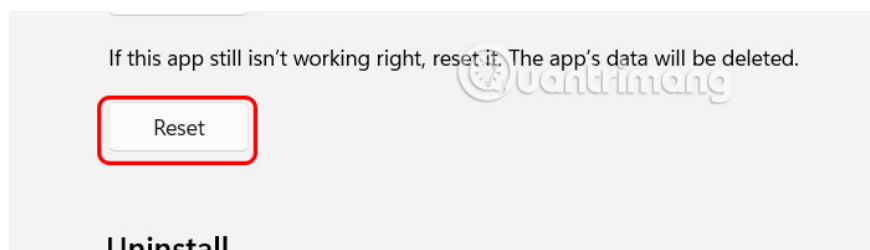

In the new interface that appears, scroll down and **click Terminate** to stop all activities related to Snipping Tool.

Next **click the Repair button** to repair the tool.

Step 3:

If that doesn't solve the problem, **click the Reset button** below to clear all app data and start over.

Uninstall Snipping Tool application

If you have tried the above solutions, you can try uninstalling the application and reinstalling it on your computer.
