

How to fix the error does not install the default Windows 10 application

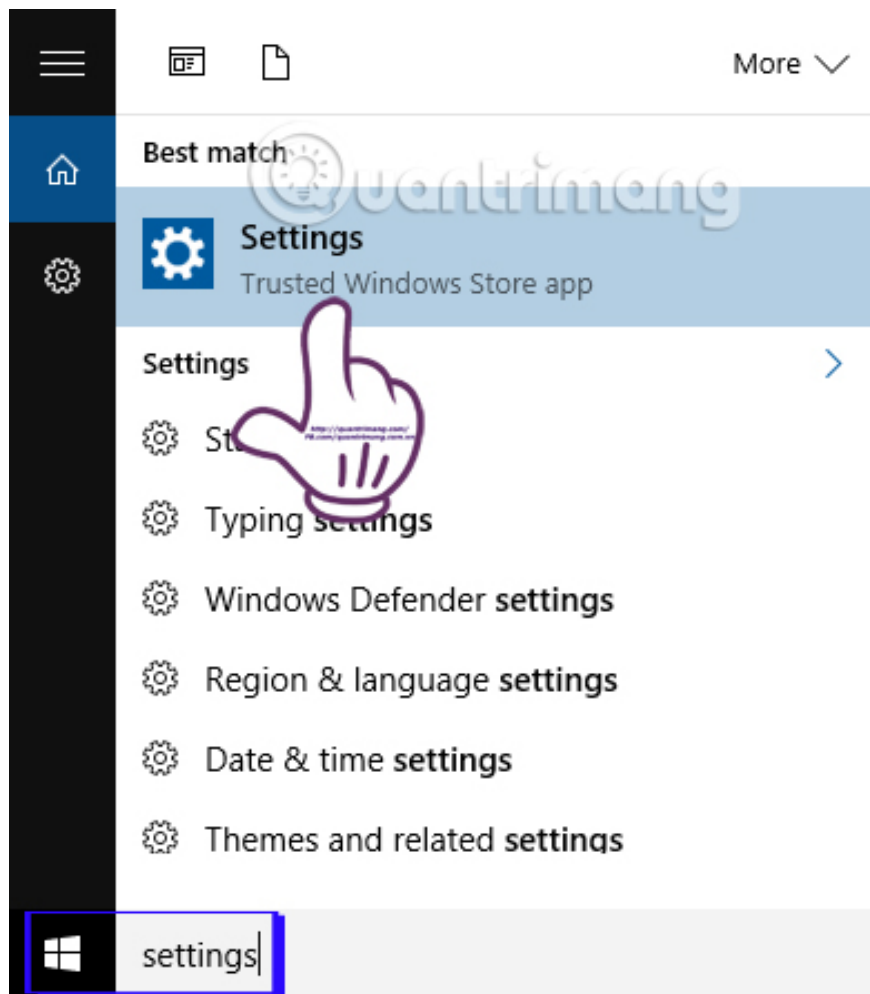

Windows 10 supports users to install the default browser or application on the computer. Files and links will automatically be opened according to the default installed application. However, if the Settings is faulty and we cannot set the default application on Windows 10, how do we do it?

Most Windows and Windows 10 versions have the default application mode, depending on each user's preference. From setting the web browser, the application for listening to music or watching movies can be selected to be set as default when opening the file or accessing the link.

For those who use Window 10, we will adjust the default application in the Settings section. However, Windows 10 is very likely to fail to install the default application, and files are not linked to supported formats. Therefore, when you open a file, you need to select an application or browser to open it. So how to handle this problem? Network administrators will tell you how to fix it when you can't set the default application on Windows 10, with a very simple way to do it.

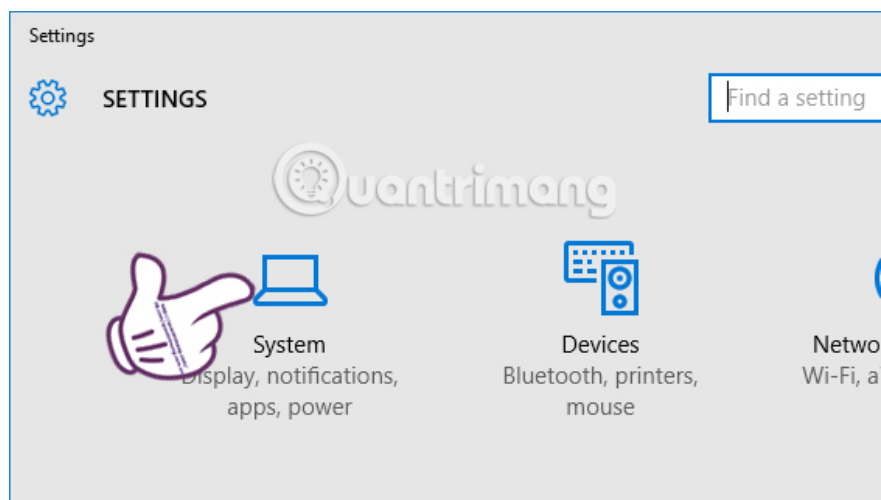

Step 1:

First of all, at the Windows search bar we enter the **Settings** keyword and access the results.

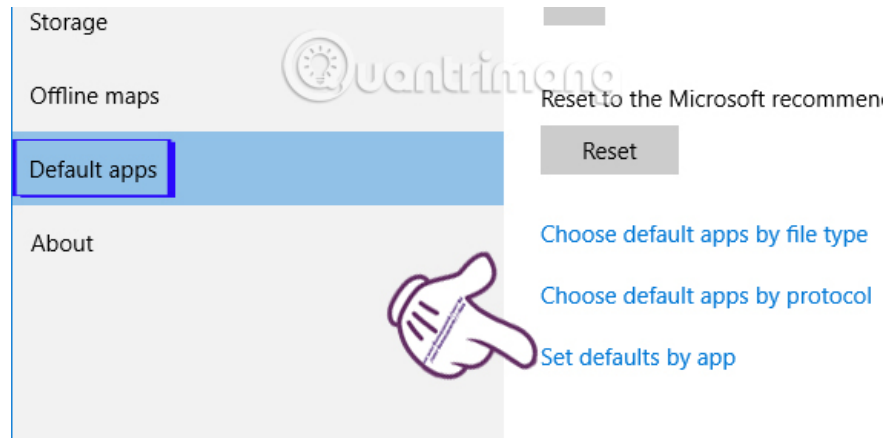

Step 2:

Next in the Settings interface, click on **System** .

Step 3:

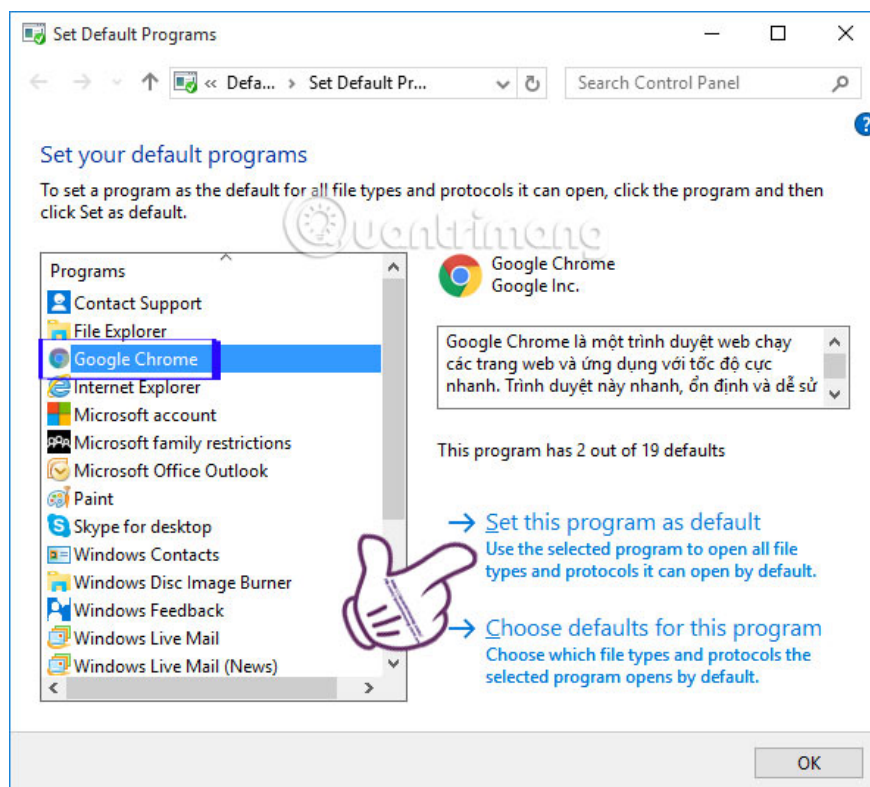

In the left menu of the next interface, we navigate to the **Default apps** section . Look to the right of the interface, scroll down and select **Set defaults by app** .

Step 4:

Soon, you will be redirected to the **Set Default Programs** window. Here on the left side of the interface will be a list of applications available on your computer. We choose an application that we want to set as default.

For example, here I will choose Chrome browser as the default browser on Windows 10 computer. Right below there will be 2 options, we will select the item **Set this program as default** , to install Chrome as the browser default. Finally click **OK** to save.

This operation we have installed the application through the Control Panel without going through Settings as before. This will resolve errors related to users not being able to install the default application or browser on Windows 10. Readers can apply this fix when unable to set the default application with the version Other Windows operating.
