The situation of icons on the desktop being converted to lnk is what makes many computer users feel a headache. TipsMake guides you how to fix it in detail!

Normally, icons on the desktop will be displayed in different shapes. This makes it easy for us to search and use. However, there are cases where icons on the desktop are all converted to lnk and have the same appearance. At this time, the process of using the computer will encounter many inconveniences.

So what exactly caused **the icons on the desktop to be converted to lnk extensions** ? Let's go to the main content of the article below with **TipsMake to get a specific answer to this question.**

Why are the icons on the desktop converted to lnk?

If you have experience using computers, you will know that it is inevitable that computers will encounter errors during use. Of course, there are quite simple errors and there are also very serious and annoying errors. In the case of icons on the desktop being converted to lnk, we will have the following main causes.

1/ Due to user error

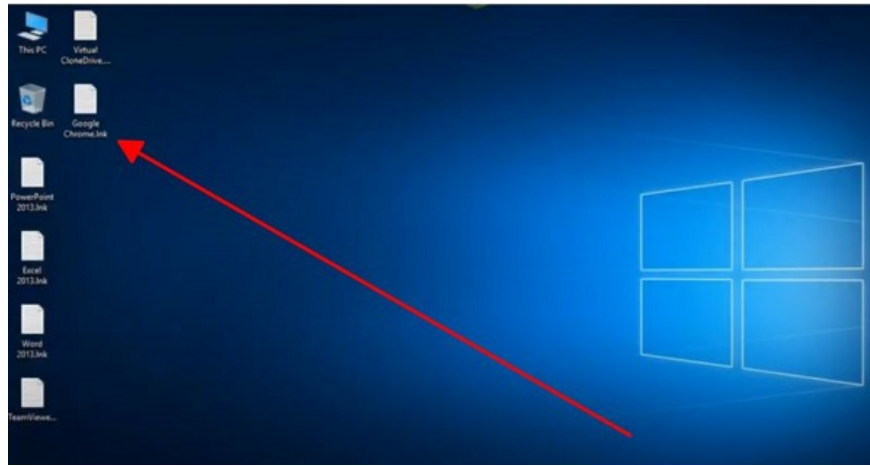

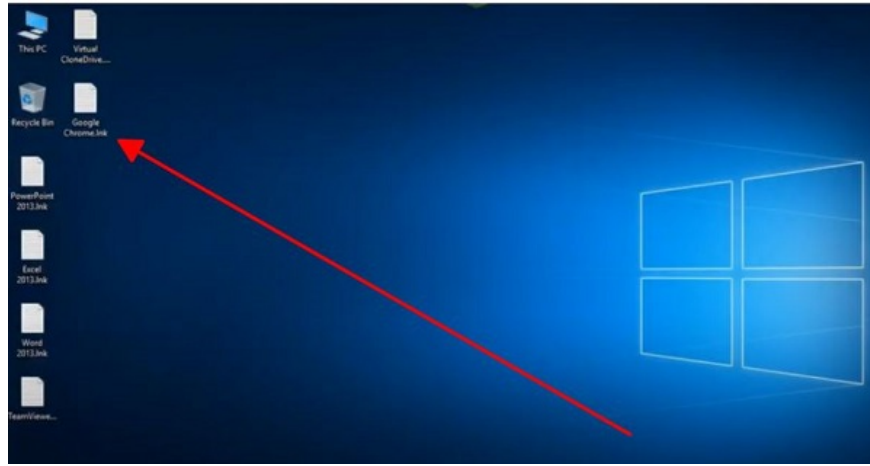

Currently, computer users can intervene quite deeply into the computer's system settings. This makes it easier to manage and use the computer. However, if we make changes to the settings without careful research, it is very likely that the computer will fail. This is also considered the leading cause of files being changed to lnk on the computer.

2/ Due to virus

As you know, viruses are one of the leading causes of computer errors. When you encounter a file with the lnk extension changed. It is very likely that your computer has been attacked by a malicious virus.

3/ Software error

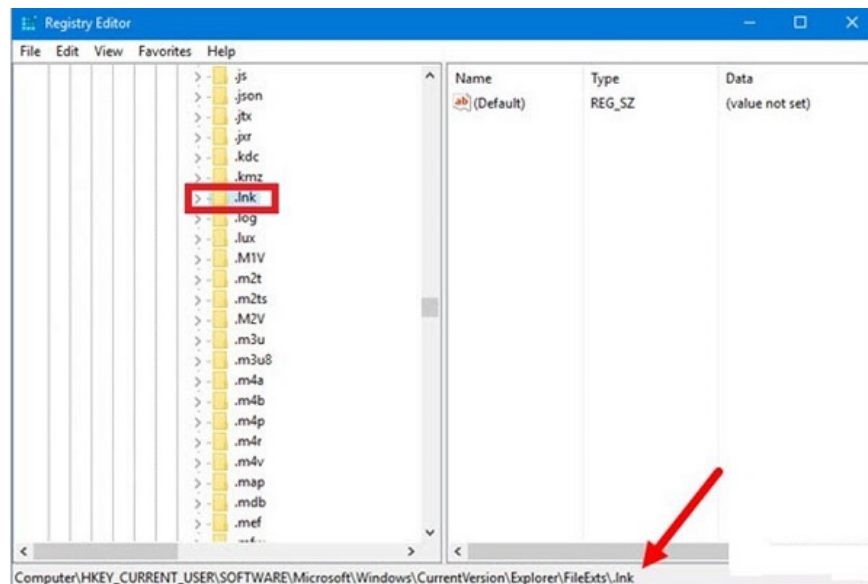

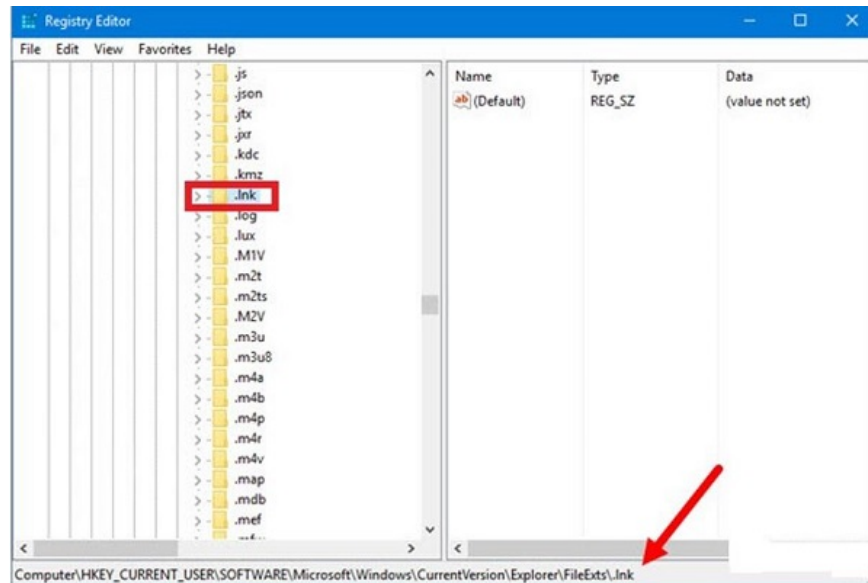

Finally, the situation where the icons on the desktop are converted to lnk extensions may be due to problems with the software on the computer. The main cause in this case may be that the user installs and uses incompatible software or conflicts occur during use.

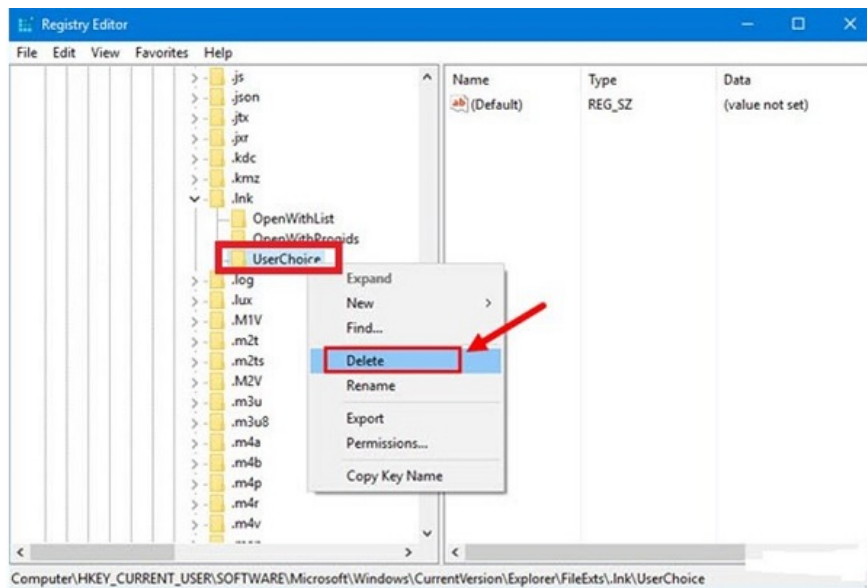

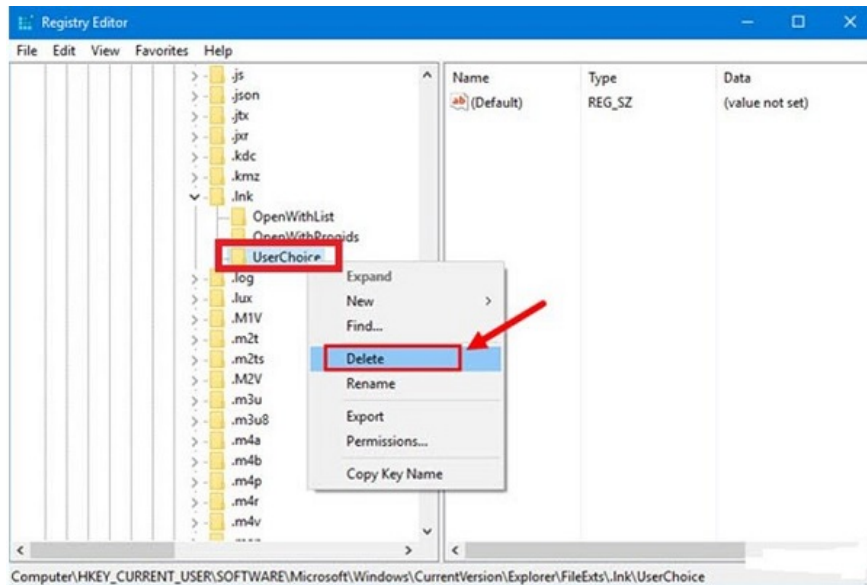

Instructions on how to fix when the icon on the desktop is converted to lnk extension

When encountering a file being changed to lnk, many people feel worried and do not know how to handle it. Many people even think about reinstalling Windows for their computers. However, according to the information I have found, this is not a very complicated error and you can fix it with the following method.

1. **Step 1** : Press Windows + **R** then type regedit and press **Enter** .
2. **B2** : At this point, a window will appear and what you need to do is find the path below.
HKEY_CURRENT_USERSoftwareMicrosoftWindowsCurrentVersionExplorerFileExts.lnk

1. **B3** : After selecting .lnk, you will see 3 files: **OpenWithList**, **OpenWithProgids** and **UserChoice** . Now, you need to do the following:
 1. Go to the OpenWithList file, delete all items and leave the **Default item) REG_SZ (value not set** .
 2. Go to the OpenWithProgids file and delete all entries and leave the entries **(Default) REG_SZ (value not set) ' and 'lnkfile REG_NONE (zero-length binary value) ' .**
 3. Finally, delete the **UserChoice** file completely because this is the file that causes the error (normal computers will not have this file).

1. **Step 4** : After completing the above steps, you just need to close the program, restart your computer and enjoy the results.
