

# How to fix the insufficient memory error on the printer the easiest

Guide you to fix the error of insufficient memory on the printer, full of memory on the printer is one of the common errors that printer users often encounter.

This error usually occurs when the user is printing documents on the printer, the error message **insufficient memory printer appears** . This error indicates that the printer does not have enough memory to complete the printing process. Usually, the way to solve this problem that people often do is to add more memory to the printer for further use.

However, in addition to the above way, in this article, I will introduce you to more methods to fix the error of not enough simple memory that I will guide below.

## I. Change the feature Download TrueType font

First, try to apply the method of changing the **Download TrueType font** feature on the printer with the following steps:

Picture 1 of How to fix the insufficient memory error on the printer the easiest

**Step 1:** You press *Windows + R* key combination to open the Run dialog box. Then enter the *control* term and click *OK* to open the **control panel**.

**Step 2 :** Here, you click on *Hardware and Sound -> Devices and Printers*.

**Step 3:** Right-click the name of the printer you are using and select *Properties* , then click *Printing Preferences*.

**Step 4:** Next, click *Layout -> Advanced* . Here, double-click on the PostScript option.

**Step 5 :** Click the ***TrueType Font Download Options option***. There, click the *Auto* button .

If the Auto option is already selected, click the Outline or Bitmap option.

**Step 6:** Now save your changes and close the Printer Properties and Control Panel dialog boxes, then check if the error has been fixed.

## II. Reset the printer to factory settings

With this method, I will apply on all HP brand printers.

The steps are as follows:

Picture 2 of How to fix the insufficient memory error on the printer the easiest

**Step 1:** From the main screen on the Printer Control Panel, swipe down until the *Setup* menu is displayed and then click the *Setup* icon .

**Step 2:** Scroll down the menu and select *Service ? Restore Defaults*.

**Step 3:** Now click *OK* to confirm the operation above. Now the printer will reset to default and reboot.

## **Printer settings**

**Step 1:** Click the Start menu and select *Settings -> Devices*.

**Step 2:** From the menu in the left pane, click on the *Printers and Scanners* line .

**Step 3:** Click Next to *add a printer and scanner*. You then continue with the on-screen instructions to complete this setup.

After completing the steps above, try reprinting and checking if the error is resolved.

## **III. Change the printer driver**

To change the printer driver, visit the HP printer support software site [here](#) to search and download the **PCL5 / HP Driver** for Windows computers.

After downloading, please install the driver and try to use the printer to check for errors.

If your printer is using the **PCL6** driver , use the **PostScript or PCL5** driver version . By doing this, some users have reported that changing the printer driver has helped them resolve this error already.

## **IV. Remove and reinstall the printer driver**

The process of removing and reinstalling the printer driver will include the following steps:

### **1. Delete the connection with the printer**

**Step 1:** Click the Start menu and select *Settings ? Devices*.

**Step 2:** Select the *Printers and Scanners* tab from the menu on the left.

**Step 3:** Now select the printer you are using from the list of connected devices and click the *Remove Device* button to remove the device.

## 2. Uninstall the printer software

**Step 1:** Click the Start menu and select *Settings > Apps*.

**Step 2:** Here, search for your printer or application name. Then, click on the printer's software and click on *Uninstall* button . Then click the *Yes* button to confirm this action.

**Note:** This method only works best when you perform a complete uninstall of the printer software. Therefore, if possible, use a third-party uninstaller to best remove any leftover data from those settings.

## 3. Remove the printer driver from Printer Server Properties

**Step 1:** Click the Start menu and select *Settings > Devices*.

**Step 4:** In the box *Remove Driver And Package*, click on the line *Remove driver and driver package* and click *OK* to continue.

**Step 5:** Click the *Delete* button to confirm this operation.

## 4. Reinstall the printer driver

Error of insufficient memory on the printer can be handled by resetting the printer to factory defaults. However, if you've done the above methods and the problem persists, try changing the driver or resetting the printer.

Try downloading the latest driver version for your printer by visiting the manufacturer's software support website.

Then download and install the driver and check for new updates and see if the error is resolved.

So I have shown you how to fix the error of insufficient memory on the printer the easiest way. Hopefully this article will be helpful to you. I wish you successful implementation!
