Table of Contents:

Method 1: Ensure your computer's audio is turned on .

Method 2: Ensure you haven't muted the video .

Method 3: Browse in incognito mode .

Method 4: Use a different browser .

Method 5: Increase the volume on the Volume Mixer .

Method 6: Update your audio driver .

Method 7: Use the Audio Troubleshooter to fix the no sound issue in YouTube videos .

How to fix the no sound issue when watching YouTube videos

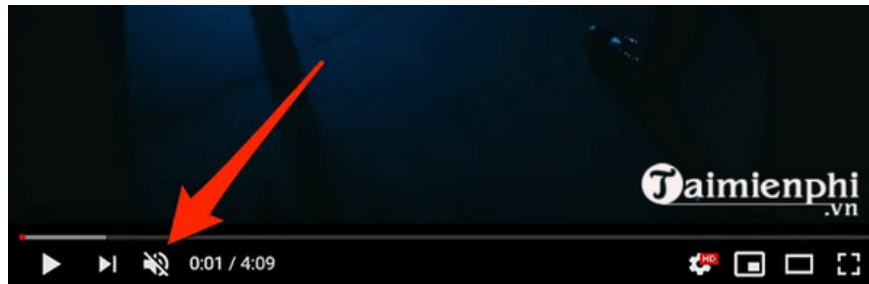

Method 1: Make sure the sound on your computer is turned on.

Sometimes, the reason for the lack of sound when watching YouTube videos might be that you accidentally muted the sound on your computer or device without remembering.

To fix the problem, check if the speaker icon in the system tray has an **X** on it. If it does, the speakers are muted. Simply turn the speakers back on, or increase the volume and see if you can hear the YouTube video.

Method 2: Make sure you don't mute the video.

If you watched the previous video with the sound muted, all subsequent videos will also be muted, causing a sound loss issue when watching videos on YouTube.

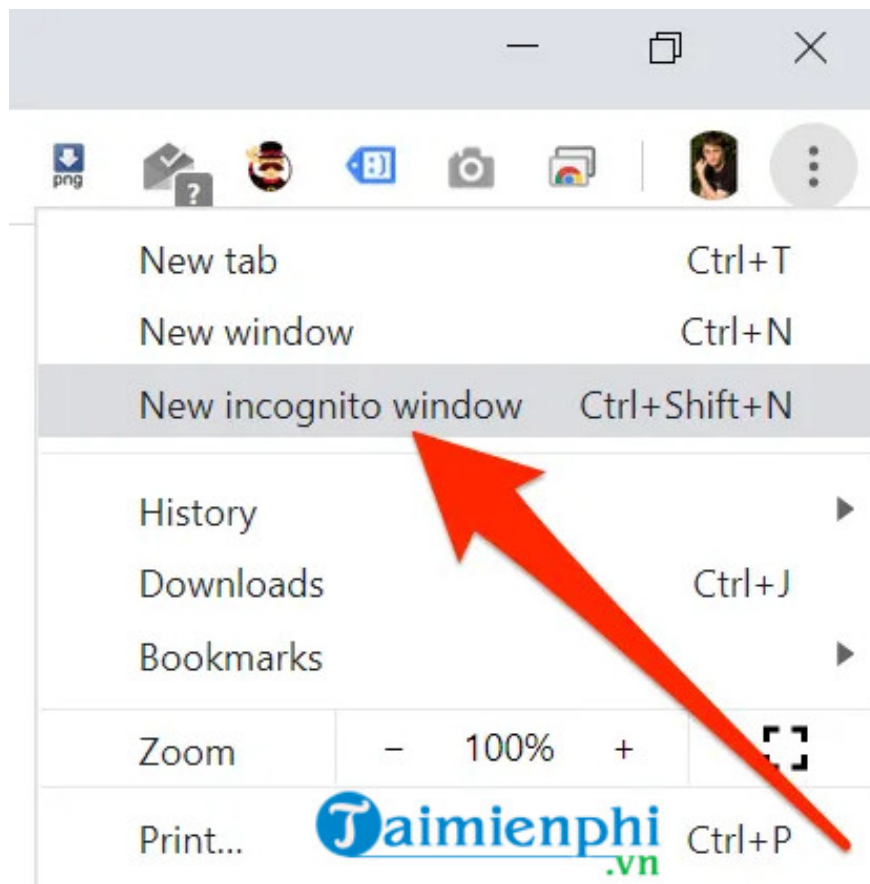

On the YouTube video you're watching, click the speaker icon to unmute the sound, or use the **M** shortcut key to mute/unmute the video on YouTube.

Method 3: Browsing in incognito mode

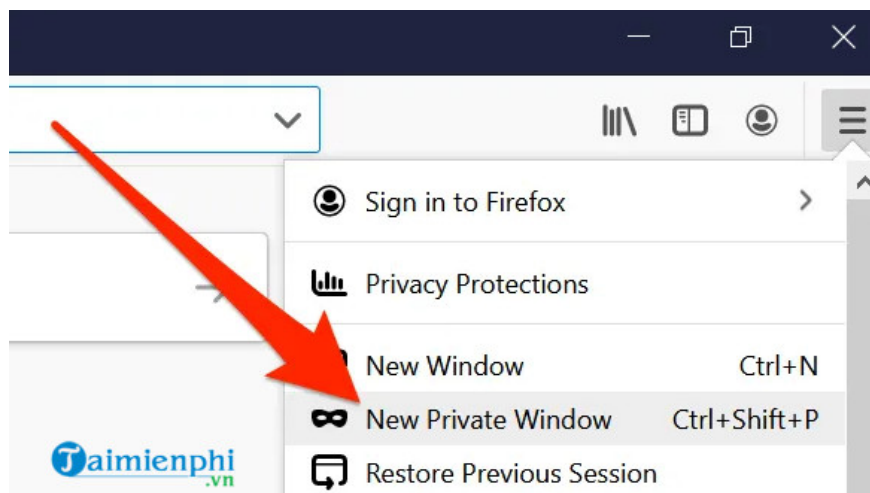

Audio-related issues and errors are often due to system configuration. However, sometimes the cause of these errors can also be due to browser issues or errors, such as an overloaded browser cache, etc.

To fix the issue of no sound when watching YouTube videos, try browsing in incognito mode and reopening the YouTube video to see if the sound is now available. When browsing in incognito mode, all browsing history and cache files are cleared.

- **In the Chrome** browser , click the three vertical dots icon in the upper right corner of the screen, then select "**New Private Window**". Next, open the YouTube video and check if there is sound.

- In the Firefox browser , click the three horizontal lines icon in the upper right corner, then select **New Private Window** .

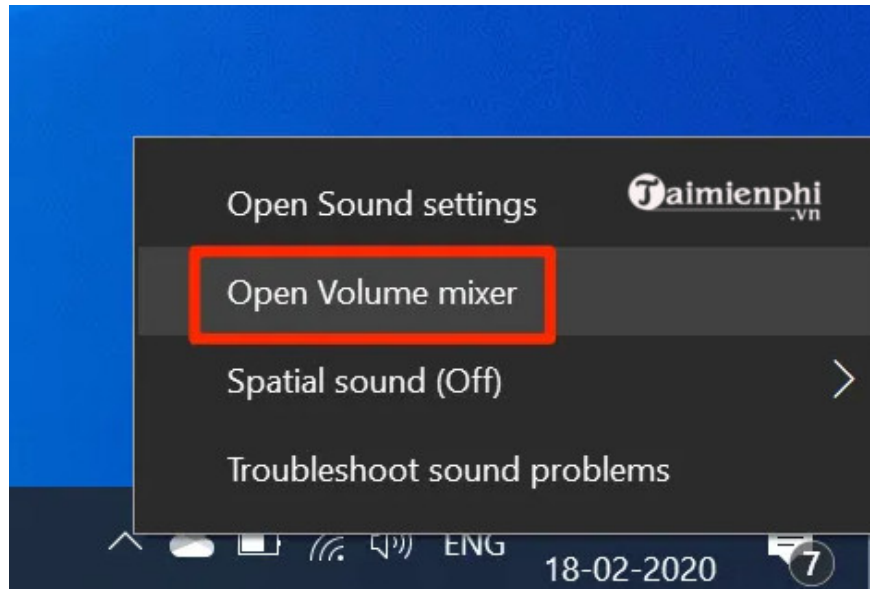

Method 4: Use a different browser

If the issue of the sound not cutting out on YouTube videos persists even when browsing in incognito mode, try using a different web browser to open the video and see if the problem remains.

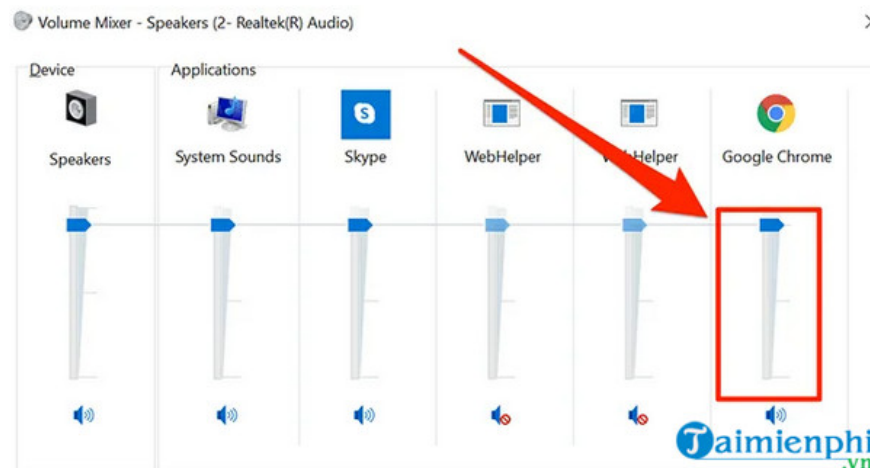

Method 5: Increase the volume on the Volume Mixer

Step 1: Find and right-click the speaker icon in the system tray, then select **Open Volume Mixer**.

Step 2 : In the window displayed on the screen, under the **Applications** section, you will see the volume settings for each application. Make sure your web browser is open.

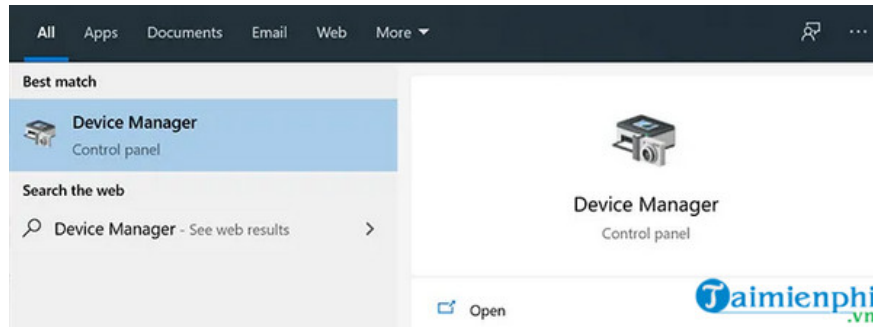

Step 3: Find your browser, then drag the slider up to increase the volume.

Finally, check to see if you can hear the YouTube video.

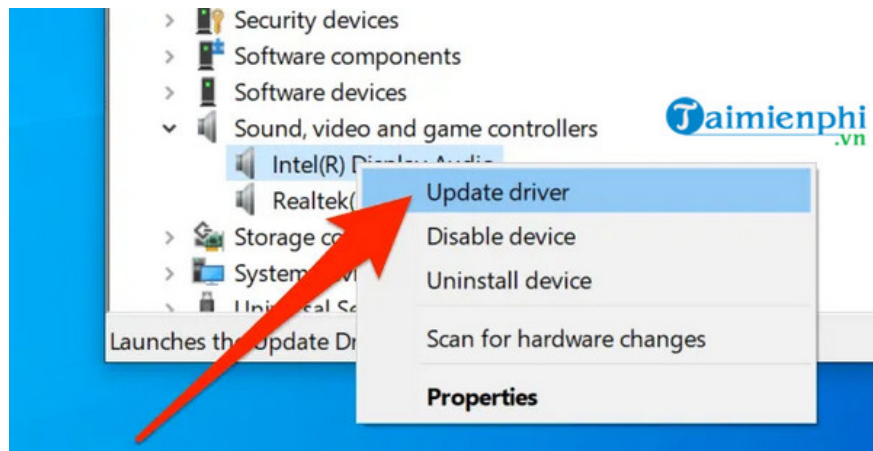

Method 6: Update your audio drivers.

Step 1 : Type "**Device Manager**" into the Search box on the Start Menu to open the window.

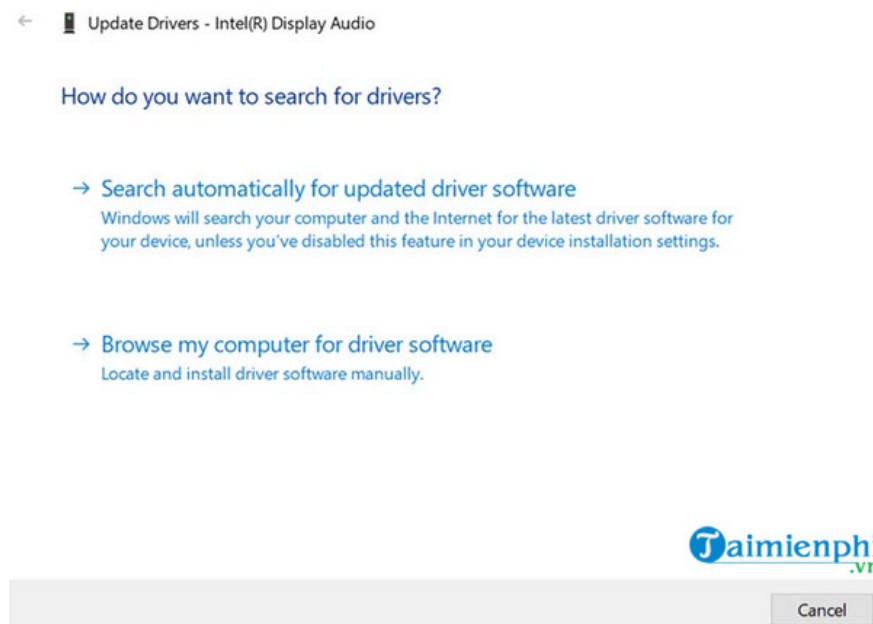

Step 2 : In the Device Manager window, find and expand the **Sound, video, and game controllers** section.

Step 3 : Find your sound card, right-click on it, and select **Update driver**.

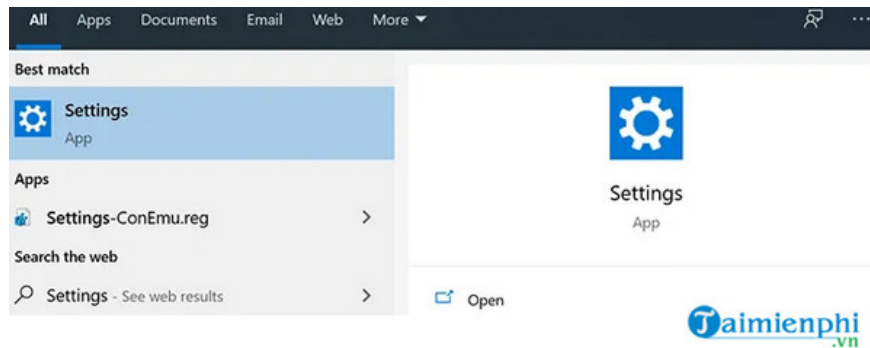

Step 4: In the next window, select the option to automatically update the driver or browse the driver files on your computer.

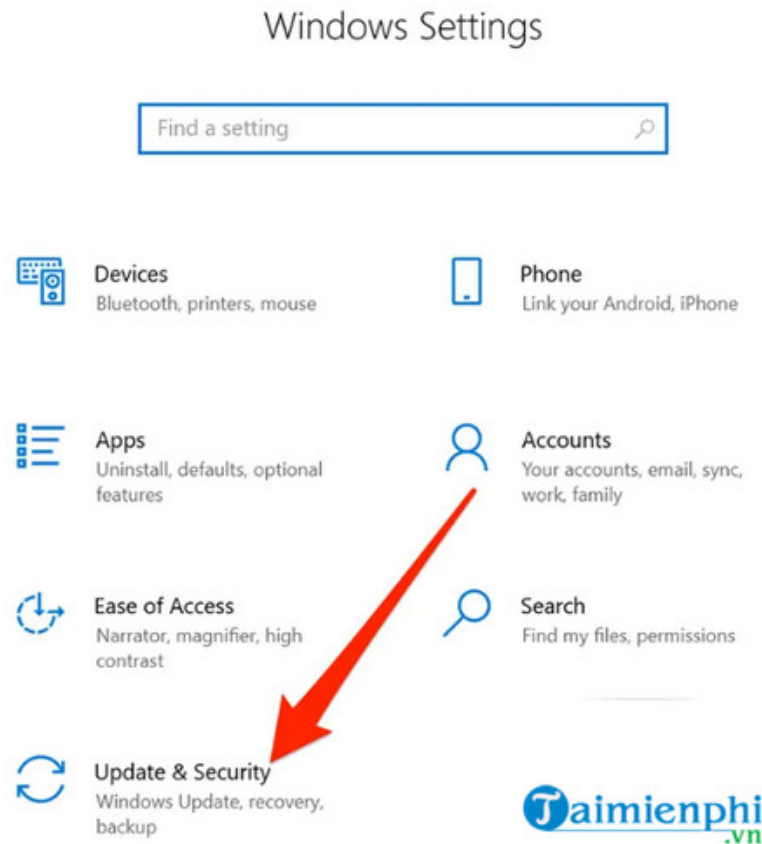

Step 5: Wait until the driver update process is complete, restart your computer, and check if the YouTube video has sound.

Method 7: Use Audio Troubleshooter to fix the no sound issue in YouTube videos.

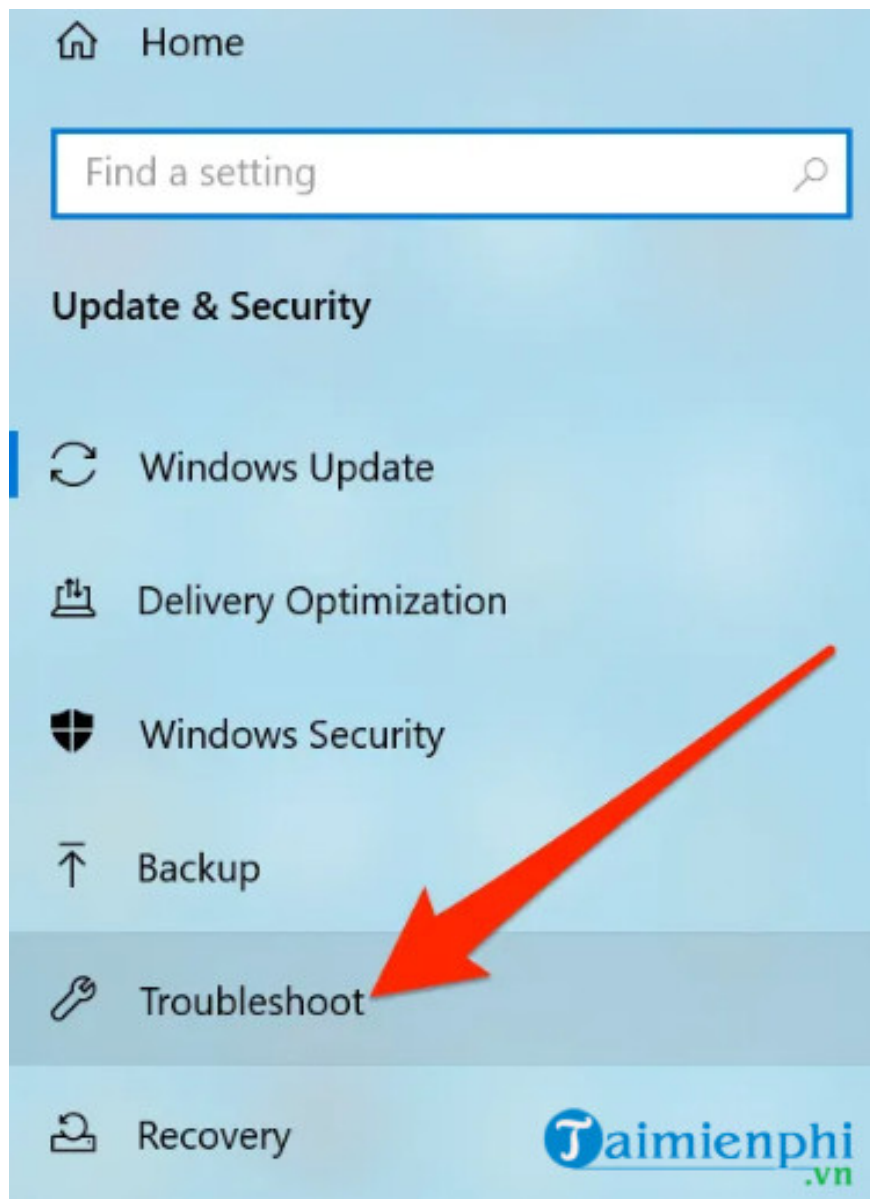

Step 1: Open the Settings window by typing "**Settings**" into the Search box on the Start Menu.

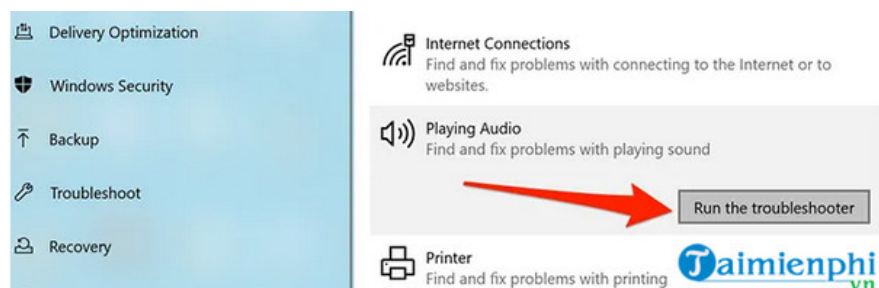

Step 2: In the Settings window, find and click on **Update & Security**.

Step 3 : Select **Troubleshoot** in the left pane.

Step 4: In the right-hand pane, scroll down to find and click on **Playing Audio** => **Run the troubleshooter** .

Step 5: Wait until the tool runs and fixes the error for you.
