

How to fix the problem of losing the Taskbar under the screen when browsing the web

The toolbar (Taskbar) displayed under the screen makes it convenient to operate, but your computer loses the toolbar below the screen when accessing the web. Click to see how to fix it now!

Sometimes, your computer appears to lose the toolbar (Taskbar) under the screen when browsing the web. This makes the operation inconvenient and wants to find a way to fix this situation. This article will show you how to fix the error of losing the toolbar below the screen when accessing the web easily. Follow along!

Toolbar or Taskbar is the taskbar located below the computer screen, laptop. This is the location to display the icons of the applications and software that you set up for quick access, as well as display the programs in use.

Users may experience the error of losing the toolbar below the screen when accessing the web browser, even though it is normal outside the desktop. However, the way to fix this error is extremely simple.

1. Check and exit full screen mode

Full screen mode when browsing the web can cause toolbars and taskbars to disappear.

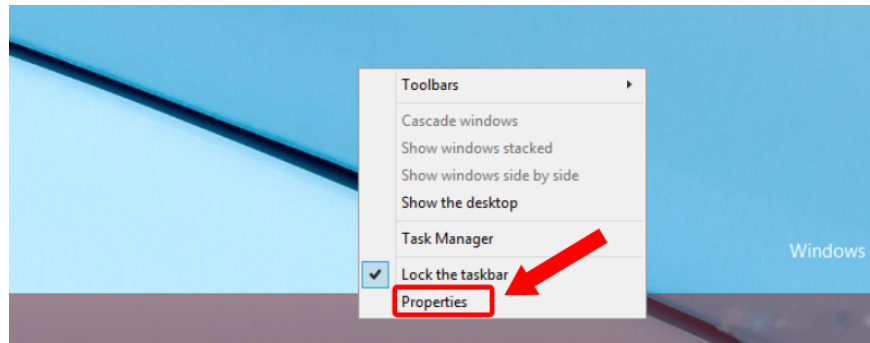

Try to check if the device is in full screen mode. If so, just press the F11 key (or the Fn + F11 key combination, depending on the model) to exit full screen mode.

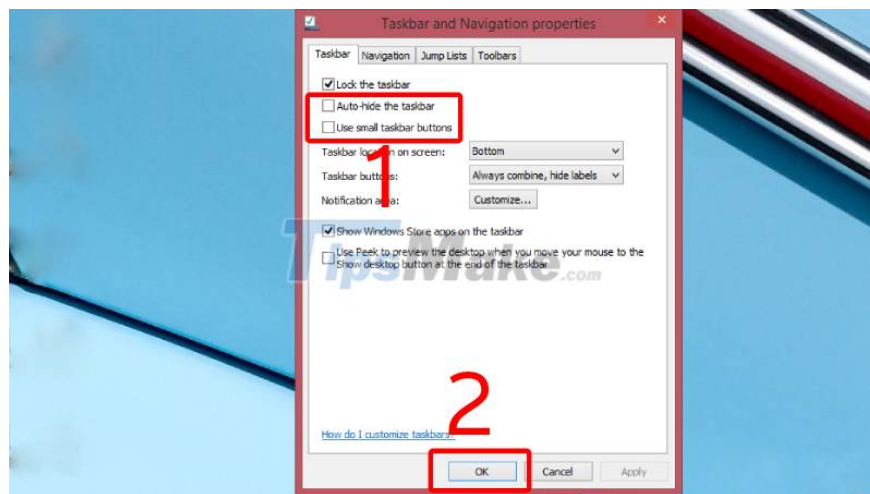

2. Turn off auto-hide Taskbar mode

Maybe in the process of using, you have accidentally switched the Taskbar to auto-hide mode, so please check and turn off auto-hide mode if it is enabled.

Step 1: Drag the mouse down to the bottom of the screen to show the Taskbar, then right-click the Taskbar > Select Properties.

Step 2: In the Taskbar section, uncheck the two Auto - hide the taskbar and Use small icon items > Select OK.

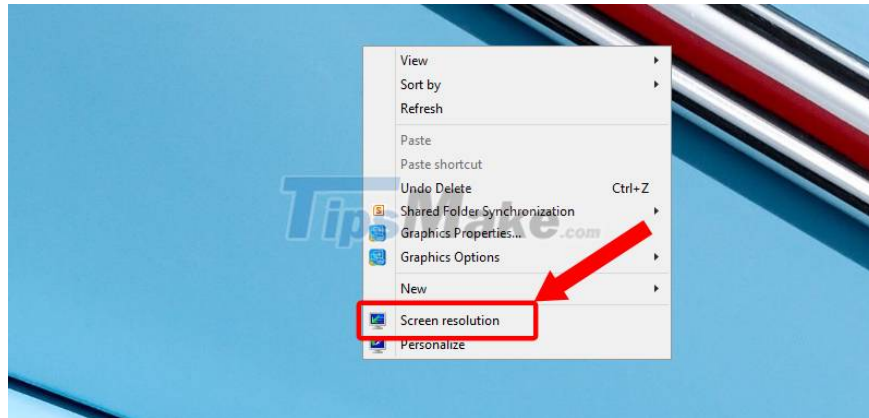

3. Reset the computer screen

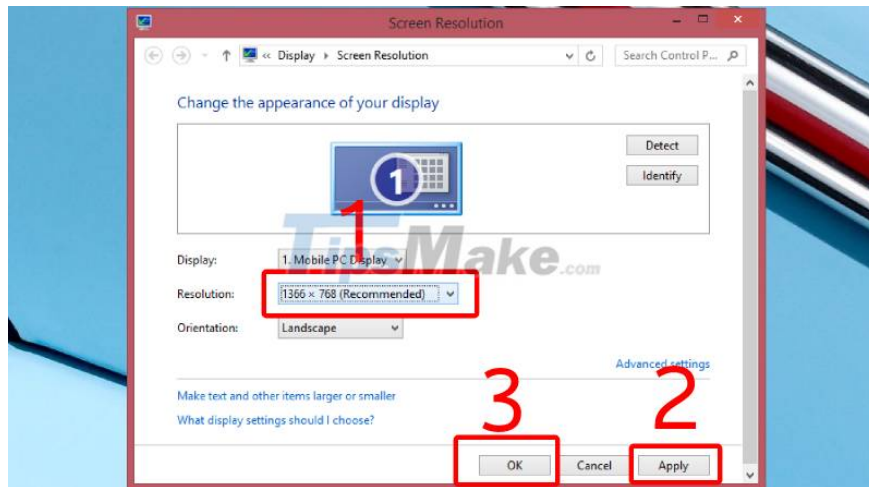

The fact that you often connect your computer to a projector, TV, . to share the screen will cause the size and resolution to change, making users think that there is an error that does not show the taskbar when accessing the web. Therefore, you should reset the computer screen to fix the error.

Step 1: Right-click on the Desktop > Select Screen Resolution.

You can also access Screen Resolution by: Press Windows + I key combination to open Settings > Select System > Select Display tab > Select Display resolution.

Step 2: In the Resolution section, select Recommended mode > Click Apply > Select OK.

4. Restart the computer

The slight screen conflict can also cause the error to lose the toolbar (Taskbar) under the screen, then, try restarting the computer to fix this error.

Hopefully the above guide will help you fix the error of missing the toolbar below the screen when accessing the web. Good luck in fixing the error. Thanks for watching!
