

How to fix the problem of not being able to adjust laptop screen brightness.

With the following methods for fixing the problem of not being able to adjust laptop screen brightness, we hope you can easily adjust your laptop screen brightness, thereby extending battery life and protecting your eyes during frequent use.

Still struggling to figure out how to fix the problem of not being able to adjust your laptop screen brightness? Read on for more details in this article from TipsMake.

How to adjust laptop screen brightness and extend battery life.

Fixing the issue of not being able to adjust laptop screen brightness.

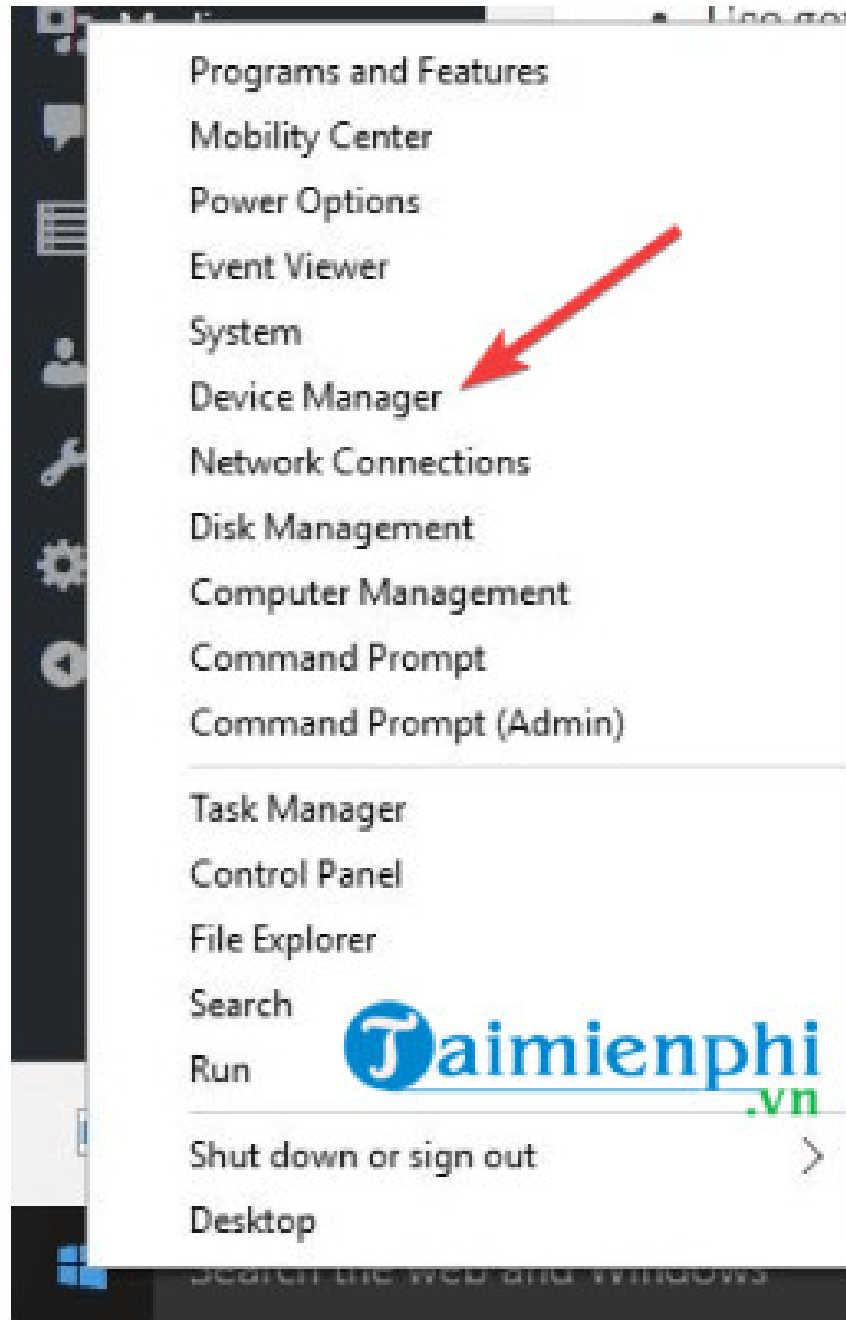

There are many reasons why you might not be able to adjust the screen brightness on your laptop, including system errors, malfunctions, or Windows updates, etc.

To fix this error, a temporary solution is to restart your laptop and check if the error persists.

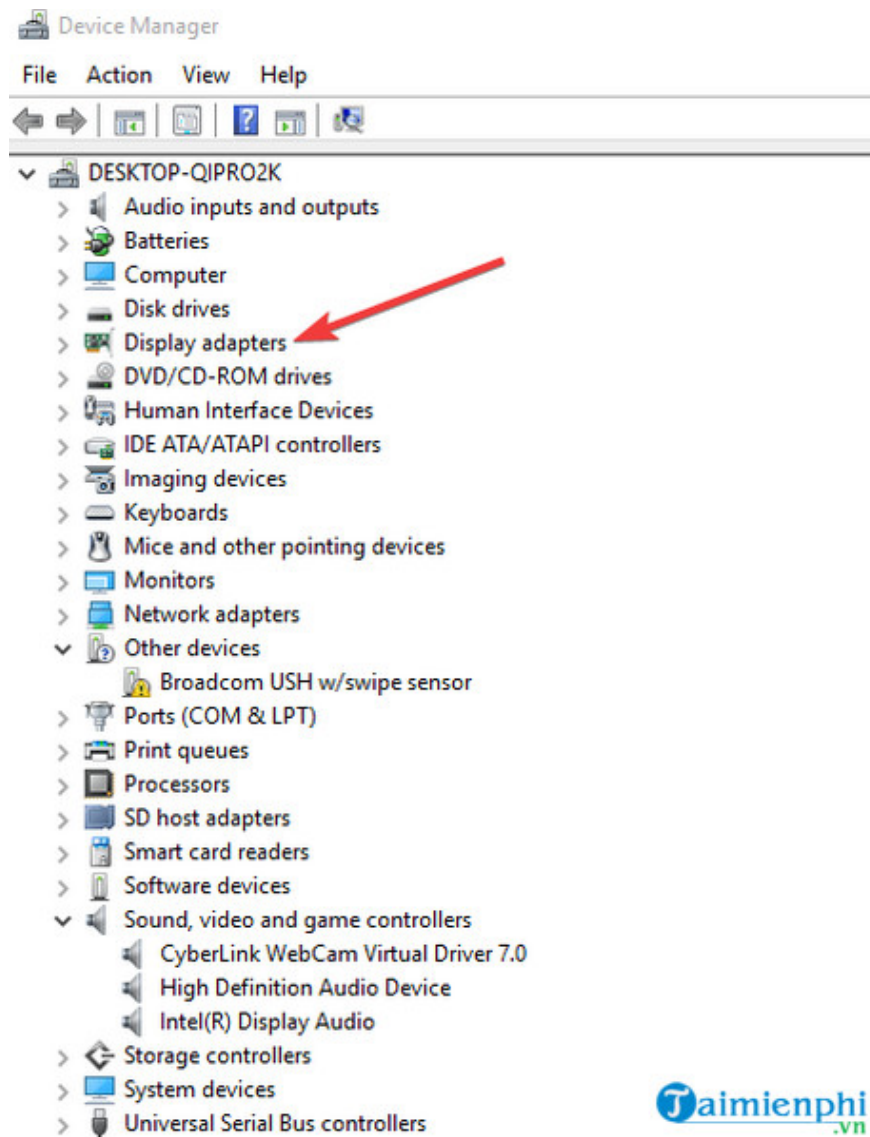

If the error persists, please refer to the troubleshooting steps below:

Method 1: Update the Display Adapter driver.

Step 1: Right-click the **Start button** and select **Device Manager** .

Step 2 : Find and expand the **Display Adapters** section.

Step 3: Right-click on the Display Adapter shown in the list and select **Update Driver Software** .

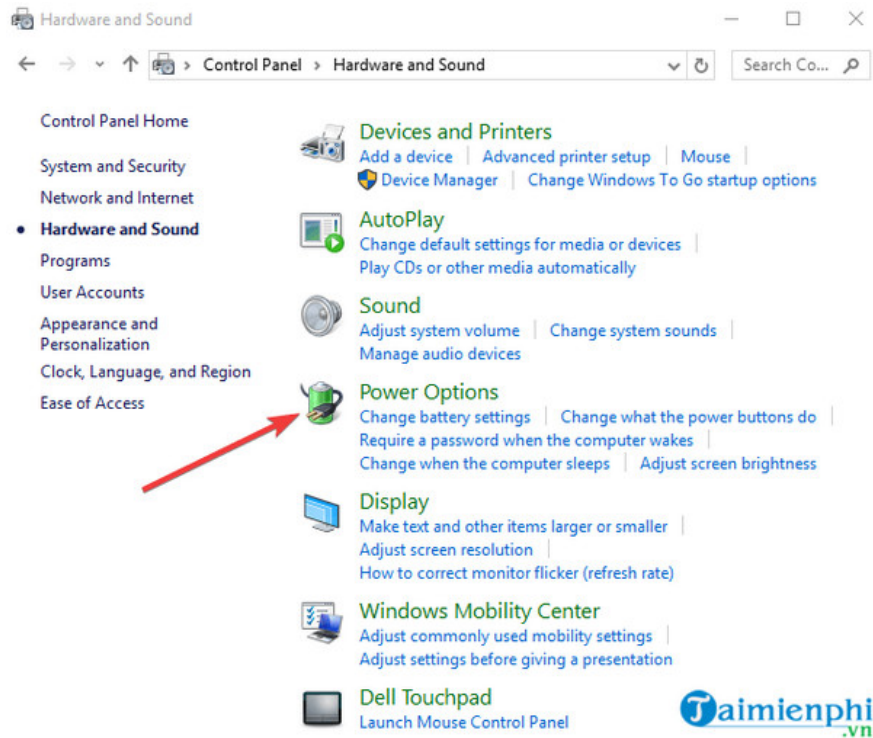

Step 4: Select the option **Automatically search for the updated driver software**.

Step 5: Finally, restart your laptop to apply the changes and check if the error persists.

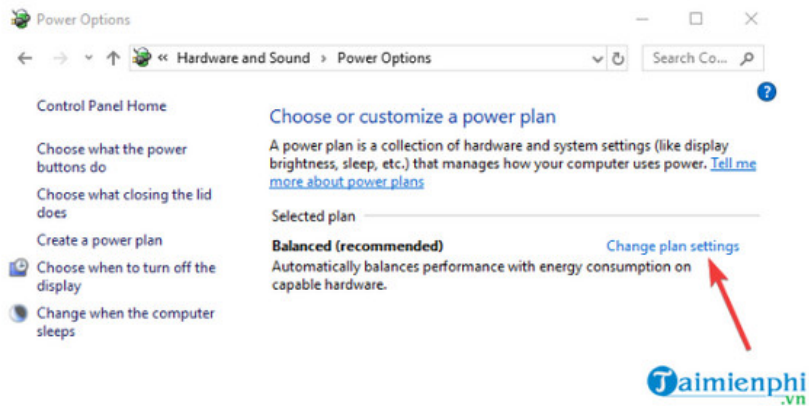

Method 2: Activate the Adaptive Brightness feature.

Step 1 : Open the Control Panel window.

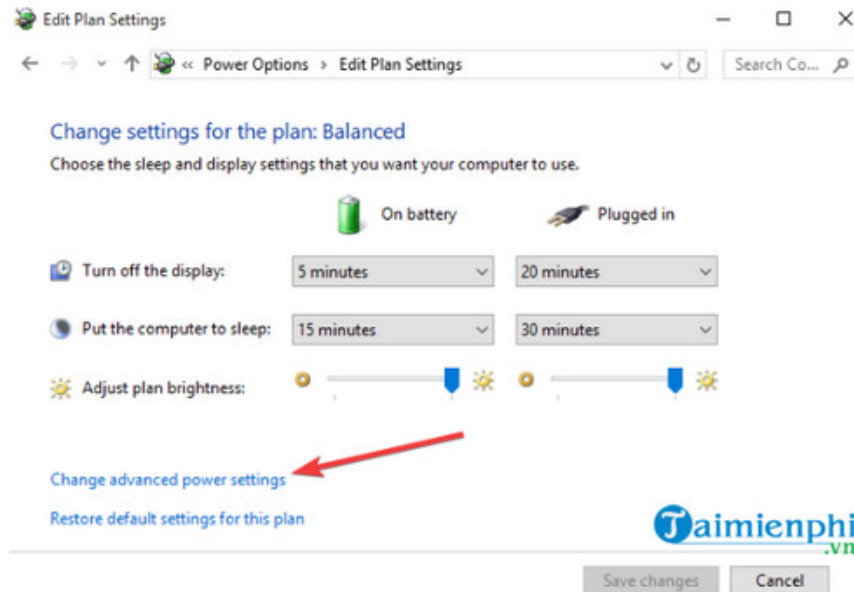

Step 2: In the Control Panel window, find and click **Power Options** .

Step 3 : Click on **Change plan settings** next to the power plan you are currently using.

Step 4: Click on **Change advanced power settings** .

Step 5: In the next window, click on **Display**.

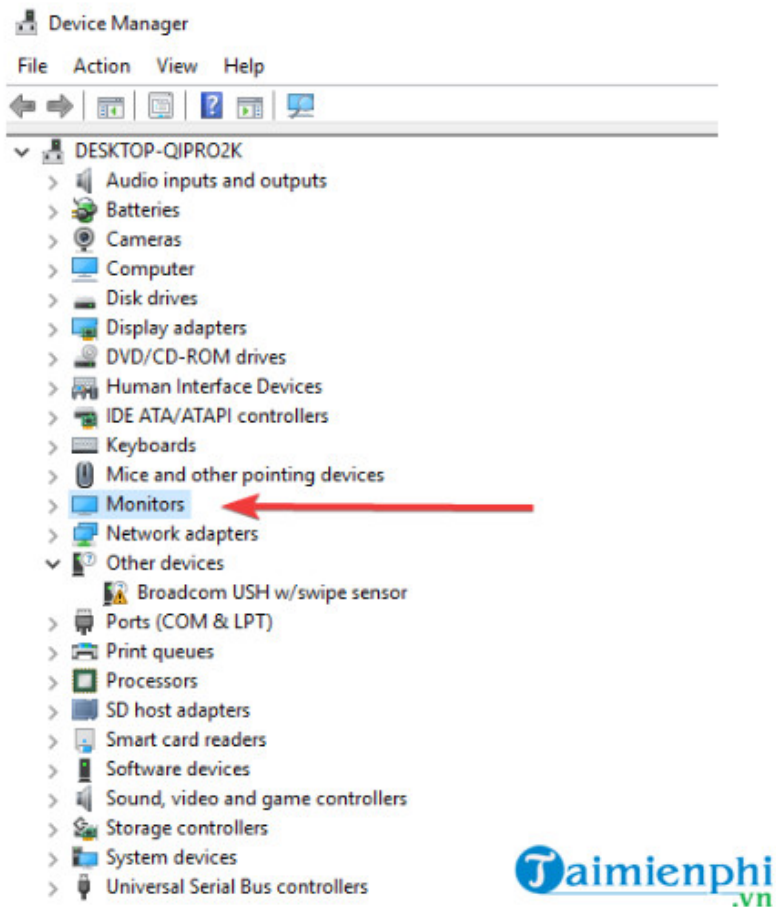

Step 6 : In the window displayed on the screen, find and change the values ??of the **Display brightness**, **Dimmed display brightness** , and **Enable adaptive brightness options**.

Step 7 : Click **Apply** => **OK** and check if the laptop screen brightness has been adjusted.

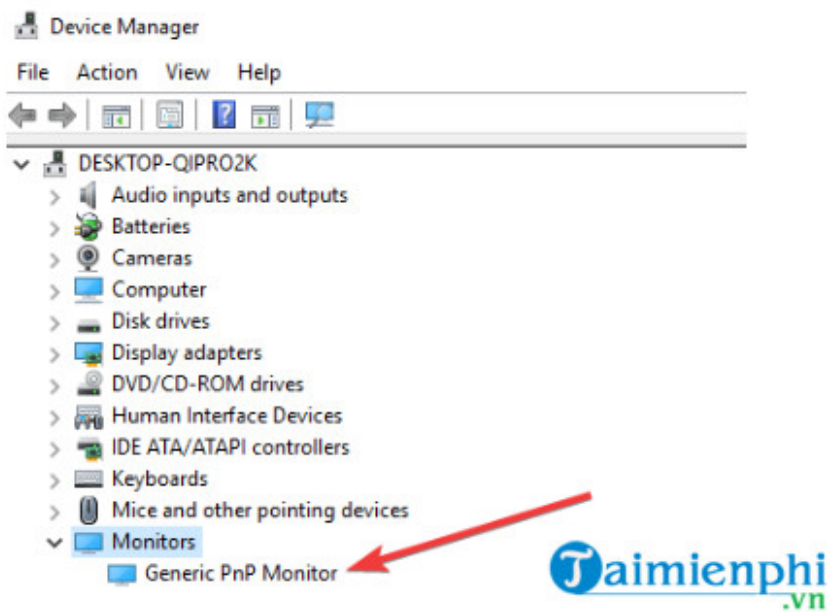

Method 3: Activate PnP Monitor

Step 1 : Right-click **the Start button** and select **Device Manager**.

Step 2 : In the Device Manager window, find and click **Monitors** .

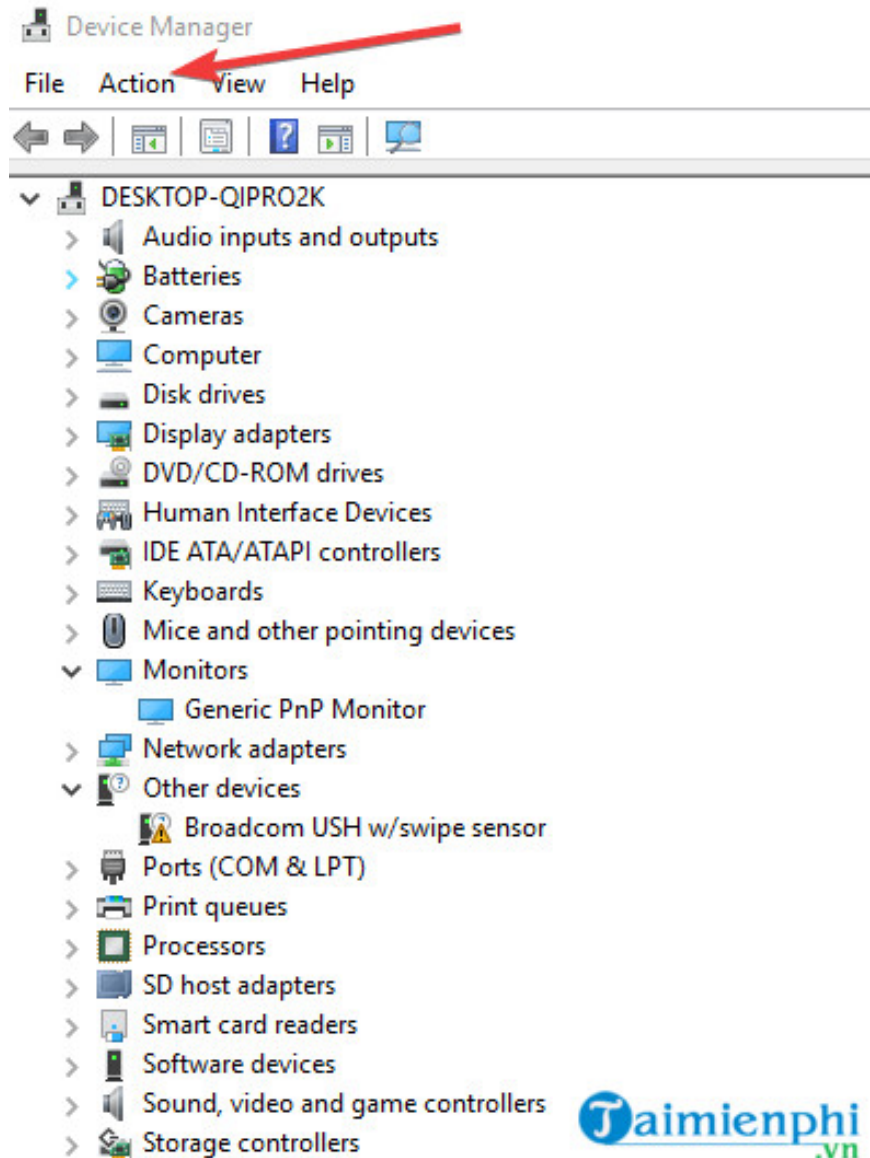

Step 3 : Find and right-click on **Generic PnP monitor** to check if the option is enabled.

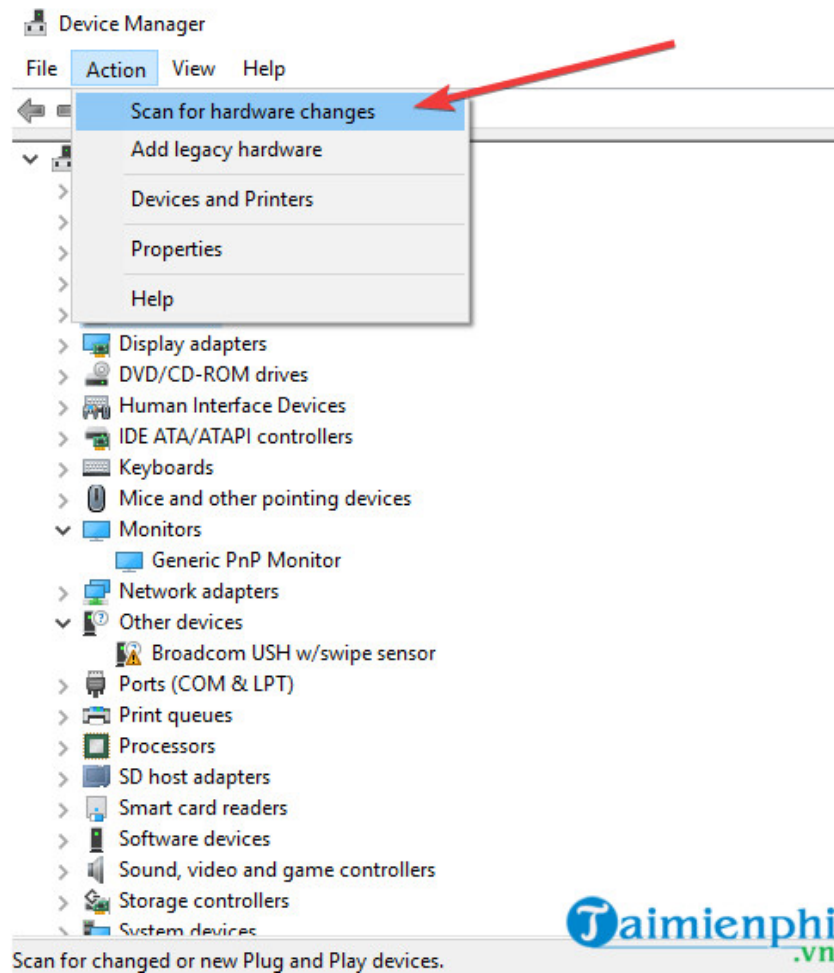

Step 4 : If it's not already enabled, click on **Enabled device** to activate it.

Step 5: Click **the Action tab** located in the upper corner of the Device Manager window.

Step 6: Select **Scan for Hardware Changes**.

Step 7 : Wait until the scanning process is complete and check if the error persists.

If the above methods don't yield positive results, another option is to try updating the Registry and see if the error persists.

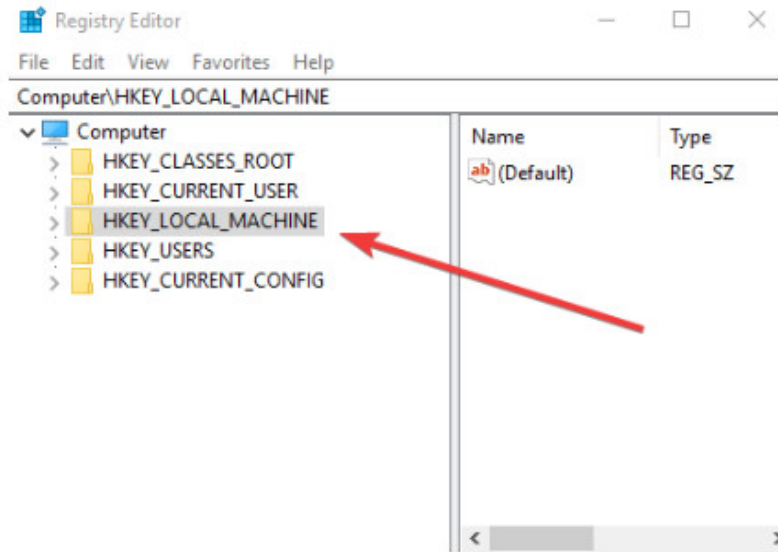

Note: This method involves modifying the Registry, so TipsMake recommends backing up your system beforehand to avoid any potential problems.

Next, follow the steps below:

Step 1 : Open the Run window by pressing **Windows + R** , then type **regedit** and press **Enter** to open the Registry Editor window.

Step 2: In the Registry Editor window, navigate to the following path:

HKEY_LOCAL_MACHINE\SystemControlSet001Control

*Step 3: Set the value in the value data field of the **Class{4d36e968-e325-11ce-bfc1-08002be10318}000** and **FeatureTestControl** options to **0000ffff**.*

Finally, check if the error persists.

Finally, if you've tried everything and nothing works, it's time to consider seeking help from laptop repair centers.
